	Synthetic reconstruction of the morphology of OBGT VII.	121

Prefatory Note.

This essay, which elaborates upon my earlier articles Huber (2007)^[11], (2008)^[12], is not on Sumerian grammar (or at least only indirectly so). It represents my attempts to understand the Old Babylonian understanding of Sumerian grammar and the methodological differences between their way of operating and ours. It is based on a limited selection of texts, namely on a closely knit collection of cuneiform bilingual verbal paradigms. I have made a considerable effort to extract the grammatical structure, *as it was understood by the Babylonians*, from these texts alone. Methodologically, the initial steps of this analysis relied on mechanically matching Akkadian grammatical features with Sumerian graphemes, and these were then followed by efforts to identify and interpret mismatches and exceptions. In rare cases I had to borrow semantic information from modern grammars and dictionaries. But I should stress that the structural information presented in this essay was extracted from the paradigms alone.

I felt it interesting and worthwhile to contrast the OB interpretations with the modern understanding of the same features, especially when the two diverged. Some Sumerologists have objected to my conclusions because they contradicted, or seemed to contradict, evidence derived from the unilingual text corpus. The question is: whose interpretation is wrong: mine, the Babylonians', or the modern Sumerologists'? Or are we talking about slightly different languages, say a theoretical learned version underlying the OB scholarly tradition, and the language prevalent in the unilingual text corpus?

I gratefully acknowledge the help and in particular all the critical comments I received from a large number of Sumerologists – from Pascal Attinger to Gábor Zólyomi – even if I sometimes decided to disagree with them, and I also thank the Oriental Institute of the University of Chicago for providing me with superb photographs of their OBG T texts. Of course, I assume personal responsibility for any errors and misrepresentations.

1 Introduction.

Modern science – more precisely: the modern presentation of science – follows the discursive style inspired by Greek role models such as Aristotle, Euclid and Ptolemy. Pre-Greek learning does not know this style, it relies on lists, examples and recipes. In early philosophy (“wisdom literature”) the principal vehicles of communication were proverbs and parables, in mathematics exemplary solutions of selected problems, and in astronomy the so-called procedure texts. In the Sumerian and Old Babylonian philology of the late third and early second millennium BC we have lexical lists, collections of stock phrases, and most remarkably, a number of sophisticated bilingual verbal paradigms.

While collections of stock phrases merely demonstrate knowledge of the languages, the paradigms go beyond: they demonstrate active linguistic interest in the grammatical structure of these languages. The paradigms come about as close to comparative linguistics as is possible within a non-discursive approach. In distinction to traditional comparative linguistics, which operates within a family of related languages, we have here a structural comparison of unrelated languages: Sumerian is an agglutinating language without known cognates, Akkadian is an inflecting Semitic language.

In addition, the paradigms make possible a second type of comparison, namely between modern and ancient grammars, formalizing (supposedly) the same languages. Grammars are extrapolations of structures gleaned from often sparse data. In the case of modern grammars of Sumerian – with the exception of the monumental but limited work of Falkenstein (1949)^[8] – those data consist of a synchronic and diachronic hodge-podge of original unilingual documents. In the case of the Old Babylonian grammatical texts we do not know on what data they were based. Did the OB grammarians still have access to native speakers of Sumerian, or did they rely on a scholarly oral tradition, or did they lean on original written sources like their modern colleagues? Modern Sumerologists tend to reject contrary evidence from the Old Babylonian grammatical texts out of hand. But there is a tantalizing question: where do the sometimes considerable differences originate? From extrapolation errors (on either side) or from differences in the underlying languages?

I shall discuss only such features as can be inferred from the paradigms, but I shall try to put them into the context of modern grammars, and I shall concentrate on the features about which their views diverge. I should emphasize once more that structural features were extracted from the paradigms alone, consciously ignoring modern grammars of Sumerian. For semantic information, however, I felt free to look beyond, if necessary. In particular, this concerns the meaning of the comitative case “with”, and the interpretation of the Sumerian dichotomy between /n/ and /b/ as between person and non-person, a dichotomy which does not exist in Akkadian and for which the paradigms substitute a dichotomy between definite and indefinite.

2 The overall structure of the paradigms.

The inductive analysis of the paradigms turned out to be a very tangled tale. It extended over many iterations, borrowing insights from one paradigm to assist the analysis of another. While I allowed myself to make free use of our knowledge of Akkadian, the analysis was rendered rather difficult and tortuous by my insistence not to let what we know from unilingual “true” Sumerian influence my conclusions. I would have liked to give a full, step-by-step presentation of my analysis, but initial drafts showed this to be impractical and confusing. I therefore shall attempt to simplify and streamline the presentation by first giving a general overview of the structure of the paradigms and the grammatical structures derived from them in Sections 2 to 7, followed by separate analyses of individual paradigms in Sections 8 to 10, a discussion of open questions and unclear forms in Section 12, and shall end with a summary and the main conclusions in Section 13. Some repetitions are almost unavoidable.

2.1 The texts.

The relevant paradigms are published in MSL IV (1956)^[18] as OBGT VI-X. These five texts form a closely knit group. They throw a sharp spotlight on a narrowly focused aspect of Sumerian grammar: verbal morpho-syntax. Closely related material can be found in the Ur Excavation Texts UET 7 and in a unilingual OB paradigm (N3513+N3592) from Nippur, see Black (1991: 137-143, 155-158)^[3]. All these texts have been treated extensively by Black and more recently by Huber (2007)^[11], (2008)^[12]. I do refrain from an analysis of the other OB grammatical texts published in MSL IV, except that I occasionally shall draw on OBGT III-V to elucidate or complement features observed in OBGT VI-X.

In Appendix A to the present essay I reproduce the texts OBGT VI-X and N3513+N3592 with minor corrections. I have supplemented them with English translations and a structural analysis of the Akkadian forms. While my grammatical analysis extensively quotes extracts from that Appendix, the reader is urged to view not only the extracts, but also their surroundings and how the discussed forms are imbedded in the paradigms.

I have adjusted the transliterations of MSL IV to current fashions but have eschewed typographically awkward characters, such as \hat{g} . In principle I would have preferred the fuller versions of alternative transliterations of the same cuneiform signs (dug_4 over du_{11} , sub_2 over su_8), since they stay closer to Sumerian morphology. How closely the transliterations approximate the pronunciation preferred by the OB grammarians of course is an open question. I was more reluctant than Black to emend the texts, but have corrected some improper restorations proposed in MSL IV.

On the tablets, those paradigms are arranged in parallel columns, with Sumerian forms on the left and Akkadian ones on the right. The paradigms are subdivided into paragraphs, that is, into groups of a few consecutive lines of text, separated by a horizontal dividing line. The internal structure of these paragraphs is based on Akkadian conjugation. Most paragraphs have 3 lines, in the order: 3rd, 1st, 2nd person subject. With non-indicative forms, the order is reversed: imperative(2nd), volitive(1st), precative(3rd).

The main paradigms contain a total of 873 lines (VI: 227, VII: 318, VIII: 91, IX: 163, X: 74), and roughly one line in 25 contains a recognizable (and correctible) scribal error. There may be more unrecognized errors.

Table 1 should give an impression of the layout of these paradigms. The text on the tablet is highlighted.

OBGT VII. Non-indicative forms: imperative, volitive, precative					Akk. structure
§1	1	gen-am ₃	<i>al-kam</i>	come!	– G V Ni
	2	ga-am ₃ -gen	<i>lu-ul-li-kam</i>	may I come!	
	3	ḫe ₂ -em-du	<i>li-il-li-kam</i>	may he come!	
§2	4	gen-am ₃ -še	<i>al-ka-aš-šum</i>	come to him!	3D G V Ni
	5	ga-am ₃ -ši-gen	<i>lu-ul-li-ka-aš-šum</i>	may I come to him!	
	6	ḫe ₂ -em-ši-du	<i>li-li-ka-aš-šum</i>	may he come to him!	
§3	7	gen-am ₃ -mu-še	<i>al-kam a-na še-ri-ya</i>	come to me!	1D G V Ni 2D 2D
	8	ga-mu-e-ši-gen	<i>lu-ul-li-ka-ak-kum</i>	may I come to you!	
	9	ḫe ₂ -mu-e-ši-du	<i>li-li-ka-kum</i>	may he come to you!	
§4	10	gen-am ₃ -ma	<i>at-la-kam</i>	come away!	– Gt V Ni
	11	ga-am ₃ -ma-gen	<i>lu-ut-ta-al-kam</i>	may I come away!	
	12	ḫe ₂ -em-ma-du	<i>li-it-ta-al-kam</i>	may he come away!	
§5	13	gen-am ₃ -ma-še	<i>at-la-ka-aš-šum</i>	come away to him!	3D Gt V Ni
	14	ga-am ₃ -ma-ši-gen	<i>lu-ut-ta-al-ka-aš-šum</i>	may I come away to him!	
	15	ḫe ₂ -em-ma-ši-du	<i>li-it-ta-al-ka-aš-šum</i>	may he come away to him!	
§6	16	gen-am ₃ -ma-mu-še	<i>at-la-kam a-na še-ri-ya</i>	come away to me!	1D Gt V Ni 2D 2D
	17	ga-am ₃ -mu-e-ši-gen	<i>lu-ut-ta-al-ka-ak-kum</i>	may I come away to you!	
	18	ḫe ₂ -em-mu-e-ši-du	<i>li-it-ta-al-ka-ak-kum</i>	may he come away to you!	
§7	19	gen-ni	<i>a-lik</i>	go!	– G – Ni
	20	ga-gen	<i>lu-ul-lik</i>	may I go!	
	21	ḫe ₂ «-en»-du	<i>li-il-lik</i>	may he go!	
§8	22	gen-en-ši	<i>a-lik-šum</i>	go to him!	3D G – Ni
	23	ga-en-ši-gen	<i>lu-ul-lik-šum</i>	may I go to him!	
	24	ḫe ₂ -en-ši-du	<i>li-lik-šum</i>	may he go to him!	
§9	25	gen-ba	<i>at-la-ak</i>	go away!	– Gt – Ni
	26	ga-ba-gen	<i>lu-ut-ta-la-ak</i>	may I go away!	
	27	ḫa-ba-du	<i>li-it-ta-la-ak</i>	may he go away!	
§10	28	gen-ba-ši	<i>at-la-ak-šum</i>	go away to him!	3D Gt – Ni
	29	ga-ba-ši-gen	<i>lu-ut-ta-la-ak-šum</i>	may I go away to him!	
	30	ḫa-ba-ši-du	<i>li-it-ta-la-ak-šum</i>	may he go away to him!	

Table 1. The first ten paragraphs of OBGT VII (taken from the Ur recension, UET 7, 100). They cover Non-indicative forms (Ni): imperative, volitive, precative. An analysis of the Akkadian structure is given on the right: Person and case of the object, Akkadian stem (G or Gt), ventive or non-ventive. Line 21 contains a scribal error, the expected ḫe₂-du is given in the parallel texts.

2.2 The underlying grid structure.

Some of the texts, in particular OBGT VII and OBGT VI+X, have a clearly recognizable underlying grid structure. It would be a gross oversimplification to consider either the Sumerian or the Akkadian column of these paradigms as a translation of the other. The relationship is more complicated, and it is necessary to treat the two columns as a composite whole. We note first that the grids of the paradigms are constructed on the basis of the Akkadian two-case system, not on the much richer Sumerian system. Thus, both the Sumerian and the Akkadian forms are filled into an Akkadian-based template. This would seem to imply that the translation is from Akkadian to Sumerian. In Appendix A, my structural analysis, as given in the rightmost columns, reflects the Akkadian forms, while my English translations try to render the somewhat richer Sumerian ones.

However, the grids are supplemented by didactic inserts that highlight Sumerian features not fitting into the Akkadian straitjacket of the grids. For such inserts, the translation would go in the opposite direction. I have called those inserts “didactic”, but this is speculation, derived from the natural assumption that the paradigms originate out of the Sumero-Babylonian school system.^{1,2} It is tempting to speculate on the reasons why OB grammarians should have added particular inserts, and I rarely can resist to do so.

Thus, some grammatical features are immanent in the layout of the grids, for example the systematic separation of the conjugation prefixes (Section 9.1), while others are shown more subtly through inserts.

Given that the grids are based on Akkadian, it seems appropriate to refer to the tenses by the names “present” and “preterite” customary in Akkadian grammars, and to avoid the approximately coextensive Akkadian(!) terms *marû* (“fat”, “slow”) and *hamtu* (“quick”, “swift”). These terms are used in some Babylonian grammatical lists to distinguish between different Sumerian verbal bases that translate to the same Akkadian verb; they may suggest a dichotomy between durative and punctual, rather than between tenses. See also Section 11, which offers evidence that the “present” relates to an unfinished or future action, and the “preterite” to a finished action.

We shall see below that in OBGT VII, covering the verb “to go”, the Akkadian present tense corresponds to the *marû* bases *du* (sg.) and *su₈* (pl.), the preterite to the *hamtu* bases *gen* (sg.) and *re₇* (pl.). But the complexity of the situation is illustrated by the fact that the volitive uses the *hamtu* bases, the precative the *marû* bases, and the imperative uses the single base *gen* both for singular and plural. The different choice of bases indicates that Sumerian in the case of this verb makes morphological and semantic distinctions that have no correspondence in Akkadian. Thus we have VII§7: *gen-na* = *alik* = “go!”, *ga-gen* = *lullik* = “may I go!”, *he₂-du* = *lillik* = “may he go!”, VII§40: *gen-na-an-ze₂-en* = *alka* = “go(pl.)!”, *ga-re₇-en-de₃-en* = *i nillik* = “may we go!”, *he₂-su₈-be₂-eš* = *lilliku* = “may they go!”^[18]. To complicate matters, the cuneiform script uses the same sign DU both for *du* and *gen*, and the

¹ A persuasive argument in favor of such an origin is furnished by the last 27 lines of OBGT IX. These give non-indicative forms of 9 different verbs, in the usual order (imperative, volitive, precative). Black (1991: 12)^[3] writes: “It is impossible not to feel that the selection of verbs used here, especially *be₅* [= *tešûm* “to shit”] and *dur₂-dur₂* [= *šarātum* “to fart”], reflects a schoolboyish humour on the part of the compiler.”

² A passage of an OB letter to the *ummiānum* (“scholar”, “teacher”) gives a direct connection between the school and the grammatical paradigms: *ana E₂.DUB.BA.A i-ir-ru-um-ma* GA₂.NU *aštanassi u ka-am-mi ša* GA₂.NU *ša tēzibam uṭāb* “I(?) will enter the school and read the composition (beginning with) *ga₂-nu* and I will correct the tablet of the *ga₂-nu* which you left” (TLB 4 84, AbB 3 no.84), here quoted after CAD K 125-126, s.v. *kammu*. I owe this reference to D. Foxvog, who in turn credits M. Civil. There can be no doubt that *ga₂-nu* here references the first word of the OI recension of OBGT VII, which I had restored [*ga₂-nu-um*] after the plural form *ga₂-nu-u[m-z]_{e₂}-en* (VII§34). But note that the texts of ETCSL^[7] consistently render “come!” by *ga₂-nu*, suppressing the final *m*.

composite sign DU+DU both for *su*₈ and *re*₇. The distinction resides in the context and in phonetic complements and becomes visible in the plural. For example, *su*₈ before vowels is pronounced with a final *b* (*su*₈ = *sub*₂ being alternative transliterations of the same sign), resulting in contrasting writings such as *-re*₇-*en*- and *-su*₈-*be*₂-. OBGT VI and X use a single base throughout, while VIII and IX use *hamtu* /*du*₁₁/ in the preterite, *marû* /*e*/ in the present tense. Confusingly, in non-indicative forms the choice of *marû* and *hamtu* bases is inconsistent: mostly *hamtu*, but compare VIII§11 with IX§21, see Section 10.4.2.

Recognition of the underlying grid structure, combined with the subsequent analytic separation of the inserts from the systematic grid, was the crucial ingredient for the understanding of these paradigms. What made such a separation possible, was my discovery that the paradigms OBGT VI and X share the same underlying grid, while VI has additional inserts. See OBGT X in Appendix A for the connection. The existence of an underlying strict grid structure had escaped Black (1991: 12-14)^[3], who had described the two paradigms as “diffuse”. Similarly, one recension of OBGT VII has several inserts that are absent in another. In the absence of oral comments by a teacher, the non-discursive presentation would have otherwise made it rather difficult to discern the grid structure, and with it the grammatical structure, intended by the Old Babylonian grammarians.

Systematic grids generate extended lists of supposedly grammatically correct forms (inevitably including also unusual ones). Remarkably, some of the OB grids are complete subject to circumscribable limitations. It may be worthwhile to point out that such grids can be considered as early antecedents of what modern linguists have called generative grammars, see Chomsky (1965: 8)^[5]: “... by a generative grammar I mean simply a system of rules that in some explicit and well defined way assigns structural descriptions to sentences.”

2.3 Implied goals of the paradigms.

Each paradigm seems to be targeted toward specific issues of Sumerian verbal morpho-syntax: VII deals with an intransitive verb; it is concerned with the directional prefix and is the unique paradigm treating plural subjects and objects. VI and X deal with transitive verbs; they exercise the so-called conjugation prefixes and the pronomial prefix chain. VIII and IX treat transitive and intransitive constructions of two-part transitive verbs.

The paradigms give the impression that they were designed to illustrate specific, sticky issues of Sumerian verbal morpho-syntax (as understood by OB grammarians) – most of them controversial in modern grammars based on unilingual “true” Sumerian texts (Thomsen (1984)^[21], Attinger (1993)^[2], Edzard (2003)^[6], Michalowski (2004)^[17], Jagersma (2010)^[15]).

2.4 Normative systematization?

I must stress that it is not clear whether these paradigms represent any “true”, spoken or written Sumerian of that time or rather a synthetic, overly systematized Old Babylonian conception of Sumerian, which then was dying out as a spoken language. Apart from that, the paradigmatic approach inevitably necessitates some normative systematization. A possible argument in favor of systematization (also on the Akkadian side!) is that the paradigms seem to favor “theoretical” interpretations over “lexical” ones. For example, the Akkadian *t*-infix theoretically expresses a change of direction, but the precise meaning is lexical and depends on the verb; it ranges from separative and reciprocal to reflexive and others. The Akkadian dictionaries leave open questions about the meaning of the *t*-stems of the verb *kašādum* “to reach”, occurring in OBGT IV and IX. We cannot expect that the mechanical matching of Akkadian *t*-stems with the Sumerian /*ba*/-prefix, as used in the paradigms,

and my schematic rendering of them by “away”, match the lexical details of the two languages. However, there are a few conspicuous exceptions, namely stative/passive constructions where /ba/ is matched with causative Akkadian Š-stems (Sections 9.3 and 9.4.1), and an insert, where it is matched with passive Akkadian N-stems (Section 9.4.3). Also a curious construction occurring in IX§11 must be mentioned, where the Akkadian separative t-stem apparently is matched with the Sumerian ablative case marker /ta/ (Section 9.4.4).

There are some reasonably strong arguments against over-systematization in the paradigms OBGT VI-X under scrutiny. For example, the elision of the 3rd person pronoun /n/ before the case markers, while widespread, is seemingly unsystematic (compare the morphology and the text columns in Appendix B). Second, the use of both morphemic and phonetic spellings (such as *gen-am₃* versus *ga₂-nam*). And third, there are other grammatical texts that appear to be more schematic than OBGT VI-X. For example, OBGT VII writes the terminative /ši/ only with singular indirect objects and uses a different, seemingly unmarked case with plural objects. But another text from Nippur, N3513+N3595 (see Appendix A), concerned with the same verb *gen/du* = *alākum* = “to go”, uses /ši/ both for the singular and the plural. Plural use of /ši/ may represent normative systematization. Note that Thomsen (1984: 229)^[21] does not know of attestations of /ši/ in the plural, while Attinger (1993: 209-210)^[2], who quotes grammatical texts, and Edzard (2003: 93)^[6] do. Edzard considers his unique example a mechanical extrapolation from the much more frequent singular forms (p. 98).

But possible concerns about artificiality and normative over-systematization do not really matter. These paradigms are the earliest serious grammatical documents, and as such relevant for the history of science, and their richness is absolutely fascinating. They are hardly known outside of Sumerological circles, and they deserve some wider publicity. The closer one looks, the more astonishing it is into what details a sophisticated non-discursive approach can advance, despite its intrinsic limitations (in particular difficulties when dealing with grosser discrepancies of grammatical structures between the two languages).

3 Comparing widely different languages.

A side effect of the non-discursive, paradigmatic nature of the presentation is that only such structural features can be dealt with effectively as have approximate correspondences in both languages. It is interesting to see how the OB grammarians cope with this problem, and the subterfuges they use.

For example, Akkadian distinguishes two genders, male–female, and assigns grammatical gender to inanimate things somewhat arbitrarily. Sumerian has a different two-way split, variously, but inaccurately, analyzed by modern authors as animate–inanimate, or as human–non-human, or as person–non-person. The 3rd person morphemes are /n/ for person and /b/ for non-person.

The paradigms approach this as follows. First, they simply omit female pronouns. Second, they use a surrogate split: definite–indefinite, choosing the 3rd singular suffixed Akkadian pronoun (accusative *-šu*, dative *-šum*) for rendering the personal /n/, and no pronoun for rendering /b/. In actual language use, this comes quite close to a person–non-person split: in an Akkadian sentence context a personal pronoun almost inevitably is definite, since it refers to a person mentioned beforehand. On the other hand it also agrees with the Sumerian use of /b/ for unspecified persons (corresponding to the English use of “someone” in the singular, “they” in the plural).

In short: the paradigms never render a Sumerian morpheme /b/ by an Akkadian pronoun. But they consistently use *-šu*, *-šum*, if the morpheme /n/ is the leading element in the pronomial chain. The seeming exceptions are cases where the morpheme /bi₂/ has been changed to *ni* by dissimilation after labial + vowel, see Section [9.2.3](#).

One should keep in mind that there is a fundamental difference between how Akkadian and Sumerian verbal pronouns are used in the sentence context. At least in principle, the Akkadian pronomial suffixes are true *pro-nouns*, used as substitutes for the nouns to which they refer, while the Sumerian pronomial prefixes pick up and recapitulate relationships expressed in the nominal part of the sentence (cf. Sollberger 1952: 61-62)^[20].

Sumerian verbal forms can express many more nuances than Akkadian ones. The paradigms contain instances where three or four Sumerian forms are rendered by a single Akkadian form, see Section [9.4.2](#) for examples. The nature of such nuances is difficult or impossible to figure out on the basis of the paradigms. In any case, the languages involved are so much different that a translation of isolated verbal forms is, strictly speaking, impossible outside of a sentence context.

4 Peculiarities of the Akkadian column.

The Akkadian of the paradigms as a rule conforms to standard OB Akkadian. But there are a few peculiarities.

4.1 Non-assimilation of pronouns.

In OBG T VII (which is the only paradigm with plural objects), plural pronouns are not assimilated to the ventive *m*, in distinction to singular pronouns. Thus we have:

VII§17: <i>illakaššum</i>	=	he comes to him (< <i>illakam šum</i>),
VII§21: <i>illakakkum</i>	=	he comes to you (< <i>illakam kum</i>),
VII§54: <i>illakunikum</i>	=	they come to you (< <i>illakunim kum</i>)

but

VII§86: <i>illakam šunuši</i>	=	he comes to them,
VII§69: <i>illakam kunuši</i>	=	he comes to you(pl.),
VII§77: <i>illakunim kunuši</i>	=	they come to you(pl.)

The distinction between singular and plural is curious. But I think that the OB grammarians might disagree with Edzard's comments (2003: 92)^[6] on the lack of need to construe ad hoc assimilation rules for the Akkadian ventive.

4.2 Peculiar use of Akkadian pronouns.

The Akkadian verbal case system knows only two cases: accusative and dative (the genitive occurs exclusively in nominal phrases). In standard Akkadian, the accusative refers to the direct object and the dative to an indirect object, typically to the beneficiary of the action. Somewhat unexpectedly, in the paradigms the Akkadian accusative never mirrors a Sumerian direct object. Admittedly, the Sumerian direct object almost always is an unreferenced impersonal/indefinite /b/. There is a unique example where a human 3rd person /n/ could have been mirrored by an Akkadian pronoun, but is not, namely the curious X 19: *gub-ni* = *i-zi-i-zi* = "stand him! put him up!" (the parallel form in VI§21: *gar-bi* = *šu-ku-un* = "place it!", *gar-ni* = "place him" lacks an Akkadian translation). For possible (but questionable) exceptions involving 1st person references see Section 12.3.

In the paradigms, the two Akkadian cases each split into several Sumerian cases, often in a somewhat haphazard fashion. Instead of direct objects, Akkadian accusative pronouns systematically are used for two purposes: they refer to subordinate subjects (make *him* put it), and they are used with comitative function (place it *with him*). The Sumerian dative and the Sumerian terminative both ordinarily are rendered by the Akkadian dative. Otherwise, the use of Akkadian cases seems to be context dependent: if a Sumerian locative refers to the start point of a motion, the Akkadian accusative is used, but if it refers to the end point, the dative. See Section 8.7, and also Section 10.6.

4.3 Nt-stems.

In the Akkadian grammars, the existence of Nt-stems still is disputed. In the 1st edition of GAG^[9] §86b von Soden denied their existence, in *Ergänzungsheft*, p. 34**, paradigm 13, he allowed them, and the 3rd edition, §95d, contains the qualified statement that some verbs "probably" form Nt-stems. Huehnergard and Woods (2004: 257)^[10] express doubts about their existence. Our paradigms contain clear examples of an Nt-stem (OBGT VI§56-57, §64-65), with non-ventive and ventive forms respectively. See Section 9.4.5 for a detailed discussion.

4.4 Negations.

The use of *u₂-la* (instead of *u₂-ul*) in OBG T III may indicate an early OB origin of that bilingual paradigm. Note that UET 7, 102 uses *u₂-ul*, see Black (1991: 143-148)^[3].

5 Dialectal(?) variability.

OBT VII is preserved in two different recensions, one of unknown provenance (*sic!*, oral comment by M. Civil), now in the Chicago Oriental Institute (OI), the other from the Ur excavations. The OI recension offers the entire paradigm on a single large tablet (104 paragraphs, 318 lines). The Ur recension had smaller tablets, two of them almost completely preserved. One of them (UET 7, 100) offers the beginning of the paradigm up to §33, the other (UET 7, 101) the beginning up to §69, with a catch line to §70. In addition, the same verb *gen/du* = *alākum* = “to go” is treated in a partially overlapping unilingual paradigm N3513+N3592 from Nippur, which is shorter (96 lines) and covers also some negative forms, see Black (1991: 155-158)^[3] and Appendix A.

The Sumerian morphology is often obscured by assimilation and elision, and by inadequacies of the cuneiform writing system. Fortunately, the paradigms clarify it by the position on the grid. There sometimes are substantial differences of spelling between the recensions. For example, the two recensions of VII§35 mirror the Akkadian *alkaniššum* = “come(pl.) to him!” with:

ga₂-a-mu-un-še-en-ze₂-en (Oriental Institute recension, line 99),

gen-am₃-ši-ze₂-en (Ur recension, UET 7,101, ii 42)

The grid and the Akkadian translation make it clear that the underlying common Sumerian morphology must be: /gen/-/m/-/n/-/ši/-/enzen/. Here, /gen/ is the verbal base “to go”, /m/ the ventive prefix, /n/ the 3rd person pronoun, /ši/ the terminative case marker, and /enzen/ the 2nd person plural pronoun. We cannot know for sure whether the differences are dialectal or merely in spelling, or between theoretical (morphological) and phonetical writings. For example, ga₂-a- could be the phonetic rendering of a morphological gen- when it precedes m. The conclusion is that we can rarely distinguish whether a seemingly absent morpheme really is absent, or invisible because it has been assimilated or elided, or omitted because of inadequacies of the cuneiform representation. Moreover, while the texts seem to be written very carefully, they contain some recognizable scribal errors (on average about one every 25 lines).

By chance, all four lines of §67 of the OI recension are covered not only by the Ur recension, but also by the unilingual paradigm N3513+N3592, with a somewhat different arrangement. This paragraph offers four non-indicative ventive forms (imperative, volitive, precative), and we get the following illuminating comparisons:

OI version,	VII§67		
191	ᵀga ₂ ¹ -a-me-a	<i>al-kam ni-a-ši</i>	come to us!
192	ga-mu-e-ne-gen	<i>lu-ul-li-kam ku-ᵀnu¹-ši</i>	may I come to you(pl.)!
193	ḥe ₂ -me-du	<i>li-il-li-kam ni-a-ši</i>	may he come to us!
194	ᵀhu ¹ -mu-e-ne-du	<i>li-il-li-kam ku-nu-ši</i>	may he come to you(pl.)!
Ur version,	UET 7, 101		
178 = iv 33	gen-am ₃ -me	<i>al-ᵀkam ni-a-ši¹-im</i>	come to us!
179 = iv 34	ga-mu-e-ne-gen	<i>lu-ul-ᵀli-kam ku-nu¹-ši-ᵀim¹</i>	may I come to you(pl.)!
181 = iv 36	ḥe ₂ -me-du	<i>li-ᵀil-li¹-ka ni-a-ši-im</i>	may he come to us!
180 = iv 35	ḥe ₂ -mu-e-ne-du	<i>li-ᵀil¹-[li-kam] ᵀku-nu-ši-im¹</i>	may he come to you(pl.)!

Nippur version, N3513+N3592			
i 1	ᵀga ₂ ¹ -am ₃ -[me-ši]	(no translation)	come to us!
i 2	ga-mu-e-ne-ši-[gen]		may I come to you(pl.)!
i 23	ḥe ₂ -em-me-ši-du		may he come to us!
i 24	[ḥe ₂]-mu-e-ne-ši-du		may he come to you(pl.)!

Note the use of ga₂ for a morphological gen, but of ga for the volitive. Note that the Ur version, in distinction to the OI version, uses mimation with the Akkadian plural pronouns. The Akkadian *-ka* in UET 7, 101, line 181 may be a scribal error for the expected *-kam*, but as the same post-OB spelling of the ventive occurs twice more in the same tablet, all three times in front of *ni-a-ši-im*, we may have some curious sandhi effect.

The Sumerian morphology underlying the four lines in N3513+N3592 is

/gen/-/m/-/me/-/ši/
 /ga/-/m/-/ene/-/ši/-/gen/
 /ḥe/-/m/-/me/-/ši/-/du/
 /ḥe/-/m/-/ene/-/ši/-/du/

In the other two recensions, the /ši/ is absent; in imperative forms the OI recension uses /a/ in its place (line 191).

The differences between the three versions seem to be mainly dialectal, with the possible exception of the different use of the case marker /ši/. All three versions use the terminative case marker /ši/ with singular objects. N3513+N3592 uses it also with plural objects, which may represent normative systematization. In the other two recensions, the case of plural objects mostly is unmarked, in the Ur recension throughout, while the OI recension uses the marker /a/ exclusively, but systematically, with imperative forms. We note that this /a/ is conditioned by the imperative, not by the position at the end of the word. In particular, /a/ occurs also in intervocalic positions:

VII§93 ga₂-a-ne-a-en-ze₂-en al-ka-nim šu-nu-ši come(pl.) to them!

The morphology is /gen/-/m/-/ne/-/a/-/enzen/, with /ne/-/a/ = “to them”. We already have noted in Section 4.1 that Akkadian plural personal pronouns are not assimilated to the preceding verb. Thus, we read VII§35: *al-ka-ni-iš-šum* = “come(pl.) to him!”, but VII§93 *al-ka-nim šu-nu-ši* = “come(pl.) to them!”

The Sumerian ventive /m/ is very often, but apparently not systematically, contracted with a following m of the first person: compare ḥe₂-me-du in the OI and Ur versions to ḥe₂-em-me-ši-du in the Nippur text.

Before the e of the 2nd person the ventive /m/ systematically becomes mu, thus: /m/-/ene/ > muene. Since also /m/-/ba/-/e/ > mmue, as is shown by many forms occurring in OBGT VII, such as the morphological /m/-/ba/-/e/-/ši/-/du/-/ø/ in VII§20: am₃-mu-e-ši-du = *it-ta-al-la-ka-ak-kum* = “he comes away to you”, the transitional vowel u may originate from the 2nd person, rather than from the ventive. Does the 2nd person e hide an original *we? This conjecture is corroborated by the comparison of IX§34 with IX§35 in Section 10.5.3.

Somewhat inconsistently, we may have vowel harmony: compare ḥe₂-mu-e-ne-du to ᵀḥu¹-mu-e-ne-du.

6 Sumerian verbal morpho-syntax: an overview.

In this section I give an overview of the Sumerian verbal morpho-syntax, as far as it can be extracted from the bilingual paradigms. This overview is intended to facilitate the subsequent discussion, whose details are intertwined and spread over several paradigms. Since the same or similar features appear in different places, it will be almost impossible to avoid some repetitiveness in that discussion.

An example of a highly composite transitive indicative form is

VI§61	im-ma-di-ni-ib ₂ -gar	<i>uš-ta-aš-ki-na-aš-šu</i>	someone(b) caused him ₁ (ni) to put(gar) it(∅) away(ba) here(m) with him ₂ (di)
-------	----------------------------------	-----------------------------	--

Thanks to the paradigmatic grid which underlies OBGT VI (see Section 9.1) it is fairly straightforward to dissect this form. From left to right the Sumerian construction can be interpreted as:

m	ventive marker “here”
ba	separative marker “away” (assimilated m-ba > mma; the combination is written im-ma)
(n)	indirect object “him ₂ ”, elided
di	comitative case marker “with”
ni	subordinate subject “him ₁ ”
b	impersonal subject “someone, they, it”
gar	verbal base “to put”
∅	direct object “it”, invisible

The Akkadian *-šu* reflects the Sumerian (n)di “with him”.

This example shows how the Sumerian grammatical elements are placed in fixed order into “slots”:

- (1) A slot for a so-called “conjugation prefix”, here mma.
- (2) A slot for an indirect object, here (n)di.
- (3) A slot for a transitive subordinate subject, here ni.
- (4) A slot for a transitive subject or direct object, or an intransitive subordinate subject, here b.
- (5) A slot for the verbal base, here gar.
- (6) A slot for a direct object or subject, here ∅.

In this paper, (4) and (6) are denoted as the “infix” and “suffix” position, respectively.

Thus the Sumerian grammar of the OB grammarians appears to categorize the participants of a transitive construction into four distinct slots: subject, direct object, subordinate subject, indirect object. Some slots may contain composite elements, such as mma or ndi, but apart from a single paragraph that seems to contain two indirect objects (VI§28, discussed in Section 9.4.4), there are no forms with duplicated slots. Intransitive constructions of course omit the direct object.

The whole chain can be preceded by a negative particle (nu-, na-, see Section 11).

Non-indicative forms show basically the same structure, but imperatives shift the verbal base to the front position, while volitive and precative forms are preceded by ga- and ħe₂-, respectively, such as:

VI§12	gar-mu-na-ni-ib ₂	<i>šu-uš-ki-na-aš-šum</i>	make him(ni) put it(b) for him(na) here(m)!
	ga-mu-na-ni-ib ₂ -gar	<i>(lušaškinaššum)</i>	let me make him put it for him here!
	ħu-mu-na-ni-ib ₂ -gar	<i>(lišaškinaššum)</i>	let him make him put it for him here!

Singular subjects are implied, that is left unmarked, while plural subjects are suffixed, see the comments on subject markers made in Section 6.1. Note the vowel harmony (ħe₂ > ħu).

Parenthesized forms correspond to blanks in the Akkadian column.

The following sub-sections summarize the available markers, this time from right to left.

6.1 Subject and direct object.

From the point of view of an Akkadian or English speaking person (but not necessarily of a native Sumerian), the infixed pronoun has three separate, distinct functions:

- transitive subject
- direct object
- intransitive subordinate subject

and the suffixed pronoun has two:

- subject
- direct object

The Akkadian subject may correspond either to the infixed or to the suffixed Sumerian pronoun. With intransitive constructions, the subject (that is, the grammatical element corresponding to the Akkadian subject) is suffixed. With present tense transitive constructions, the subject is suffixed, the direct object infixed. With preterite tense transitive constructions, the subject is infixed, the direct object suffixed. Hence the Sumerian conjugation is split ergative: the preterite shows the typical ergative feature that the transitive direct object behaves like the intransitive subject, while the present tense conforms to the common nominative–accusative pattern. See Section 7 for details.

Actually, I believe that from the point of view of ergative Sumerian the seemingly distinct functions of these pronouns are conceptually identical. The paradigms do not suffice to show whether the OB grammarians, who are forced to separate them according to function in the Akkadian column, would share this opinion.

The pronouns attested in our paradigms are as follows (we use the same order of persons as the paradigms: 3rd, 1st, 2nd person):

	singular		plural
	infix	suffixed	suffixed
3 rd non-person	b	ø	—
3 rd person	n	ø, e	eš, ene
1 st	ø	en	enden
2 nd	e	(e-)en	enzen

It seems that the non-person 3rd has no separate plural marker (but the evidence of the paradigms is insufficient).

There are two sets of suffixed 3rd person pronouns used as subject markers. One (ø, eš) is used with intransitive, the other (e, ene) with transitive constructions, but, significantly, also with intransitive constructions in the presence of a subordinate subject.

As a rule, the suffixed 1st and 2nd person singular are not distinguished in writing, apart from one text (OBGT V 2ff.) which writes en for the 1st and e-en for the 2nd person. This may indicate a phonetic distinction. But as this is the only paradigm doing so, the differentiation may very well be synthetic.

Very often, the pronomial morphemes are distorted or hidden by assimilation. The e of the 1st and 2nd pronouns is usually assimilated to a neighboring vowel. It is not clear whether the infixed 1st and the suffixed 3rd person pronouns really are supposed to be void, but they are invisible anyway.

Subject markers. OBGT VII gives a complete coverage of intransitive usage. The paradigms OBGT VI-X do not offer any plural subjects with infix conjugation, and suffixed plural subjects occur only in the intransitive OBGT VII.³ The paradigms also show that with non-indicative forms (imperative, volitive, precative) singular subjects are implied, that is, left unmarked, while for plural subjects, the suffixed plural pronouns are appended.

VII§8	gen-na-an- ¹ še ¹ ga-an-ši-gen he ₂ -en-ši-du	a-li[k]-šum lu-ul-lik-šum li- ¹ il ¹ -lik-šum	go to him! may I go to him! may he go to him!
VII§41	gen-na-an-še-en-ze ₂ -en ga-an-ši-re ₇ -en-de ₃ -en he ₂ -en-ši-su ₈ -be ₂ -eš	al-ka-a-šum i ni-lik-šum li-il-li-ku-šum	go(pl.) to him! may we go to him! may they go to him!
VII§83	[gen]-ne-a [ga]-ne-gen [he ₂]-ne-du	a-lik šu-nu-ši lu-ul-lik šu-nu-ši li-li[k] šu-nu-ši	go to them! may I go to them! may he go to them!
VII§95	gen-ne-a-en-ze ₂ -en ga-ne-re ₇ -en-de ₃ -en [he ₂ -ne-su ₈ -be ₂ -eš]	al-ka šu-[nu-ši] ¹ i ni-lik ¹ [šu-nu-š]i [li-il-li]- ¹ ku šu-nu-ši ¹	go(pl.) to them! may we go to them! may they go to them!

See Sections [7.1](#), [8.1](#), and Appendix A for further details.

There are two sets of suffixed 3rd person pronouns used as subjects, one (ø, eš) used with intransitive, the other (e, ene) with transitive constructions. I presume that /e/ serves with singular transitive subjects of both the person and the non-person class, but the paradigms do not suffice to establish this. The use of /e/ and /ene/ is documented in OBGT III with several forms of the transitive verb *dim₂* = *epēšu* = “to make”. Thus we have:

III 88	he ₂ -ib ₂ -dim ₂ -me	li-pu-uš	may he make it
III 96	he ₂ -en-na-ab-dim ₂ -e	li-pu-su-um	may he make it for him
III 91	he ₂ -dim ₂ -e-ne	li-pu-šu	may they make it
III 97	he ₂ -en-na-ab-dim ₂ -e-ne	li-pu-šu-šum	may they make it for him
III 99	¹ mu ¹ -ub-dim ₂ -e	i-pu(error for pi)-ša-am	he makes it here

The use of the suffix /e/ in transitive *precative* forms is surprising and possibly erroneous. I would have expected that singular subjects, as with the just discussed intransitive non-indicative forms, would be implied rather than explicitly written. The precative forms of the transitive verb *gar* = *šakānu* = “to put” listed in Section [9.1](#) do not exhibit such an /e/. On the other hand, a small number of present tense forms of the same verb in OBGT VI§77-83 (see Section [9.4.6](#)) also show that the 3rd person sg. subject of the transitive suffix conjugation is /e/, rather than /ø/. Remarkably, VI§83 shows that *intransitive* present tense constructions use the same /e/ in constructions with an *infix subordinate subject*, see Section [7.2](#) and also Section [9.4.6](#).

Direct object markers. In the paradigms OBGT VI-X, almost all direct objects are impersonal, and hence in *indicative* constructions occur as /b/ in infix position and are invisible in suffix position. In the curious paragraph VI§34, discussed in Section [9.4.1](#), /en/ is used for suffixed 1st and 2nd person direct objects. *Non-indicative* constructions seem to use the *infix* series of pronouns for direct objects and intransitive subordinate subjects, see the first two examples of Section [7.2](#). While the use of /b/ in non-indicative constructions is documented abundantly, /n/ occurs only twice (in VI§21 and X 19). It is possible that for 1st person direct objects (where the infixed pronoun /ø/ would be invisible) the pronoun /en/ is borrowed from the *suffixed* series, see Section [12.3](#).

³ A variety of plural constructions occurs in UET 7, 102, see Black (1991: 143-148)^[3]. Apparently, the same suffixed pronouns (-enzen, -enden, -ene) indiscriminately express plural transitive subjects and direct objects. The poorly preserved text contains more than a fair share of scribal errors and shall not be treated here.

6.2 Subordinate subject.

In transitive constructions, a subordinate subject (corresponding to the agent in Akkadian causative constructions) is referenced by the following series of pronouns. I prefer to call this Sumerian construction by the neutral term “subordinative” rather than “causative”, since, in distinction to the Akkadian causative Š-stem, it seems to refer to the subordinate subject without specifying the precise relationship (for example, whether the subordinate subject is made to, or allowed to perform the action).

3 rd non-person	bi ₂
3 rd person	ni
1 st	mu
2 nd	ri

See Section [9.2.2](#) for details.

Intransitive constructions treat the subordinate subject differently. The few examples contained in the paradigms show that the pronominal markers for a subordinate intransitive subject are identical in form and position to the infixed pronouns /b/ and /n/ marking a transitive subject or direct object. This holds both for indicative and non-indicative forms. The consequence is that causative intransitive constructions formally are not distinguishable from non-causative transitive constructions with suffix conjugation: the subordinate subject of the former corresponds to the direct object of the latter.

See Section [7.2](#) for examples contrasting transitive and intransitive, causative and non-causative constructions of the same verb, and Section [9.4.2](#) for further examples and remarks on the ambivalence of the infixed pronouns. The semantics of the infixed subordinate subject markers is delicate; my impression is that with intransitive constructions of transitive verbs the subordinate subject suffers the action, amounting to a passive interpretation (passive = suffering).

Thus, the infixed pronouns appear to have the following typical functions:

- transitive subject in preterite tense transitive constructions
- direct object in present tense or non-indicative transitive constructions
- subordinate active subject in intransitive constructions of intransitive verbs
- subordinate passive subject in intransitive constructions of transitive verbs

The last two correspond to English constructions of the type “have someone run” and “have someone placed”, respectively. There are ambiguities, in particular with verbs that can be construed both transitively and intransitively, as for example kas₄ ... du₁₁ in Section [7.2](#). These two-part verbs as a rule are construed transitively, roughly as “do(du₁₁) a running(kas₄)”, but occasionally the reference to the direct object kas₄ is omitted, resulting in an intransitive construction.

6.3 Oblique cases and oblique case pronouns.

Five or six oblique cases are represented in the paradigms. The table gives the case morphemes and their combination with pronouns:

Case	Morpheme	Singular			Plural		
		3 rd	1 st	2 nd	3 rd	1 st	2 nd
comitative	/da/, /di/	(n)da	?	eda	?	?	?
dative	/*ra/	na	ma	ra	?	?	?
terminative	/ši/	(n)ši	m.muši	m.ueši	(neši)	m.meši	m.ueneši
locative	/ø/, /a/	(na)	?	ea	ne(a)	me(a)	ene
“locative-2”	/ø/?	(ni)	?	ri	?	?	?
ablative	/ta/	(b)ta	?	?	?	?	?

Among the Sumerian oblique cases, the comitative is rendered by the Akkadian accusative, the others ordinarily by the Akkadian dative. If the locative refers to the end point of a motion, the Akkadian dative is used, if to the start point, the accusative.

The paradigms do not quite suffice to establish the meaning of the cases, so some names and interpretations were borrowed from the modern grammars. But on the basis of the paradigms alone one can show that for verbs of motion the terminative refers to the end point of the motion, while the locative can refer either to the start or the end point. It is difficult to avoid the impression that the dative refers to the beneficiary of an action, and spotty occurrences of /ta/ suggests an ablative function. It is not entirely clear whether /ri/ is a variant of the dative /ra/, or whether it has a function comparable to that of the locative. For clarity, I list /ri/ in a separate row entitled “locative-2”, borrowing a term used by Edzard (2003: 93)^[6] for a variant of /ni/ (which, however, is not attested in our paradigms). On the basis of the paradigms, the name “dative-2” would also have been possible.

Very often the pronouns /n/ and /b/ (for the latter see Section 9.4.4) are not expressed in the writing. Often this will be due to elision or assimilation, but conceivably the inclusion of self-evident pronouns is optional.

Note that the OB grammarians keep the 1st person pronoun separate from the ventive /m/, see Section 8.5 for the terminative case and Section 9.2.1 for the dative case. This goes against the modern view.

Some comments on the spelling, use, and other peculiarities of the cases follow.

Comitative. When followed by the subordinative marker /ni/, the comitative marker /da/ becomes /di/.

Dative. The Sumerian dative seems to use three different forms for the three persons, but behind them a hypothetical morpheme /*ra/ can be reconstructed. The restoration of the 3rd person dative as *n-ra > n-na > na is based on otherwise unmotivated occurrences of double-n writings as in VI§11: gar-mu-un-na-[ab] = *šuknaššum* = “place it for him here!”. For the restoration of the 1st person dative as *m-ra > ma-ra > ma see Section 9.2.1. I reconstruct the 2nd person dative as *we-ra > ra.

Terminative. 1st and 2nd persons require ventive /m/. Plural forms are attested in N3513+N3592 only.

Locative. Plural forms are attested in OBGT VII, see Section 5. The 2nd person singular /ea/ is attested in IX§35-36, see Section 10.5.3. This shows that the OB grammarians distinguished 2nd person singular locative from dative /ra/. The 3rd person singular is expected to be /na/. Its occurrence is expected but unproven, since in the paradigms it cannot be separated from the homographic dative, see the ambiguous examples in Sections 10.4 and 10.5. Therefore I have enclosed it in parentheses.

OBGT VII does not use /ši/ with plural objects and mostly leaves the case unmarked. With plural objects and imperatives the OI recension (only that recension, and only with imperatives) uses a marker /a/ in place of /ši/. I assume that the marker of the unmarked case really is /a/, but that the vowel mostly is elided. This unmarked case can also have ablative meaning, when combined with /ba/, see Section 8.7. Apparently this case can reference both the starting point and the end point of a motion, and to distinguish it from the terminative, “locative” therefore seems to be an apposite name.

Locative-2. The morpheme /ri/ is curious. In the paradigms, half of its occurrences apparently have a subordinative meaning, referring to a 2nd person subordinate subject:

VI§19, VI§20=X 18, VIII§10, IX§20, IX§45, IX§47.

This is plainly evident in the causative indicative paragraph

IX§45	sa ₂ i-ri-ib ₂ -du ₁₁	u ₂ -ša-ak-ši-id(!)-ka	somebody(b) made you reach	Pt	Š		2A
	sa ₂ i-ri-du ₁₁	(uša ₂ kšidka)	I made you reach	Pt	Š		2A

which displays a transitive construction with infix conjugation, and is probable in the others.

Another half clearly have a different meaning, referring to a 2nd person indirect object:

VIII§20-23, IX§42-43, IX§46,

of which a clear example is given by

VIII§20	kas ₄ mu-ri-in-du ₁₁	il ¹ -su-ma-[kum]	he ran to you here	Pt	G	V	2D
	kas ₄ mu-ri-d[u ₁₁]	(alsumakkum)	I ran to you here	Pt	G	V	2D

Two more paragraphs (VIII§12 and IX§22) are ambiguous. See the discussion of these paragraphs in Section 10.4.2. Thus, it appears that there are two homophonous or homographic morphemes /ri/, belonging to different slots: one refers to a 2nd person subordinate subject, the other to a 2nd person indirect object.

But what is the meaning of /ri/? In principle, when referring to an indirect object, /ri/ might be an alternative to /ra/, maybe merely an alternative spelling (remember that the comitative /da/ has the variant /di/). But note that in IX§31 /ra/ and in IX§46 /ri/ are used with identical Akkadian translations:

IX§31	sa ₂ ma-ra-an-du ₁₁ sa ₂ ma-ra-du ₁₁	ik-šu-da-ak-ka (akšudakka)	he reached for you here I reached for you here	Pt Pt	G G	V V	2A 2A
IX§46	sa ₂ mu-ri-in-du ₁₁ sa ₂ mu-ri«-in»-du ₁₁	ik-šu-da-ka (akšudakka)	he reached you here I reached you here	Pt Pt	G G	V V	2A 2A

The fact that the two forms occur in the same paradigm may suggest a differentiation in meaning, rather than merely in spelling.

With verbs of motion /ri/ might also be used as an alternative to /ši/. Compare in particular the two paragraphs:

VIII§20	kas ₄ mu-ri-in-du ₁₁ kas ₄ mu-ri-d[u ₁₁]	il ¹ -su-ma-[kum] (alsumakkum)	he ran to you here I ran to you here	Pt Pt	G G	V V	2D 2D
VII§31	mu-e-ši-gen mu-e-ši-gen-en	il-li-ka-ak-kum al-li-ka-ak-kum	he came to you I came to you	Pt Pt	G G	V V	2D 2D

The corresponding case here overlaps with the terminative and may suggest a locative function. In my opinion the use made of /ri/ in OBGT VIII and IX therefore suggests locative rather than dative use, but the evidence does not suffice to prove it.

In this connection I must draw attention to a remark by Edzard (2003: 99)^[6]. He proposes homography (not necessarily homophony) between his “directive” /ni/ (a case covering my “subordinative”) and what he calls “locative-2” /ni/. He points out that they may follow each other and do not fall into the same slot, so that they definitely have to be kept apart (p. 102). Our paradigms do not offer instances of Edzard’s “locative-2” /ni/, and Edzard does not list /ri/ in the “locative-2” column (p. 93). But in our paradigms an analogous homography/homophony and differentiation of slots would seem to apply to /ri/. In any case, they document a clear separation between the subordinative /ri/ and the “locative-2” /ri/, placing them in different slots and using causative or non-causative translations, respectively.

Ablative. The case morpheme /ta/ is peculiar and shall be discussed in detail in Section 9.4.4. It occurs in three paragraphs only and according to them must have ablative/separative meaning. In our paradigms it is the only case morpheme used with impersonal reference. Note that according to Thomsen (1984: 230)^[21] the ablative-instrumental prefix /ta/ has inanimate reference only.

6.4 Conjugation prefixes.

The so-called “conjugation prefixes” – as they are called in modern grammars – are a misnomer, they have nothing to do with conjugation. They form the initial part of verbal forms. The conjugation prefixes constitute the most controversial part of modern Sumerian grammars (cf. Michalowski 2004: 44)^[17]. No two Sumerologists appear to agree fully on their form, meaning, etymology and identity; the number of ranks that they occupy is equally disputed. Michalowski prefers a minimalist position with only four distinct conjugation prefixes: *mu-*, *ba-*, *i-* (or *V-*) and *imma-*.

The grid of OBGT VI (see Sections 9.1 and 9.3) offers a remarkably clear segmentation of these prefixes into three groups with three elements each:

stative (/ā/, (/al/), /ba/), main (/i₃/, /bi₂/, /mu/), directional (/m/, /ba/, /mma/).

The **directional prefixes** are discussed in Section 8.4. Among them, /m/ has ventive and /ba/ separative functions, and /mma/, written *imma* or *amma*, is their composition. Somewhat mechanically, I render /m/ and /ba/ by “here” and “away”, respectively.

Among the **main group**, the Akkadian translation does not distinguish between /i₃/ and /mu/. The prefix /bi₂/ is peculiar and in OBGT VI occurs only in an insert inside the /i₃/-group. It is discussed in Sections 9.3.1 and 9.4.2. Apparently there are two homophonous morphemes /bi₂/, one being a conjugation prefix, the other referring to an impersonal subordinate subject.

In distinction to the other groups, the **stative group** of the regular grid uses suffix conjugation, but it is followed by a one-paragraph insert with infix conjugation. We should pay attention to the differences between the languages: what we call the Sumerian stative is a regular verbal construction that can be mirrored by the Akkadian stative. It is characterized by distinctive prefixes but is conjugated in the ordinary fashion, both with suffix and infix conjugation. In particular it admits tenses. The Akkadian stative, on the other hand, is indifferent with regard to tense, see GAG^[9] §77, and apparently it is avoided with non-resultative verbs. The stative prefix /ā/ and the stative/passive prefix /ba/ are discussed in Section 8.6 and at various places in Sections 9.3 and 9.4.1. The prefix /al/ is somewhat peculiar and does not occur in OBGT VI. It therefore has been put in parentheses.

The nine conjugation prefixes seem to be mutually exclusive – at least they are treated as such in our paradigms. With *non-indicative forms* the use of a conjugation prefix is optional, and the directional prefixes are the only prefixes allowed. With *indicative forms* the use of a conjugation prefix is mandatory. Of the main group, /i₃/ seems to be a kind of default prefix, to be used with indicative forms in the absence of other prefixes, while /mu/ apparently is used only with transitive constructions, but neither of them has a discernible semantic function.

7 Conjugation and split ergativity.

7.1 Sumerian versus Akkadian conjugation: split ergativity.

On the tablets, the paradigms are subdivided into paragraphs, that is, into groups of a few consecutive lines of text, separated by a horizontal dividing line. The structure of these paragraphs is based on Akkadian conjugation. Most paragraphs have 3 lines, in the order: 3rd, 1st, 2nd person Akkadian subject. With non-indicative forms, the order is reversed: imperative(2nd), volitive(1st), precative(3rd). This paragraph structure divides the Sumerian forms into two conjugation types, as shown in the following display, which also illustrates the multiple Sumerian verbal bases. Note that the final consonant of the plural *marû* base /sub₂/ is expressed only before vowels, resulting in writings such as -su₈-be₂-.

Suffix conjugation:	Sumerian	Akkadian	
VII§12	i ₃ -du i ₃ -du-un i ₃ -du-un	<i>illak</i> <i>allak</i> <i>tallak</i>	he goes I go you go
VII§45	i ₃ -su ₈ -be ₂ -eš i ₃ -su ₈ -be ₂ -en-de ₃ -en i ₃ -su ₈ -be ₂ -en-ze ₂ -en	<i>illaku</i> <i>nillak</i> <i>tallaka</i>	they go we go you(pl.) go
VII§32	ba-gen ba-gen-en ba-gen-en	<i>ittalak</i> <i>attalak</i> <i>tattalak</i>	he went away I went away you went away
VII§65	ba-re ₇ -eš ba-re ₇ -en-de ₃ -en ba-re ₇ -en-ze ₂ -en	<i>ittalku</i> <i>nittalak</i> <i>tattalka</i>	they went away we went away you(pl.) went away
VIII§15	kas ₄ am ₃ -me kas ₄ am ₃ -me-en kas ₄ am ₃ -me-en	<i>ilassumam</i> (<i>alassumam</i>) (<i>talassumam</i>)	he runs here I run here you run here

Infix conjugation:	Sumerian	Akkadian	
VI§44	mu-un-gar mu-gar mu-gar	<i>iškun</i> (<i>aškun</i>) (<i>taškun</i>)	he placed it I placed it you placed it
VI§47	mu-di-ni-ib ₂ -gar mu-di-ni-gar mu-di-ni-gar	<i>ušaškiššu</i> (<i>ušaškiššu</i>) (<i>tušaškiššu</i>)	someone caused him to place it with him I caused him to place it with him you caused him to place it with him
VIII§19	kas ₄ mu-un-du ₁₁ kas ₄ mu-du ₁₁ kas ₄ mu-e-du ₁₁	<i>ilsumam</i> (<i>alsumam</i>) (<i>talsumam</i>)	he ran here I ran here you ran here

Here and elsewhere, parenthesized forms correspond to blanks in the Akkadian column; in most cases they can be filled in easily and unambiguously, once one understands the construction of the grid. As a rule, it is sufficient to quote only the first line of a paragraph. In the above listing I have used connected transliteration for the Akkadian, and I have not indicated damaged signs whose restoration is certain.

With the exception of ene, the above listings provide evidence for all the pronouns already listed in Section 6.1:

	singular		plural
	infix	suffixed	suffixed
3 rd non-person	b	ø	—
3 rd person	n	ø, e	eš, ene
1 st	ø	en	enden
2 nd	e	(e-)en	enzen

But the listings also show that the pronomial morphemes very often are distorted or hidden by assimilation. As a rule, the suffixed 1st and 2nd person singular are not distinguished, apart from one text (OBGT V 2ff.) which writes en for the 1st and e-en for the 2nd person. The e of the 1st and 2nd pronouns is usually assimilated to a neighboring vowel. It is not clear whether the infixed 1st and the suffixed 3rd person pronouns really are supposed to be void, but they are invisible anyway.

The paradigms OBT VI-X do not have any plural subjects with infix conjugation.

With *intransitive* constructions, the suffix conjugation is used, both with the present and the preterite tense. *Transitive* constructions show a split: the suffix conjugation is used in the present tense, the infix conjugation in the preterite. Fully conjugated present tense transitive constructions occur only in OBT VIII and IX. In the above display the split is illustrated by the two-part verb kas₄ ... du₁₁ = *lasāmum* = “to run”. In Sumerian this verb is constructed transitively, namely as “do(du₁₁) a running(kas₄)”. The auxiliary verb “to do” has *hamtu*-base du₁₁ and *marû*-base e (compare VIII§15 and VIII§19 in the display).

There is a kind of duality: in transitive constructions, the position before or after the base not used for the transitive subject is used for the direct object. Though, the evidence is spotty. In our paradigms almost all direct objects are 3rd impersonal (it, someone), and as such are invisible in suffix position. They appear as /b/ in non-indicative forms and in present tense transitive constructions (that is, in forms using the nominative-accusative pattern). For example, in VIII§15 the writing am₃-me should be analyzed morphologically as /m/-/b/-/e/-/e/, where /m/ is the ventive prefix, /b/ the direct object (a reference to kas₄), and /e/ the *marû*-base of the verb, contracted with the transitive subject /e/. In the paradigms, the impersonal /b/ is used passim for the direct object, but only rarely for the transitive subject, and conversely, I am aware of only two reasonably clear cases of a 3rd person direct object /n/ (in VI§21: gar-bi = *šu-ku-un* = “place it!”, gar-ni = “place him!”, and the parallel instance in X 19: gub-ni = *i-zi-iz* = “stand him!”). Note that VI§21 and X 19 seem to be inserts, VI§21 being irregularly structured; the regular versions with the same Akkadian translations are given in VI§1: gar-ra = *šukun* and X 1: gub-ba = *iziz*. In the curious paragraph VI§34, discussed in Section 9.4.1, the suffixed pronouns serve as logical subjects, but grammatically they are direct objects, and as such they offer isolated examples of 1st and 2nd person suffixed direct objects.

The pattern displayed by the paragraph structure shows that Sumerian in the preterite tense behaves as an ergative language (the telltale symptom is that intransitive subjects and direct objects are treated alike). But in the present tense it uses the nominative-accusative pattern. Hence, like in most ergative languages, we have split ergativity. The paradigms do not suffice to establish further particulars of the split. For detailed modern views of Sumerian ergativity, based on the unilingual material, see Michalowski (1980)^[16] and Attinger (1993: 150-152)^[2]. Curiously, Edzard (2003: 90-91)^[6] still doubts the existence of split ergativity and reaches the surprising conclusion: “Either way, the question of ‘split ergativity’ does not seem to be of any importance in Sumerian.”

7.2 Transitive and intransitive constructions.

Many verbs allow both transitive and intransitive constructions. The situation is complicated by split ergativity and by the fact that subordinate subjects are treated differently in transitive and intransitive constructions. The markers /n/, /b/ for the intransitive subordinate subject are identical in form and position to the markers used for the transitive subject or direct object. The consequence is that causative intransitive and non-causative transitive constructions formally may be indistinguishable. To confuse matters further, the paradigms occasionally switch between transitive and intransitive constructions inside the same paragraph.

Regrettably, the coverage of some forms is very spotty. But I believe to have identified examples of a majority of the relevant constructions: transitive and intransitive, non-causative and causative, non-indicative and indicative, preterite and present tense. In the paradigms most intransitive subordinate subjects are an impersonal /b/. There is one instance with a personal /n/ (in VI§39, see Section 9.4.2), but there are no examples with 1st and 2nd person intransitive subordinate subjects.

I begin with examples showing the transformation from non-causative to causative constructions in non-indicative forms. The first example shows transitive constructions:

VIII§6	kas ₄ du ₁₁ - ^ṛ ga ¹ -na-ab	<i>lu-sum₂-šum</i>	run for him!	Ni	G		3D
	kas ₄ ^ṛ ga-na ¹ -ab-du ₁₁	<i>(lulsumšum)</i>	let me run for him!	Ni	G		3D
	kas ₄ ḥ[e ₂ -n]a- ^ṛ ab-du ₁₁ ¹	<i>(lilsumšum)</i>	let him run for him!	Ni	G		3D
VIII§8	kas ₄ ^ṛ du ₁₁ -ga ¹ -na-ni-ib ₂	<i>šu-ul-si₂-im-šum</i>	make him run for him!	Ni	Š		3D
	kas ₄ ^ṛ ga-na ¹ -ni-ib ₂ -du ₁₁	<i>(lušalsimšum)</i>	let me make him run for him!	Ni	Š		3D
	kas ₄ ḥe ₂ -na ¹ -ni-ib ₂ -du ₁₁	<i>(lišalsimšum)</i>	let him make him run for him!	Ni	Š		3D

In both paragraphs the infixed or final -b denotes the direct object (kas₄), and -ni- marks the subordinate subject. Note that the closing consonant of the morpheme /dug₄/ “to do” is expressed only before vowels, resulting in writings such as du₁₁-ga-.

The second example shows intransitive constructions of the same verb:

VIII§7	^ṛ kas ₄ du ₁₁ -ga ¹ -am ₃ -še	<i>lu-us-ma-aš-šum</i>	run toward him(še) here(m)!	Ni	G	V	3D
	kas ₄ ga-am ₃ -ši-du ₁₁	<i>(lulsumaššum)</i>	let me run toward him(ši) here(m)!	Ni	G	V	3D
	kas ₄ ḥe ₂ -em-ši-du ₁₁	<i>(lilsumaššum)</i>	let him run toward him(ši) here(m)!	Ni	G	V	3D
VIII§9	kas ₄ du ₁₁ - ^ṛ ga-am ₃ ¹ -ma-ši-ib ₂	<i>šu-ul-si₂-ma-aš-šum</i>	have someone(b) run toward him here!	Ni	Š	V	3D
	kas ₄ ga-am ₃ -ma- ^ṛ ši ¹ -ib ₂ -du ₁₁	<i>(lušalsimaššum)</i>	let me have someone(b) run toward him here!	Ni	Š	V	3D
	kas ₄ ḥe ₂ -em-ma-ši-ib ₂ -du ₁₁	<i>(lišalsimaššum)</i>	let him have someone(b) run toward him here!	Ni	Š	V	3D

These constructions are eye-openers. On the Akkadian side the step from §6 to §7, and from §8 to §9, consists of adding a ventive. Therefore, one should expect that the Sumerian dative -/na/- of §6 and §7 would be expanded to -/m/-/na/-, or perhaps better, since a verb of motion is involved, the Sumerian dative should be replaced by the terminative, thus -/na/- would be replaced by -/m/-/n/-/ši/-. In other words, in the non-causative VIII§7 we might expect something like du₁₁-ga-am₃-ši-ib₂, ga-am₃-ši-ib₂-du₁₁, and in the causative VIII§9 something like du₁₁-ga-am₃-ši-ni-ib₂, ga-am₃-ši-ni-ib₂-du₁₁.

But in the text, VIII§7 is construed without the usual reference -b to the direct object kas₄, that is intransitively. The -b added in the parallel causative construction VIII§9 then must mark the indefinite subordinate intransitive subject, as taken in the above translation. Alternatively, it is also possible that this -b refers to kas₄, not as a direct object, but as a subordinate intransitive subject, resulting in the semantically equivalent interpretation “cause a running(b) toward him here!”. The double-m in the

Sumerian column of VIII§9 seems to be an error (or careless writing), the context requires the plain Akkadian Š-stem and a single-m for the ventive on the Sumerian side.

The juxtaposition of the four paragraphs §6-§9 within OBGT VIII suggests that the OB grammarian knew exactly what he was doing. It is interesting that the parallel paragraphs of OBGT IX with the verb *sa*₂ ... *du*₁₁ (IX§4, IX§5, IX§9, IX§10) use transitive constructions throughout, see the comparative discussion in Section 10.4.1. It appears that when a verb of motion combines with the Akkadian dative and the ventive, Sumerian prefers intransitive constructions (but there is an exception in VIII§11).

The third to the sixth examples contain indicative constructions. In the third example, with a preterite tense transitive construction, the infixed pronoun refers to the subject:

VI§37	<i>bi</i> ₂ - <i>in</i> -gar	<i>iš-ku-un</i>	he(n) placed it(ø)	Pt	G		
	<i>bi</i> ₂ - ^r gar ¹	(<i>aškun</i>)	I(ø) placed it(ø)	Pt	G		
	<i>bi</i> ₂ -gar	(<i>taškun</i>)	you(e, elided) placed it(ø)	Pt	G		

In the fourth example, with a preterite tense causative intransitive construction (suffix conjugation implies intransitivity), the infixed pronoun refers to the subordinate subject (the thing being placed):

VI§38	<i>bi</i> ₂ - <i>ib</i> ₂ -gar	<i>u</i> ₂ (!)- <i>ša-aš-ki-in</i>	he(ø) had it(b) placed	Pt	Š		
	<i>bi</i> ₂ - <i>ib</i> ₂ -gar-re-en	(<i>ušaškin</i>)	I(en) had it(b) placed	Pt	Š		
	<i>bi</i> ₂ - <i>ib</i> ₂ -gar-re-en	(<i>tušaškin</i>)	you(en) had it(b) placed	Pt	Š		

I believe that in these two examples the interpretation of the infixed pronoun (and the implied choice between transitivity or intransitivity) is a mere matter of preference or focus: the personal pronoun /n/ preferably serves as the subject, the impersonal pronoun /b/ preferably as the subordinate subject. The latter case, where the subordinate subjects suffers the action, amounts to a passive construction.

In the fifth example, which I believe to offer the present tense intransitive construction analogous to the above VI§38, and which is unique of its kind, the infixed pronoun again refers to the subordinate subject (the thing being placed):

VI§83	<i>bi</i> ₂ - <i>ib</i> ₂ -gar- ^r re ¹	^r <i>u</i> ₂ - <i>ša-aš</i> ¹ - <i>ka-an</i>	he(e) causes it(b) being placed	Ps	Š		
-------	--	---	---------------------------------	----	---	--	--

I take the morphology to be /*bi*₂/-/b/-/gar/-/e/, where /e/ corresponds to the 3rd person pronoun mentioned near the end of Section 6.1. If this interpretation of /e/ is correct, it implies that in the present tense the primary subject of an intransitive construction with a subordinate subject behaves exactly like the subject of a transitive construction with a direct object.

In the sixth example, with a present tense transitive construction, the infixed pronoun /b/ refers to the direct object *kas*₄. The morphology is assumed to be /mu/-/n/-/ši/-/b/-/e/-/e/ and /mu/-/n/-/ši/-/b/-/e/-/en/, respectively where the first /e/ is the *marû*-base of *du*₁₁ and the subject /e/ or /en/ at the end is contracted with the /e/ of the base. The initial mu- is *not* the ventive (the ventive version *kas*₄ *am*₃-*ši*-*ib*₂-*be*₂ is given in VIII§16), but the prefix mu-, see Section 9.3.1.

VIII§14	^r <i>kas</i> ₄ mu- <i>ši</i> - <i>ib</i> ₂ ¹ - <i>be</i> ₂	<i>i-la</i> - ^r <i>sum</i> ₂ ¹ - <i>šum</i>	he runs to him	Ps	G		3D
	<i>kas</i> ₄ mu- <i>ši</i> - <i>ib</i> ₂ - <i>be</i> ₂ -en	(<i>alassumšum</i>)	I run to him	Ps	G		3D
	<i>kas</i> ₄ mu- <i>ši</i> - <i>ib</i> ₂ - ^r <i>be</i> ₂ ¹ -en	(<i>talassumšum</i>)	you run to him	Ps	G		3D

8 OBGT VII: an intransitive verb.

The long paradigm OBGT VII is treated here first because its grid is systematically organized and permits a clear distinction between the regular grid and the inserts. With the exception of some inserts, the Sumerian and Akkadian morphology, as well as the translations, are entirely straightforward, see Appendix B for details. The distribution of the Akkadian t-infix across aspects and tenses makes it clear that here, and also in the other paradigms, we never have perfective constructions, but always Gt-, Št-, or Nt-stems.

The OI recension contains the entire paradigm on a single tablet. In 104 paragraphs with a total of 318 lines it covers the intransitive verb *gen/du* = *alākum* = “to go” and exercises the interplay between pronouns, Akkadian verbal stems and directional prefix. Of the 318 lines, 292 belong to a regular, well organized grid and 26 are inserts. The inserts are clearly recognizable as such: they are lacking in the Ur recension, and they go beyond the grid’s otherwise complete coverage of forms.

The main tablet of the Ur recension (UET 7, 101) breaks off after §69, just after the start of the section with plural objects, with a catch-line to a lost second tablet. The shorter UET 7, 100 covers only the first 33 paragraphs. Apart from the inserts the grids of the two recensions appear to have the same coverage (originally each totalling 292 lines), but they order the entries differently.

I begin with compact listings of the non-indicative (Section [8.1](#)) and the indicative (Section [8.2](#)) Sumerian forms contained in this long paradigm. In these listings the ordering of the paragraphs stays close to that of the Ur recension, where the latter is available, but the paragraph numbers are taken from the more complete OI recension. The reader is urged to have a close look at these listings — they reveal both the systematic morphology intended by the OB grammarians and the variegated spelling used by them.

In Section [8.3](#) a detailed description of the construction of the grid of these paradigms is given. See Appendix B for the morphology resulting from this construction and how it relates to the spelling of the texts.

8.1 OBGT VII: Compact listing of the non-indicative forms.

Note that occasionally there are considerable spelling differences between the OI version (line 1) and the Ur version (line 2). The numbers in the first column serve as cross-references to the table with indicative forms; see there for explanatory comments. Restorations are not indicated; see Appendix A for details.

Indicative forms of OBGT VII. This table quotes the first lines of paragraphs with indicative Sumerian forms. Lines with Akkadian ventive forms are marked by V, with separative Gt stems by Gt. In the Object column, S stands for singular, P for plural pronouns, and the number for the person. With the exception of the accusatives in #12a, all Akkadian pronouns are datives. Restorations are not indicated, see Appendix A for spelling variations and other details.

(1) There is a very clear correspondence between Akkadian ventives and Sumerian forms with an -m- near the beginning, and between Akkadian Gt-stems and Sumerian forms containing -ba-. When ventive and separative occur in combination, the b of -ba- is assimilated: -m-ba- > -m-ma-. The Sumerian ventive marker probably is a syllabic m.

(2) If a verbal form contains a ventive marker followed by a vowel, then the form begins with the m- of the ventive marker itself (#3, #11). If the ventive marker is followed by a consonant, prosthetic vowels are inserted, so that the form begins with am₃- in the present, im- or i-im- in the preterite tense.

(3) If a form contains the separative marker -ba-, but not a ventive marker, it begins with the former (#9, #10, #12a, #16).

(4) The curious appearance of the vowel u before 2nd person pronouns suggests that these pronouns originally comprised more than a mere e, and perhaps were *we in the singular and *wene in the plural.

(5) If the form contains neither -m- nor -ba-, the prefix i₃- (written in- before n) serves as a dummy stand-in before the base (#7) or before pronouns (#8: -(n)-ši-, #13: -ne-), without discernible morphemic function.

8.3 OBGT VII: the systematic construction of the grid.

For singular objects both recensions order the paragraphs with non-indicative forms in the same way, and the Ur recension follows the identical ordering rule also for indicative forms. The OI recension orders the indicative forms somewhat differently. For plural objects both recensions use still other ordering rules, collecting 1st and 2nd person objects together in §67-80, 3rd person objects in §81-104. The OI ordering rationale is not transparent to me. Note for example that the non-indicative sections §81-84 and §93-96 place the ventive paragraphs differently from the indicative sections.

The Ur rules, which are strictly applied up to the end of the singular object section in §66, can be described as follows: The person of the subject is varied inside each single paragraph. The person of the object is covered by triples of adjacent paragraphs, the first of which has no object, the second 3rd person objects, and the third 1st + 2nd person objects. A pair of such triples then covers G and Gt stems, respectively, and so on, with ever larger groupings. The largest groups are formed by the objects: singular objects are dealt with in §1-66, plural objects in §67-104.

In other words, the grammatical topics are arranged according to a system that varies

fastest:	- person of subject
then:	- person of object
	- Akkadian G, Gt stem (“go” vs. “go away”)
	- ventive, non-ventive (“come” vs. “go”)
	- tense or aspect (non-indicative, present, preterite)
	- number of subject (singular, plural)
slowest:	- number of object (singular, plural)

There are systematic restrictions:

- no self-references (1st – 1st, 2nd – 2nd person: semantic problem);
- no 1st person singular objects, except with imperative forms (Akkadian problem: ventive coincides with 1st singular dative);
- motion toward 1st or 2nd person requires ventive (Sumerian and/or Akkadian restriction).

This scheme gives a total of 292 regular entries. They agree with the 292 regular entries of the OI recension, but the latter are ordered differently. The complete set can be reconstructed mechanically *ab ovo* by a suitable computer program: first build the Akkadian grid structure (columns 6-11 of the listing in Appendix A) according to the above ordering of topics, then create the Akkadian column and the Sumerian morphology (both being essentially unique), finally replace the latter by its somewhat ambiguous phonetic or cuneiform rendering (see Section 5 for such ambiguities). Appendix B lists the reconstructed synthetic morphology and compares it with the texts.

8.4 OBGT VII: directional prefixes /m/, /ba/ and /mma/.

Here are four paragraphs offering all combinations of the Akkadian G- and Gt-stems, without and with ventive (see Section 8.2 and Appendix A for more extended listings):

VII§13	in-ši-du = <i>illakšum</i> = “he goes to him”,	G
VII§17	am ₃ -ši-du = <i>illakaššum</i> = “he comes to him”,	G + ventive
VII§23	ba-ši-du = <i>ittallakšum</i> = “he goes away to him”,	Gt
VII§19	am ₃ -ma-ši-du = <i>ittallakaššum</i> = “he comes away to him”.	Gt + ventive

With motion toward a 2nd person object the ventive is mandatory, so the quadruplet reduces to a pair

- VII§21 mu-e-ši-du = *illakakkum* = “he comes to you”, G + ventive
 VII§20 am₃-mu-e-ši-du = *ittalakakkum* = “he comes away to you”, Gt + ventive

Since these prefixes are concerned with the direction of motion, I shall call them “directional”. The examples make it abundantly clear that in these paradigms Akkadian ventives are mirrored by Sumerian forms containing a morpheme /m/. The Akkadian t-stem matches Sumerian /ba/, and the combination of Akkadian ventive and t-stem is mirrored by forms containing /mma/. This leads to the inescapable conclusion that /mma/ < /m/-/ba/. Evidently, both /m/ and /ba/ can be word-initial, so the morphemes should be set up as /m/, /ba/ and /mma/.

But as cuneiform writing has problems with consonant clusters, auxiliary vowels must be inserted before word-initial double consonants. Then, the vowel a is preferred in the present tense, the vowel i in the preterite, see the listing in Section 8.2. Note that amma- is written am₃-ma- (not am-ma-), and that am₃ seems to be used for writing a vocalic m (see the next paragraph). Under certain circumstances, im- is written i-im-, emphasizing the presence of an initial i, but this i is distinguished from the i₃ used for the conjugation prefix. This, as well as the absence of prosthetics before ba or m+ vowel, argues against the speculation that in the view of the OB grammarians those vowels reflect the conjugation prefixes /ā/ and /i₃/. An extra i- is written systematically with preterite tense ventive forms in both recensions and also in the Nippur text N3513+N3592, but not in the presence of the separative /ba/, where im-ma- is used. I do not understand the rationale behind the choice of the prosthetic vowel and the differentiation between im- and i-im-; it may depend on phonetic issues, such as vowel harmony and stress or pitch, rather than on morphemic ones.

In my opinion the variegated spellings of the ventive — am₃, im (before consonants), and mu (before the e of the 2nd person) in OBGT VII, while OBGT VI prefers ma, whereas OBGT VIII and IX oscillate between ma and mu — reflect problems with the cuneiform writing system. In particular, I take them to suggest that the Sumerian ventive /m/ at least sometimes was pronounced as a syllabic m (like the m in English “bottom”). Compare in particular the alternative rendering of morphological /gen-/m/ = *alkam* = “come!” of VII§1 by gen-am₃ in the Ur and by ga₂-nu-um in the OI recension (the latter restored with the help of VII§34). See Section 12.4 and the comments by Black (1991: 155-156)^[3].

8.5 OBGT VII: the ventive /m/ and the first person pronoun /mu/.

The beginning of the Oriental Institute recension of OBGT VII is broken off. The Ur recension (UET 7, 100) offers the following six ventive paragraphs (I quote the first lines only, see Table 1 in Section 2.1 for the remainder):

- VII §1 gen-am₃ = *alkam* = “come!” G, ventive
 §2 gen-am₃-še = *alkaššum* = “come to him!”, G, ventive, 3rd
 §3 gen-am₃-mu-še = *alkam ana šēriya* = “come to me!” G, ventive, 1st
 §4 gen-am₃-ma = *atlakam* = “come away!” Gt, ventive
 §5 gen-am₃-ma-še = *atlakaššum* = “come away to him!” Gt, ventive, 3rd
 §6 gen-am₃-ma-mu-še = *atlakam ana šēriya* = “come away to me!” Gt, ventive, 1st

Note the Akkadian emphatic idiom *ana šēriya* (literally: “to my back”) that is used to distinguish the 1st person from the mere ventive. See also its analogous use in Section 10.4.2, VIII§11, 12 and IX§21, 22. A comparison of the six paragraphs demonstrates that the Sumerian form in §6 morphologically must be analyzed /gen/-/m/-/ba/-/mu/-/še/. The first m corresponds to the ventive, the second to an assimilated /ba/, indicating a change of direction (“away”), and the third to a 1st person pronoun /mu/. This shows that the OB grammarian makes a pointed syntactic distinction between the ventive and the 1st person, in §6 separating them by the morpheme /ba/.⁴ However, this morphological distinction is made only in UET 7, 100. The slightly damaged other Ur text UET 7, 101 seems to telescope the imperative of §6 into gen-am₃-mu-še, thus using identical forms in §3 and §6. Also the OI text (where §3 is broken off) offers a telescoped version in §6, namely ga₂-nam-mu-še. Perhaps the full spelling represents the theoretical and the telescoped one the spoken version. But note that the unilingual Nippur paradigm N3513+N3592, which consistently spells mma + 1st person with three m, in iv 1 renders the equivalent of §6 with the identical morphology as ga₂-¹nam¹-ma-mu-ši, that is with a phonetical spelling of the verbal base.

Clearly, the treatment is not consistent across different forms and recensions. It appears that the OI recension in non-indicative constructions, in distinction to indicative ones, tends to prefer contracted forms. This is conspicuous in the treatment of the 1st person plural pronoun /me/:

VII§67	ḥe ₂ -me-du	li-il-li-kam ni-a-ši	may he come to us!	G, ventive,	Ni
VII§68	ḥe ₂ -em-me-du	li-it-tal ₂ -kam ni-a-ši	may he come away to us!	Gt, ventive,	Ni
VII§69	am ₃ -me-du	i-il-la-kam ni-a-ši	he comes to us	G, ventive,	Ps
VII§70	am ₃ -ma-me-du	it-tal ₂ -la-kam ni-a-ši	he comes away to us	Gt, ventive,	Ps

The morphology in §67 and §69 is /m/-/me/, while in §68 and §70 it is /m/-/ba/-/me/. In the non-indicative paragraphs §67 and §68 the multiple m are contracted (from two to one in §67, from three to two in §68), but not so in the indicative §69 and §70.

⁴ I mechanically translate the Akkadian Gt and the Sumerian /ba/ with “away”. Bert Kouwenberg objected to such an interpretation of the t-infix, and wrote: “For instance, the way you translate *atlakam* ‘come away to me’ can hardly count as correct English, but as a means to clarify the meaning of a Sumerian word it may be quite efficient, even though no Englishman would ever say it (I think) (and even though I do not think it is the correct interpretation).” This tempted me to google the phrase “come away to me”, and I came up with many instances, mostly in amorous context, in particular in a lovely poem. I cannot resist the temptation to reprint it in full:

ALOHA MY ALOHA by Mainlander

My sweet Hawaiian spirit sang to me,
Of her Islands far across the sea
I'm so very, very, far and she so very near,
The Hawaiian trade winds are what I hold so dear.
“Come to me O'mainlander, come from across the sea,
I will share my Aloha spirit, **come away to me.**”
Hawaii is calling me, I hear the trade winds whisper, the waves of the ocean deep,
lull me with a warm enduring sleep, as she so endearingly whispers.
The Islands of Aloha are whispering their message of love,
The islands are calling out to me,
Sending a sweet, sweet Aloha from up above.

This paradigm shows that the structural differences between the OB view and modern grammars are considerable. According to Edzard (2003: 93)^[6], 1st person (sg. or pl.) automatically requires ventive, and the 1st singular terminative is *muši(sic)*, where *m* is the mandatory ventive. This clearly is at variance with the placement of the ventive-*m* in the above examples from OBGT VII, §1-6. The *mu* of *mu-še* there must be the 1st singular pronoun. Genetically, the *m* of the 1st person might be identical to the ventive-*m*, but syntactically, it is kept separate by OB grammatical theory.

8.6 OBGT VII: the stative inserts.

The Oriental Institute recension (but not that from Ur) contains eight paragraphs going beyond the complete grid; they must be inserts, illustrating some exceptional features. Six of them cover stative prefixes (*al-*, *a-*, *an-*), here rendered in Akkadian by ordinary present tense constructions: VII§11 *al-du* = *illak* = “he goes”, §14 *an-du* = *illak* = “he goes”, §15 *an-ši-du* = *illakšum* = “he goes to him(n-ši)”, and analogous plural forms: VII§44 *al-su₈-be₂-eš* = *illaku* = “they go”, §47 *an-su₈-be₂-eš* = *illaku* = “they go”, §48 *a[n-ši-su₈-b]e₂-eš* = *illakušum* = “they go to him”. Note that in §14 the *n* of *an-du* does not serve as a pronoun, and similarly in §47, and since elsewhere (OBGT VI§35) also writings without *n* occur, the alternative spellings *a-*, *an-* may indicate nasalization. Therefore, whether or not we have nasalization, rather than keeping two morphemes */a/*, */an/*, I normalize them as a single morpheme */ã/*.

These morphemes here are mirrored by Akkadian present tense constructions. But that they have a stative interpretation is shown by Akkadian stative renderings occurring elsewhere, such as for */ã/* in VI§29-35 (see Section 9.4.1), and for */al/* in OBGT III. Incidentally, the pairing of lines such as OBGT III 151: *al-ḥul₂-ḥu[l₂-en]* = [*u₂-bu-ṭa*]-*a-ku* = “I am convulsed with laughter” and III 152: *nu-ḥul₂-ḥul₂-[en]* = [*u₂-l*]*a u₂-bu-ṭa-a-ku* = “I am not convulsed with laughter”, may suggest that */al/* and */nu/* were regarded as opposites with affirmative and negative function, respectively.

I conjecture that these inserts are concerned not only with Sumerian, but also with a subtle aspect of Akkadian grammar, namely whether the verb *alākum* admits a stative. What is at issue here is whether *alik* in passages such as *alik ḥarrāna* “he knows the route” (Gilgameš Y, vi 24) should be taken with GAG^[9] §77f as a stative (“he has been going”) or rather as the construct state of the verbal noun *alikum* (“one who has been going”). The latter interpretation almost certainly is the correct one. Apparently the Akkadian stative is avoided with non-resultative verbs. Mostly, it is used to render transitive verbs intransitive (*šakin* = he/it is placed), but occasionally, it is used transitively (*a-kil-a-ti* = you are devouring, AHW^[11] p. 26).

The regular stative morpheme */ã/* is treated systematically in OBGT VI, see Section 9.3. The morpheme */al/* is peculiar and in the paradigms OBGT VI-X occurs only once more in OBGT VIII, where it is contrasted with the plain */i₃/* and with */ã/*:

VIII§34	<i>i₃-ṛgu₇¹-e</i>	<i>ṛi-ik-kal¹</i>	he eats
VIII§35	<i>al-gu₇-ṛe¹</i>	<i>[i]-ik-ṛkal¹</i>	he eats
VIII§36	<i>an-[g]u₇</i>	<i>a-ṛki-il¹</i>	he is eating

Interestingly, */al/* here is rendered by the Akkadian present tense, but */ã/* by the stative. The paradigms do not permit to ascertain the precise scope of */al/*, but just as in the unilingual texts, in the few forms occurring in the paradigms no qualifiers are inserted between */al/* and the verbal base. Therefore, it may be significant that the paradigm OBGT VII offers paragraphs with indirect objects for the prefix */ã/*, but not so for the otherwise parallel */al/*.

8.7 OBGT VII: the *ittallak niāti* inserts.

These inserts (VII§71 present, §74 preterite) are particularly curious. In OBGT VII they are the only paragraphs showing Akkadian accusatives. Moreover, they are the only paragraphs of this paradigm that use non-ventive forms with 1st or 2nd person objects.

Edzard (2003: 93)^[6] claimed that 1st person (sg. or pl.) automatically requires ventive. In OBGT VII this is true for motion *toward* the 1st person (as well as for motion toward the 2nd person), but *not* for motion away from. The latter point is made explicit in these curious ablative inserts.

As already mentioned, OBGT VII does not use the terminative case marker /ši/ with plural objects.

The regular paragraphs of the grid combine the Akkadian dative with the Akkadian and Sumerian ventive:

VII§69	am ₃ -me-du	<i>i-il-la-kam ni-a-ši</i>	he comes to us
	am ₃ -me-du-un	<i>ta-al-la-kam ni-a-ši</i>	you come to us
	mu-e-ne-du	<i>i-il-la-kam ku-nu-ši</i>	he comes to you(pl.)
	mu-e-ne-du-un	<i>a-al-la-kam ku-nu-ši</i>	I come to you(pl.)
VII§70	am ₃ -ma-me-du	<i>it-tal₂-la-kam ni-a-ši</i>	he comes away to us
	am ₃ -ma-me-du-un	<i>ta-at-tal₂-la-kam ni-a-ši</i>	you come away to us
	am ₃ -mu-e-ne-du	<i>it-tal₂-la-kam ku-nu-ši</i>	he comes away to you(pl.)
	am ₃ -mu-e-ne-du-un	<i>at-tal₂-la-kam ku-nu-ši</i>	I come away to you(pl.)

The immediately following insert on the other hand offers non-ventive forms combined with exceptional Akkadian accusatives. Thus, we have the present tense forms

VII§71	ba-me-du	<i>it-tal₂-lak ni-a-ti</i>	he goes away from us
	ba-me-du-un	<i>ta-at-tal₂-lak ni-a-ti</i>	you go away from us
	ba-e-ne-du	<i>it-tal₂-lak ku-nu-ti</i>	he goes away from you(pl.)
	ba-e-ne-du-un	<i>at-tal₂-lak ku-nu-ti</i>	I go away from you(pl.)

and the regular preterite tense forms §72-73 are followed by the insert

VII§74	ba-m[e]-gen	<i>it-ta-lak ni-a-ti</i>	he went away from us
	ba-[me-g]en-en	<i>ta-at-ta-lak ni-a-ti</i>	you went away from us
	ba-[e-n]e-gen	<i>it-^rta¹-lak ku-nu-ti</i>	he went away from you(pl.)
	b[a-e-n]e-gen-en	<i>at-ta-lak ku-nu-ti</i>	I went away from you(pl.)

The interpretation of the Akkadian accusative as an ablative is due to Jacobsen (1960)^[13], (1963)^[14].

Since OBGT VII does not use the terminative case morpheme /ši/ with plural objects, in the absence of the ventive the direction of the motion thus remains unspecified. In consequence ba-ne-du then defaults to motion *toward* the 3rd person object:

VII§88	ba-ne-du	<i>it-tal₂-lak šu-nu-ši</i>	he goes away to them.
--------	----------	--	-----------------------

But ba-me-du cannot denote motion *toward* a 1st person object (this would require the ventive, as in §70), therefore it must default to motion *away from*.

What is the likely motivation for these inserts? I suspect an important purpose was to highlight the difference in interpretation between ba-me-du and the deceptively similar ba-ne-du.

Furthermore, the insert highlights that the terminative /ši/ implies motion *toward* the person(s), while the unmarked case (which I take to be a locative) used with plural objects is neutral with regard to direction. In other words, with verbs of motion the locative can denote both the start and the end point of the motion and thus can have both ablative and terminative function. See also the discussion of the terminative case in Sections 5 and 6.3.

9 OBG VI and X: transitive verbs.

The paradigms OBG VI and X cover the verbs *gar* = *šakānum* = “to place, to put” and *gub* = *izuzzum*, *uzuzzum* = “to stand”, respectively. They treat central concerns of Sumerian verbal morphology, in particular the so-called conjugation prefixes, the pronouns and cases, and stative and causative constructions.

These two paradigms are not as systematically structured as OBG VII, are not nearly as complete, and also seem to contain more scribal errors. They share a common grid structure, at least its systematic part, but X offers only the first line of each paragraph. In Appendix A the lines of X are cross-referenced to the corresponding paragraphs of VI. We note that with the exception of the last five lines, all lines of X are matched in order to a paragraph of VI. Both paradigms have didactic additions, but VI has more. The existence of an underlying strict common grid structure had escaped Black (1991: 12-14)^[3], who had described the two paradigms as “diffuse”. Recognition of this grid structure, combined with the subsequent analytic separation of the inserts from the systematic grid, had been the crucial ingredient for the understanding of the paradigms. This common grid is organized according to aspect and tense, in the order: Non-indicative (imperative, volitive, precative), stative, preterite.

Curiously, the two verbs are treated almost exactly in parallel, and both, not only *gar* “to put”, but also *gub* “to stand”, mostly are constructed transitively. This is not visible in the Akkadian column, since it consistently omits reference to a direct object, but the Sumerian has forms such as X 7: *gub-ma-ab* = *izizzam* = “stand here!”, with an impersonal direct object /b/. How should one interpret the latter? According to the common grid this line is parallel to VI§7: *gar-ma-ab* = *šuknam* = “place it(b) here!”. Perhaps one should interpret *gub*, with Sumerian direct object /b/, as “to stand” = “to put them (viz. the feet)”, but this fails in X 19: *gub-ni* = *i-zi-iz*, Akk. “stand!”, Sum. “stand him!”. Apparently, *gub* can be used in the sense “to put up”, “to erect”, but in standard Akkadian one then prefers to use the Š-stem *ušuzzum*, if this meaning is intended. See also Edzard’s note (2003: 71)^[6] on *gub*. Correspondingly, my English translations of OBG X in Appendix A are very hesitant.

The most interesting differences between OBG VI and X concern inserts with N-stem imperatives (VI§22-26), irregular constructions with Gt-stems (VI§27-28), and Nt-stem forms with stative function (VI§56-57 and §64-65), all of them absent in X. Together with some other peculiarities the differences are listed in Section 9.1.1.

My discussion concentrates on OBG VI. The systematic grid of that paradigm is contained in paragraphs VI§1-20, 29-55, 58-63, 72-76, see the overview of the Sumerian forms in Section 9.1. With the exception of VI§17-18, §31 and §72 (possibly accidental omissions in X), these systematic parts are covered by both texts.

Here are some remarks on details of the structure of the systematic grid. Most of its entries conform to the pattern described in Section 6 and need no individual discussion.

Admittedly, some problems must be left open. For example, the direct object marker /b/ often is absent, and the paradigms do not allow to discriminate whether this is due to phonetic issues, or whether self-evident markers are optional, or whether there is a difference in meaning (“place it” versus “place yourself”).

The initial parts both of the non-indicative and of the stative and indicative sections (§1-12 and §29-71 respectively) have a strict Akkadian grid structure, see the overview in Section 9.1. The paragraphs alternate between G- and Š-stems. The G-Š-pairs are grouped in three groups: the first covering forms without indirect objects, the second with 3rd person accusatives and the third with 3rd person datives.

The paragraphs with 1st and 2nd person indirect objects are incomplete and more loosely grouped. One wonders whether those paragraphs had been added as afterthoughts.

The variable Sumerian rendering of Akkadian cases is interesting. In the indicative section the Akkadian accusative throughout is rendered by the Sumerian comitative (da, di). In the non-indicative section, the causative paragraphs render the Akkadian accusative by the Sumerian subordinative (3rd ni, 1st mu, 2nd ri), while the non-causative paragraphs render it by the Sumerian comitative (da), with the exception of an imperative form in VI§17, see Section [12.3](#). The Akkadian dative is rendered by the Sumerian dative (3rd na or nna, 1st ma-ra, 2nd ra), apart from VI§70-71, where the terminative (ši) is used.

The most striking aspect of this paradigm is the systematic layout of the conjugation prefixes in the segment covering stative and indicative forms (VI§29-71). This layout is clearly visible in the overview of Section [9.1](#) and will be discussed in detail in Section [9.3](#).

9.1 OBGT VI: the grid structure of the paradigm.

Non-indicative forms of OBGT VI.

The last column gives the stem (G or Š), and the person and case of the Akkadian object (A accusative, D dative). A comparison with OBGT X makes clear that §73-76 should be regarded as pairs of paragraphs with G- and Š-forms, respectively, collapsed into a single paragraph.

⁵ See Section 9.2.1.

⁶ Expected: in-gar.

⁷ Expected: i₃-bi₂-in-gar, with infix conjugation. The text instead has three paragraphs §37: bi₂-in-gar, §38: bi₂-ib₂-gar, §39: mi-ni-in-gar, the second and the third with suffix(!) conjugation, with the parallels X 27: bi₂-in-gub, X 28: bi₂-ib₂-gub, X 29: mi-ni-ib₂-gub. See Section 9.4.2.

⁸ Expected i₃-da-an-gar or in-da-an-gar, in analogy to §52, 60, 68.

⁹ Expected: mu-da-an-gar or mu-un-da-an-gar, probably phonetic metathesis.

¹⁰ Expected: ba-na-ab-gar, in analogy to the pair §31-32. The parallel X 24 has an-na-ni-ib₂-gub, instead of the expected ba-na-ab-gub. See Section 9.4.1.

¹¹ With Black p. 29 we have interchanged the Sumerian lines 218 and 220.

9.1.1 Some peculiarities of OBGT VI and X.

A number of structural peculiarities are common to both VI and X. In particular, separative constructions (Akkadian t-stems, Sumerian /ba/ prefix) in the grid occur in the preterite tense, but not with stative and Ni forms. The 1st person object is only spottily covered. A few present tense forms occur, but only outside of the grid.

The Akkadian translation does not reference direct objects and does not make a distinction between the infixed markers -b- and -n-. On the Sumerian side, in VI§41 and §47, both texts use -b-, but in VI§53, 61, 69, the subject of the infix conjugation is referred to with -b-, while the corresponding lines in X use -n-. VI§39 uses -n- for an intransitive subordinate subject, the parallel text uses -b-.

After the base, imperatives insert the vowel -a-, but not before a labial. Because of this differentiation I believe that this vowel – contrary to the view of several modern grammars – is a phonological rather than a morphological feature. Presumably this -a- renders a weak vowel (i.e. a mere schwa). Thus VI§2: gar-bi₂-ib₂, X 2: gub-bi₂-ib₂ reflect the morphology BASE-/bi₂/-b/, while VI§4: gar-ra-ni-ib₂, X 4: gub-an-ni-ib₂ reflect the morphology BASE-/ni/-b/. Note that gar and gub insert the auxiliary vowel -a- in different fashions. See also the comments at the end of Section [12.4](#).

Curiously, in two lines of OBGT X, both with a non-causative accusative construction, a different Akkadian verb is used (*qu'û*, to wait, AHW^[1] p. 931, CAD^[4] p. 328):

X 3	=VI§3	gub-an-da	<i>qi₂(!)-i-šu</i>	wait with him! or: wait on him!	Ni	G		3A
X 9	=VI§9	gub-ma-da-ab	<i>qi₂-ya-aš-šu</i>	wait with him here! or: wait on him here!	Ni	G	V	3A

We list the following structural irregularities and insertions. Unless expressly noted, they are common to both VI and X; the sections where they are discussed are indicated in the last column:

VI§21	two imperatives with direct objects (gar-bi, gar-ni).	4.2, 7.1
VI§22-26	N-stem imperatives (omitted in X).	9.4.3
VI§27-28	Gt-stem imperatives, irregular Sumerian forms with -ta- (omitted in X).	9.4.4
VI§34	unexpected stative forms (an-na-ni-ib ₂ -gar instead of ba-na-ab-gar).	9.4.1
VI§35	stative forms with unusual infix conjugation.	9.4.1
VI§37	alternative version of §36 with bi ₂ -prefix.	9.4.2
VI§38-39	irregular forms, using suffix conjugation in a section with infix conjugation.	9.4.2
VI§56-57, VI§64-65	Nt-stem preterite tense forms, using suffix conjugation, apparently with stative function (omitted in X).	9.4.5
VI§72	stative forms, with irregular paragraph structure (omitted in X).	9.2.1
VI§73-76	X splits these irregular paragraphs into two lines each (non-causative + causative), so the VI versions should be regarded as merged pairs of incomplete paragraphs.	
VI§77-83	one-line paragraphs with present tense forms, N-, G-, Š-stems, some with dative objects; X omits parallels to VI§78-80, but adds 5 more lines with present tense forms at the end.	9.4.6

9.2 OBG VI: the non-indicative forms.

The non-indicative (Ni) part of OBG VI (§1-20) is clearly structured and lacks inserts. It can be seen from the listing in Section 9.1 that the forms with no object or a 3rd person object are rigorously ordered, alternating between G- and Š-stems, and between no object, accusative object and dative object. The forms with 1st and 2nd person objects give the impression of having been added as afterthoughts.

The systematic parts of OBG VI present a very “modern” aspect of linguistics: transformational grammar! For example, let us start with the basic paragraphs §1-6, 13, 14, 17, 19, then we can generate the derived paragraphs §7-12, 15, 16, 18, 20 by the ventive transformation, that is, by inserting the ventive marker /m/, plus some minor phonetic modifications; see the listing of the Sumerian forms in Section 9.1.

9.2.1 OBG VI: differentiation between ventive and 1st person dative.

In the paradigms OBG VI and X there are only three occurrences of 1st person datives: VI§13: gar-ma-ra = *šuknam* = “place (it) for me!”, the parallel X 13: gub-ma-ra = *izzam* = “stand for me!”, and VI§72: ma-gar = *šaknam* = “he is placed for me”.

A thorough discussion seems to be needed. It is necessary to pay close attention to the grid structure. What is at issue here is that in Akkadian the 1st person singular dative and the ventive coincide, and thus Akkadian cannot make a distinction between “place it here!” and “place it for me!”, both *šuknam*, nor between “he is placed here” and “he is placed for me”, both *šaknam*. On the other hand, as it seems that the Sumerian prefixes /ā/ and /m/ are mutually exclusive, there is no Sumerian counterpart to *šaknam* in the sense of “he is placed here”. The distinction between ventive and dative is not visible in the Akkadian of the first line, but must rely on the Sumerian lines two and three of the respective paragraphs, which have either ventives or 2nd person datives.

In the following discussion we shall juxtapose and compare three paragraphs: the plain ventive (VI§7), the non-ventive with 1st and 2nd person datives (VI§13), and the corresponding ventive paragraph (VI§15). See the listings in Section 9.1 and in Appendix A for the context.

VI§7 belongs to a ventive section of the paradigm (VI§7-12), where all paragraphs have clear ventives in lines 2 and 3. In particular:

VI§7	gar-ma-ab	<i>šu-uk-nam</i>	place it(b) here(m)!	Ni	G	V	
	ga-am ₃ -gar	(<i>luškunam</i>)	let me place it(b) here(m)!	Ni	G	V	
	ḥe ₂ -em-gar	(<i>liškunam</i>)	let him place it(b) here(m)!	Ni	G	V	

Here, the m of gar-ma-ab must be a ventive /m/. In the second and third line the direct object /b/ seems to have been assimilated to the preceding ventive /m/ (unless the constructions are meant to be reflexive: “let me place myself here!”).

On the other hand, VI§13 belongs to a non-ventive section (VI§13-14) and has dative constructions in lines 2 and 3, hence line 1 should contain a dative construction as well:

VI§13	gar-ma-ra	<i>šu-u[k-na]m</i>	place (it? yourself?) for me(ma-ra)!	Ni	G		1D
	ga-ra-ab-gar	(<i>luškukkum</i>)	let me place it(b) for you(ra)!	Ni	G		2D
	ḥa-[r]a-ab-gar	(<i>liškukkum</i>)	let him place it(b) for you(ra)!	Ni	G		2D

This paragraph must be contrasted with the corresponding VI§15 in the ventive section (VI§15-16):

VI§15	g[a]-mu-ra-ab-gar	<i>l[u-u]š-ku-na-ak-ku[m]</i>	let me place it(b) for you(ra) here(m)!	Ni	G	V	2D
	[ḥ]u-mu-ra-ab-gar	(<i>liškunakkum</i>)	let him place it(b) for you(ra) here(m)!	Ni	G	V	2D

We note that in the paradigm the first line gar-ma-ra of VI§13 is placed in the *non-ventive* section, and not in the *ventive* VI§15, where the corresponding 1st person entry is missing (it should contain

“place it for me here”, which however cannot be expressed in Akkadian). It follows that the OB grammarian regarded gar-ma-ra not merely as some dative construction, but as a *non-ventive* dative construction. Thus, in the opinion of the OB grammarian the m of ma here is *not a ventive-m* but a 1st person dative-m. This is contrary to the opinion of most modern grammarians, who regard the /m/ of the dative /ma/ as a mandatory ventive. In other words, the OB grammarian differentiates between the Sumerian ventive and the 1st person dative and uses -ma-ra (probably to be read as -mra-) for the 1st person dative. Black (1991: 19)^[3] had been tempted to emend gar-ma-ra to gar-ma-ab, but OBGT X confirms the writing -ma-ra by offering the parallel forms:

X 7: gub-ma-ab = *i-zi-iz-za-am* = stand it here!

X 13: gub-ma-ra = *i-zi-iz-za-am* = stand for me!

The unilingual evidence suggests that ordinarily the 1st person dative is written merely ma. I conjecture that in VI§13 ma-ra may have been used for emphasis and clarity.

As far as I see, the only other 1st person Sumerian dative in the OBGT paradigms occurs in VI§72, a paragraph with stative forms and dative personal objects (omitted in OBGT X):

VI§72	「ma-gar ¹	「ša-ak-nam ¹	he(ø) is placed for me(ma)	St	G		1D
	「a-ra-gar ¹	「ša-ak-na-ak(?) -kum ¹	he(ø) is placed for you(ra)	St	G		2D
	a-「ra-gar-re-en ¹	「ša-ak-na-ak-kum ¹	I(en) am placed for you(ra)	St	G		2D

This paragraph presents some tricky problems. The first line seems to have a non-stative Sumerian form in the midst of Sumerian and Akkadian stative constructions. The second and third lines clearly are stative constructions with a 2nd person dative object, both in Sumerian and Akkadian, and the Sumerian forms are non-ventive. Therefore one expects that the first line offers a stative construction with a 1st person dative object (and, most likely, a 3rd person subject): “he is placed for me”. This implies a conjectured morphology */ā/-/ma/-/gar/, and ma-gar might be a defective writing for this, rather than an erroneous repetition of the non-stative ventive construction occurring in VI§66: ma-gar = (*aškunam*) = “I placed (it) here”.

On the Akkadian side, we have three stative constructions. The third line corresponds exactly to the Sumerian: “I am placed for you” (*šaknāku + kum*). The second Akkadian line is problematic. The (damaged) text seems to have the ventive form “he is placed for you here” (*šaknam + kum*). Black (1991: 36)^[3] proposed to emend it to *šakikkum* (= *šakin + kum*), which corresponds to the second Sumerian line “he is placed for you”. The Akkadian of the first line is ambivalent, either with ventive “he is placed here”, or with 1st person dative “he is placed for me”. The latter interpretation corresponds to what we would expect both from the Sumerian and the Akkadian stative datives of lines two and three.

In view of all this I believe – even if the stative prefix /ā/ is absent in the writing – that the form ma-gar represents the OB grammarian’s best effort to fill a stative cell of the grid with a 1st person dative.

9.2.2 OBGT VI: the causative pronominal prefixes.

The clearest correspondence between Sumerian and Akkadian transitive causative constructions is obtainable from the Ni section of OBGT VI, as follows:

VI§2: gar-**bi**₂-ib₂ = *šuškin* = make **someone** place it!

VI§4: gar-ra-**ni**-ib₂ = *šuškiššu* = make **him** place it!

VI§19: gar-**mu**-ub = *šuškinanni* = make **me** place it!

ga-**ri**-ib₂-gar = (*lušašikika*) = let me make **you** place it!

The four pronouns used in causative function by the paradigms thus are: /bi₂/ (3rd non-person), /ni/ (3rd person), /mu/ (1st), /ri/ (2nd). Additional evidence for the causative use of /ri/ can be found in Section 10.5.2. There is a complication: in the paradigms, /ni/ sometimes is mirrored by an Akkadian -š_u, sometimes not. The seeming exceptions are cases where the writing bi₂ has been changed to ni by dissimilation after labial + vowel. For the evidence of the paradigms see Section 9.2.3 and the more detailed discussion in Huber (2007: 13-14)^[11].

This dissimilation was first claimed by Falkenstein (1949: 205-207)^[8] for unilingual texts, but negated by later authors (e.g., Edzard 2003: 102, to quote the most recent discussion)^[6]. Note that the dissimilation acts only on bi₂, not on bi; what confuses the situation is that some unilingual texts use the two signs interchangeably. In the paradigms there are no instances of labial + vowel followed by bi₂ (nor are there in ETCSL^[7], where a search turned up only a single, rather atypical and irrelevant instance: ur-za-ba-bi₂-tum, a kind of musical instrument).

Intransitive causatives are rare and show a different construction; an example is given in Section 7.2, and they are further discussed in Section 9.4.2.

9.2.3 OBG VI: dissimilation of bi₂ to ni after labial + vowel.

The clearest evidence for this dissimilation is furnished by the Ni section of OBG VI. The paragraphs VI§1-6 and VI§7-12 are strictly parallel: the second group is generated from the first by the ventive transformation, that is by insertion of the ventive marker /m/. VI§2 and VI§4 have an impersonal and a personal subordinate subject, respectively:

VI§2	gar-bi ₂ -ib ₂	^r š _u ¹ -uš-ki-in	make someone(bi ₂) place it(b)!	Ni	Š		
VI§4	gar-ra-ni-ib ₂	[š _u š _{ki} š _u] ¹²	make him(ni) place it(b)!	Ni	Š		3A

The ventive transformation results in identical Sumerian forms VI§8 and VI§10::

VI§8	gar-ma-ni-ib ₂	š _u -uš-ki-nam	make someone(bi ₂ !) place it(b) here(m)!	Ni	Š	V	
VI§10	gar-ma-ni- ^r ib ₂ ¹	[š _u -uš-ki-na-a]š-š _u	make him(ni) place it(b) here(m)!	Ni	Š	V	3A

In §8 one would have expected *gar-ma-bi₂-ib₂. The same phenomenon, that is dissimilation of bi₂ to ni after labial + vowel, is in evidence also elsewhere. Though, the evidence of the other paradigms is not as clear-cut, since their underlying grid is not as rigorous as in OBG VI. Here are a few examples, first a group with non-indicative forms:

IX§3	sa ₂ du ₁₁ -ga-bi ₂ - ^r ib ₂ ¹	š _u -uk-š _i - ^r id ¹	make someone reach!	Ni	Š		
IX§7	sa ₂ du ₁₁ -ga-am ₃ - ^r mi-ib ₂ ¹	^r š _u -uk-š _i -dam ¹	make someone reach here!	Ni	Š	V	
IX§12	sa ₂ ^r du ₁₁ -ga-ba ¹ -ni-ib ₂	š _u -ta-ak-š _i -id(!)	make someone reach away!	Ni	Š _t		
IX§16	^r sa ₂ du ₁₁ -ga ¹ -a[m ₃ -ma]- ^r ni-ib ₂ ¹	^r š _u -ta ¹ -ak-š _i -dam	make someone reach away here!	Ni	Š _t	V	

This group illustrates the assimilation of bi₂ to /m/ (in IX§7), and the dissimilation of bi₂ to ni (in IX§12 after /ba/ and in IX§16 after /mma/). Then a group with indicative forms:

IX§30	^r sa ₂ ma ¹ -ni-ib ₂ -du ₁₁	u ₂ -ša-ak-š _i -dam	somebody made someone reach here	Pt	Š	V	
IX§24	^r sa ₂ ba ¹ -ni-ib ₂ -du ₁₁	uš-ta-ak- ^r š _i ¹ -id	somebody made someone reach away	Pt	Š _t		
IX§39	sa ₂ im-ma-ni-in-du ₁₁	uš-ta-ak-š _i -dam	he made someone(bi ₂) reach away here	Pt	Š _t	V	

This group illustrates the dissimilation of bi₂ to ni (in IX§30 after /ma/, in IX§24 after /ba/, and in IX§39 after /mma/).

¹² Restoration of the Akkadian in §4 is certain in view of the parallelism of §1-6 with §7-12.

9.3 OBG VI: regular indicative forms and the conjugation prefixes.

Apart from a few disturbances by inserts, the central part of the paradigm, with 3rd person objects, is strictly organized. But again, the forms with 1st and 2nd person objects are treated only spottily (there is only a single instance of a 1st person, in the irregular paragraph VI§72), and they give the impression of having been added as afterthoughts.

This systematic central part of the grid, ranging from VI§29-71, provides an admirably clear segmentation of the so-called “conjugation prefixes”, somewhat different from the modern views. This part of the grid treats the indicative forms in six separate groups of six paragraphs each, see the table in Section 9.1.

From the point of view of the Akkadian grid structure each group covers the six possible combinations of non-causative and causative, no object, accusative object and dative object: G, Š, G-3A, Š-3A, G-3D, Š-3D. Note the regular alternation between G- and Š-stems, and accusative and dative. The six groups themselves are concerned with, in this order:

§29-34:	Stative	prefixes /ā/, /ba/
§36-43:	Preterite	prefix /i ₃ /
§44-49:	Preterite	prefix /mu/
§50-55:	Preterite + t-stem	prefix /ba/
§58-63:	Preterite + t-stem + ventive	prefix /mma/ (written im-ma-)
§66-71:	Preterite + ventive	prefix /m/ (written ma-)

Apart from an insert inside of the /i₃-group (§37-39), the inserts are between the groups (§35, §56-57, §64-65).

In distinction to the other five groups, the stative group on the Sumerian side uses *suffix* conjugation. The stative group distinguishes between the regular stative prefix /ā/, written a- or an- (which may suggest nasalisation), and the stative/passive /ba/, with forms such as §29 an-gar = *šakin* = “he(ø, suffixed) is placed”, and §30 ba-ab-gar = *šuškun* = “he(ø, suffixed) was placed by someone(b)”. Immediately after the regular stative group there is an interesting insert with *infix* conjugation, presumably indicating transitive preterite tense constructions: §35 ab-gar = *šakin* = “someone(b) had been placing it”, a-gar = “I(ø) had been placing it”, e-gar = “you(ā-e > e) had been placing it”. Similar constructions occur in IX§37, see Section 10.5.4. The Akkadian stative is indifferent with regard to tense.

The /i₃-prefix group (§36-43) contains an insert with /bi₂-prefixes in its midst. This gives a total of nine conjugation prefixes:

stative (/ā/, (/al/), /ba/), main (/i₃/, /bi₂/, /mu/), directional (/m/, /ba/, /mma/).

Apparently the nine prefixes are considered to be mutually exclusive – at least they are treated as such in our paradigms – but possibly their number should be reduced. Note that /al/ does not occur in OBG VI. While it can be rendered by an Akkadian stative, it is somewhat special (compare the comments made in Section 8.6) and possibly should not have been included in the above enumeration; therefore I enclosed it in parentheses. While the paradigm treats /mma/ as a separate prefix, it is a combination of /m/ and /ba/ (see the discussion in Section 8.4).

In the paradigms /ba/ has at least three distinguishable uses: separative (passim, mirrored by Akkadian t-stems), stative/passive (in VI§29-34, mirrored by Š-stem statives, see Section 9.4.1), and straight passive (in the insert VI§22-26, mirrored by N-stems, see Section 9.4.3). The question is whether – in the view of an OB grammarian – there are two distinct, homophonous morphemes /ba/, one with separative, the other with passive meaning, or whether there is a single morpheme having disjoint

scopes (to be mirrored by disparate Akkadian morphologies). The Nt-stem inserts (see Section 9.4.5) combine the separative and the passive uses and may argue in favor of the latter alternative.

9.3.1 On the use of the conjugation prefixes.

This discussion is based on the paradigms and by necessity is somewhat speculative – absence of a feature in the paradigms does not imply its non-existence.

The nine conjugation prefixes seem to be mutually exclusive. Apparently, indicative forms must use one of them, with /i₃/ being a kind of default prefix. Non-indicative forms need not use any, but can only use directional prefixes.

The three **directional prefixes** /m/, /ba/ and /mma/ present the fewest problems. They have already been discussed in Section 8.4. Even though /mma/ is regarded as a composite of /m/ and /ba/, the three apparently are treated as separate and independent prefixes. For verbs of motion (“to go”, “to run”), the meaning of the directional prefixes is made clear by the paradigms, especially OBG VII. For other verbs, such as for gar = *šakānum* = “to put”, the interpretation of forms such as

VI§59	ṛim-ma-ni-in ¹ -gar	uš-ta-aš-ki-nam	he(n) caused someone(bi ₂ >ni) to put it away(ba) here(m)
-------	--------------------------------	-----------------	--

is less certain. I opted for a mechanical rendering of /m/ by “here” and /ba/ by “away”.

Among the **stative prefixes**, the alternative writing a- and an- of the regular stative prefix suggests nasalization. Whether or not this is so, I standardize it as /ã/. There is no discernible difference of meaning between /ã/ and /al/, except that the latter does not seem to precede pronominal prefixes.

With transitive verbs the stative prefix /ã/ can be used both intransitively (with suffix conjugation, VI§29) and transitively (with infix conjugation, VI§35 and IX§37), where the infix conjugation suggests a transitive preterite tense interpretation. With intransitive verbs, the Sumerian stative constructions are matched to Akkadian present tense constructions – apparently Akkadian avoids statives of intransitive verbs. The Akkadian stative is indifferent with regard to tense.

The prefix /ba/ is used for stative/passive constructions, in Akkadian rendered by Š-stem statives. For some curious constructions see Section 9.4.1 and Section 9.4.5.

The **main prefixes** /i₃/, /bi₂/ and /mu/ leave open problems. The Akkadian translations do not distinguish between them. The prefix /i₃/ has the widest range of usage, both with transitive and intransitive constructions, and it seems to act as a default prefix, to be used when the basic, unmodified meaning of the verb is intended. In the paradigms, /mu/ is used exclusively with transitive constructions, mostly with the preterite tense, but there is also a single occurrence with the present tense:

VIII§14	ṛkas ₄ mu-ši-ib ₂ ¹ -be ₂	i-la-ṛsum ₂ ¹ -šum	he(ø) runs to him(n-ši)
---------	---	--	-------------------------

The mu- here is *not* the ventive, the ventive version occurs two paragraphs further down as:

VIII§16	ṛkas ₄ am ₃ -ši ¹ -i[b ₂ -b]e ₂	[i-la-s]u-ma-aš-šum	he(ø) runs to him(n-ši) here(m)
---------	--	---------------------	---------------------------------

The morphology of VIII§14 appears to be /mu/-/n/-/ši/-/b/-/e/-/e/, and that of VIII§16 /m/-/n/-/ši/-/b/-/e/-/e/, where /b/ references the direct object kas₄, /e/ is the *marû*-base of du₁₁, and the assimilated second /e/ refers to the transitive subject. Note that the /mu/-prefix always is spelled mu, whereas the ventive /m/ admits a variety of different spellings.

According to OBG VI, VIII and IX, the prefix /bi₂/ can alternate with /i₃/, see Sections 9.4.2 and 10.1. In distinction to the other prefixes, there are no instances of /bi₂/ with an indirect object. But /bi₂/ can be followed by the homophonic/homographic subordinate subject marker /bi₂/; the combination then is dissimilated: bi₂-bi₂ > bi₂-ni > mi-ni. Constructions such as bi₂-in-gar and bi₂-ib₂-gar are

ambivalent. They treat the personal infix /n/ preferentially as the active subject (“he(n) placed it”), whereas the impersonal infix /b/ preferentially is treated as a subordinate subject suffering the action (“he(ø) had it(b) placed”). See Section 9.4.2 for details.

I wonder whether the prefixes /mu/ and /bi₂/, while not exactly parallel, might have opposite functions, the former referring in an unspecified fashion to “me/here”, the second to “them/there”. But this is pure speculation.

9.4 OBGT VI: inserts and other irregularities.

Both OBGT VI and OBGT X contain inserts, but VI has more. Some can be recognized because they do not occur in X, but some only because they go beyond the grid.

9.4.1 OBGT VI: unexpected stative constructions.

The regular stative section (VI§29-34) uses suffix conjugation and thus, presumably, intransitive constructions, and in the first five paragraphs alternates between the prefixes /ã/ and /ba/:

VI§29	an-gar	<i>ša-ki-in</i>	he(ø) is placed	St	G		
VI§30	ba-ab-gar	<i>šū¹-uš-ku-un</i>	he(ø) was placed by someone(b)	St	Š		
VI§31	an-da-gar	<i>ša-ki-iš-šu</i>	he is placed with(da) him(n)	St	G		3A
VI§32	ba-da-ab-gar	<i>šu(!)-uš-ku-un-šu(!)</i>	he was placed with him by someone	St	Š		3A
VI§33	an-na-gar	<i>šā¹-ki-iš-šum</i>	he is placed for him(na)	St	G		3D

Note that the -n- in VI§29 has no morphological function and implies nasalization.

In the sixth paragraph VI§34 one would expect three-participant constructions

ba-na-ab-gar	= <i>šuskunšum</i>	= he(ø) was placed for him(na) by someone(b),
ba-na-ab-gar-re-en	= <i>šuškunakšum</i>	= I(en) was placed for him(na) by someone(b),
ba-na-ab-gar-re-en	= <i>šuškunassum</i>	= you(en) were placed for him(na) by someone(b),

with suffixed subjects. Instead, the text has

VI§34	an-na-ni- ¹ ib ₂ -gar	<i>šu-uš-ku-un-šum</i>	he was placed for him (by someone)	St	Š		3D
	an-na-ni- ¹ ib ₂ -gar-re-en	<i>(šuškunakšum)</i>	I was placed for him (by someone)	St	Š		3D
	an-na-ni- ¹ ib ₂ -gar-re-en	<i>(šuškunassum)</i>	you were placed for him (by someone)	St	Š		3D

The English translations here render the Akkadian version.

Remarkably, OBGT X shows the identical anomaly: it first offers forms parallel to VI§29-33 (accidentally skipping §31), and then with X 24: an-na-ni-ib₂-gub it offers a form parallel to VI§34.

The Sumerian constructions have four(!) participants, one participant too many for intransitivity. On the face of it, we seem to have a present tense transitive construction with suffix conjugation. A present tense interpretation is made feasible by the fact that OBGT VI uses the *hamtu* base /gar/ with the present tense also in VI§77-83 (see Section 9.4.6). Admittedly, one then would expect the first line to end in -re. With such a four participant interpretation we would have a dative 3rd person object(na), a subordinate transitive subject(ni), an impersonal direct object(b), and a suffixed personal subject he/I/you(ø/en/en). The Sumerian of the first line of the paragraph involves three different 3rd persons, and for added clarity I base the following discussion on the second line, whose meaning then would be: “I(en) cause him₁(ni) to place someone(b) for him₂(na)”. This does not match the meaning implied by the Akkadian version: “I was placed for him”. Therefore, I prefer an alternative preterite tense interpretation with infix conjugation, implying that the roles of subject and direct object must be reversed. In other words, I prefer to analyze this second line as: “someone(b) caused him₁(ni) to place me(en) for him₂(na)”. If this is so, then the constructions indeed are transitive, but the suffixed pronouns, while being logical subjects, grammatically are direct objects. With this grammatical

interpretation (but not if we take the suffixed pronouns as subjects) we actually get the expected meaning, namely that the logical subject (he/I/you) is the person that was placed.

VI§35 is an insert, which curiously offers stative constructions with infix conjugation. Comparative full listings, including the parallel entries of OBG X, of the regular paragraph and the insert are instructive:

VI§29	an-gar	<i>ša-ki-in</i>	he(ø) is placed	St	G		
	an-gar-re-en	(<i>šaknaku</i>)	I am placed	St	G		
	an-gar-re-en	(<i>šaknata</i>)	you are placed	St	G		
X 20	an-gub	<i>na-zu-uz</i>	he is standing	St	G		

The morphology is /ã/-/gar/-/ø/, /ã/-/gar/-/en/, /ã/-/gar/-/e/-/en/.

VI§35	ab-gar	<i>ša-ki-in</i>	someone(b) had been placing it	St	G		
	a-gar	(<i>šaknaku</i>)	I(ø) had been placing it	St	G		
	e-gar	(<i>šaknata</i>)	you(e < ã-e) had been placing it	St	G		
X 25	ab-gub	<i>na-zu-uz</i>	it has been stood	St	G		

The morphology is /ã/-/b/-/gar/-/ø/, /ã/-/ø/-/gar/-/ø/, /ã/-/e/-/gar/-/e/-/en/.

Only the first lines are translated (*ša-ki-in*, *na-zu-uz*). The forms in VI§35 and X 25 presumably must be interpreted as transitive preterites: “someone had been placing it”, “I had been placing it”, “you had been placing it”. An analogous transitive construction with infix conjugation occurs in IX§37, see Section [10.5.4](#).

Furthermore it is interesting to contrast the stative/passive paragraph

VI§30	ba-ab-gar	<i>š^u-uš-ku-un</i>	he(ø) was placed by someone(b)	St	Š		
	ba-ab-gar-re-en	(<i>šuškunaku</i>)	I(en) was placed by someone(b)	St	Š		
	ba-ab-gar-re-en	(<i>šuškunata</i>)	you(en) were placed by someone(b)	St	Š		

with a causative paragraph to be treated in the next section:

VI§38	bi ₂ -ib ₂ -gar	<i>u₂(!)-ša-aš-ki-in</i>	he(ø) had it(b) placed	Pt	Š		
	bi ₂ -ib ₂ -gar-re-en	(<i>ušaškin</i>)	I(en) had it(b) placed	Pt	Š		
	bi ₂ -ib ₂ -gar-re-en	(<i>tušaškin</i>)	you(en) had it(b) placed	Pt	Š		

In view of the suffix conjugation all Sumerian forms appear to be preterite tense intransitive causative constructions. In both paragraphs the primary subject is suffixed, the subordinate subject (b) infixed. But the constructions have a different deep structure. In the first, the subordinate subject does the placing, in the second it is the thing or person being placed. I believe that the paradigms here illustrate differentiations of focus, comparable to the English differences between “someone placed him”, “he was placed by someone”, “someone had him placed”, and the like.

The stative/passive constructions employed in this section of the paradigm are somewhat awkward, since neither their Sumerian nor their Akkadian corresponds to a genuine agent-less stative/passive, but rather to a passive with an explicit (Sumerian) or implicit (Akkadian) agent. I believe the reason for this is that the grid of the paradigm forced a regular alternation between Akkadian G and Š stems. See also the comments on the agent-less VI§56: ba-gar = *ittaškan* = “he was put away” in Section [9.4.5](#).

Furthermore, I should mention that two remarkable stative constructions with suffix conjugation occur in VIII§13: kas₄ ab-be₂ = *ilasum* = “he runs” and in IX§33: sa₂ an-e = *ikaššad* = “he reaches”, the first transitive (/an/-/b/-/e/-/e/) with a direct object /b/ referring to kas₄, the second intransitive (/an/-/e/-/ø/). See Section [10.5.3](#).

9.4.2 OBGT VI: the bi_2 -inserts and intransitive constructions.

After the non-causative $/i_3/$ -prefix paragraph with infix conjugation

VI§36	i_3 -gar	<i>iš-ku-un</i>	he(n, elided) placed it(\emptyset)	Pt	G		
-------	------------	-----------------	--	----	---	--	--

one would have expected a causative $/i_3/$ -prefix paragraph, also with infix conjugation. I would have reconstructed it as

i_3 - bi_2 -in-gar = *ušaškin* = he(n) made someone(bi_2) place it(\emptyset).

This expected form is found by taking the parallel entry §45: mu-ni-in-gar in the $/mu/$ -prefix section, then undoing the $bi_2 > ni$ dissimilation and finally replacing mu- by i_3 -. It is curious that such a paragraph was omitted.¹³ Instead, there is a three-paragraph insert:

VI§37	bi_2 -in-gar	<i>iš-ku-un</i>	he(n) placed it(\emptyset)	Pt	G		
	bi_2 -gar ¹	(<i>aškun</i>)	I(\emptyset) placed it(\emptyset)	Pt	G		
	bi_2 -gar	(<i>taškun</i>)	you(e, assimilated) placed it(\emptyset)	Pt	G		
VI§38	bi_2 - ib_2 -gar	<i>u_2(ʹ)-ša-aš-ki-in</i>	he(\emptyset) had it(b) placed	Pt	Š		
	bi_2 - ib_2 -gar-re-en	(<i>ušaškin</i>)	I(en) had it(b) placed	Pt	Š		
	bi_2 - ib_2 -gar-re-en	(<i>tušaškin</i>)	you(en) had it(b) placed	Pt	Š		
VI§39	mi-ni-in-gar	<i>u_2-ša-aš-ki-in</i>	he had him(n) placed by someone($ni < bi_2$)	Pt	Š		
	mi-ni-in-gar-re-en	(<i>ušaškin</i>)	I(en) had him(n) placed by someone($ni < bi_2$)	Pt	Š		
	mi-ni-in-gar-re-en	(<i>tušaškin</i>)	you(en) had him(n) placed by someone($ni < bi_2$)	Pt	Š		

My English translations are somewhat conjectural and shall be explained below.

OBGT X 27-29 offers a parallel passage: bi_2 -in-gub, bi_2 - ib_2 -gub, mi-ni- ib_2 -gub, all three translated as *uš-zi-iz* “someone made it stand”. A comparison with VI§37 indicates that the Akkadian translation in X 27 must be a scribal error for *iz-zi-iz*. Note also that X 29 has “someone(b)” instead of “him(n)”.

I believe that these three paragraphs are a didactic insert, designed to illustrate three contrasts.

The first contrast is between VI§36: i_3 -gar and VI§37: bi_2 -in-gar, both with infix conjugation and both translated *iškun*. It shows that the prefixes $/i_3/$ and $/bi_2/$ must be very nearly synonymous.

The second contrast is between VI§37: bi_2 -in-gar = *iškun*, with infix conjugation, and VI§38: bi_2 - ib_2 -gar = *ušaškin*, with suffix conjugation. The (Akkadian) preterite tense and the (Sumerian) suffix conjugation together imply intransitivity, and therefore the infixed $/b/$ denotes a subordinate subject. In this construction the subordinate subject is the patient rather than the agent, see also the remarks at the end of Section 6.2. The existence of intransitive constructions of transitive verbs is confirmed by other occurrences in OBGT VIII and IX, see Section 7.2 and further comments in Section 10.

The deceptively similar Sumerian forms in the first lines of VI§37 and 38 also may highlight a possible peculiarity of the Sumerian ergative construction, namely that the impersonal $/b/$ is shunned as the primary subject of simple transitive verb phrases. But it can be used as such in composite constructions, as in VI§47: mu-di-ni- ib_2 -gar = *ušaškiššu* = “someone(b) caused him₁(ni) to place it with him₂(di)”.

The third contrast is between VI§38: bi_2 - ib_2 -gar and VI§39: mi-ni-in-gar, both with suffix conjugation and both translated *ušaškin*. Note that the parallel X 29: mi-ni- ib_2 -gub has an impersonal infixed pronoun. How should one interpret the mi-ni- of VI§39 and X 29?

Arguing solely on the basis of the paradigms, I conclude that §39: mi-ni-in-gar cannot be a mere phonetic variant of §45: mu-ni-in-gar (also *ušaškin*), since the former uses suffix conjugation and the latter infix conjugation. Nor does the OB grammarian interpret the m of mi as a ventive. But, given that §39 occurs in an insert with $/bi_2/$ -prefix forms, one might have mi-ni- $<$ bi_2 -ni-. This agrees with

¹³ A search through ETCSL^[7] gave several good instances of this construction, for example i_3 - bi_2 -gu₇ “you fed them”, literally: “you made them(bi_2) eat” (c536.D.78).

the opinion of modern grammarians, which is based on a distributional argument (in the unilingual texts the occurrences of *mi-ni-* would serve as the missing **bi₂-ni-* forms); compare Postgate (1974: 21-22)^[19] and the discussion in Thomsen (1984: 177)^[21]. However, */ni/* cannot be a definite personal pronoun here, because then the Akkadian would have to refer to it by a pronoun, and the translation would be *ušaškiššu* or *ušaškiššum*, not *ušaškin*. The conclusion is that *mi-ni* hides a doubly dissimilated *bi₂-bi₂ > bi₂-ni > mi-ni*. Thus, *mi-ni-in-gar* with suffix conjugation seems to express a double causative, or better: a construction with two subordinate subjects, such as: “he/I/you had him(n) placed by someone(*bi₂*)”, with the focus on the infix */n/*, being the subordinate subject suffering the action, and */ni/ < /bi₂/* referring to the subordinate agent. According to this interpretation the subordinate intransitive subject (*b, n*) and the subordinate agent (*bi₂, ni*) belong to different slots and can occur together. At the same time, this confirms that there are two homophonous (or homographic) morphemes */bi₂/*, a conjugation prefix and a pronomial prefix. Incidentally, this kind of homophony has been considered, but rejected, by Attinger (1993: 272-273)^[21].

This insert of OBG VI shows that we will have to offer differential interpretations of three Sumerian forms corresponding to Akkadian *iškun*: §44: *mu-un-gar*, §36: *i₃-gar*, §37: *bi₂-in-gar*, and of four forms corresponding to *ušaškin*: §45: *mu-ni-in-gar*, **i₃-bi₂-in-gar*, §38: *bi₂-ib₂-gar*, §39: *mi-ni-in-gar*. They must express nuances of meaning not available in Akkadian, such as “he had it placed (by someone)” against “he had someone place it”, with the focus on different participants. Without a sentence context such nuances are difficult to figure out. Correspondingly, my above translations are tentative.

The prefix */bi₂/* is rare. In OBG VI, apart from an isolated present tense form (VI§83: *bi₂-ib₂-gar-^rre¹* = *^ru₂-ša-aš¹-ka-an* = “he(e) causes it(b) being placed”, and its parallel X 69: *^rbi₂¹-ib₂-^rgub-be₂¹* = *^ruš¹-za-a-a²* = “he makes it stand”), it occurs only in the above insert, but there are several occurrences in other paradigms with different verbal bases. Here is a listing of all preterite tense forms:

VI§37	<i>bi₂-in-gar</i>	<i>iš-ku-un</i>	he(n) placed it(ø)
VI§38	<i>bi₂-ib₂-gar</i>	<i>u₂(!)-ša-aš-ki-in</i>	he(ø) had it(b) placed
X 27	<i>bi₂-in-gub</i>	<i>uš-zi-iz¹⁴</i>	he put it up, or: he stood
X 28	<i>bi₂-ib₂-gub</i>	<i>uš-zi-iz</i>	he made it stand
VIII§32	<i>bi₂-in-^rgu₇¹</i>	<i>^ri¹-ku-ul</i>	he ate
VIII§28	<i>^rbi₂-ib₂-gu₇¹</i>	<i>[u₂-ša-ki-il]</i>	he fed (he made someone eat)
VIII§18	<i>kas₄ bi₂-in-^rdu₁₁¹</i>	<i>il-sum₂</i>	he ran
IX§27	<i>sa₂ bi₂-i[n-d]u₁₁</i>	<i>^rik-šu¹-ud</i>	he reached
IX§28	<i>sa₂ b[i₂-ib₂-du₁₁]</i>	<i>[u₂-ša-ak]-š¹i-id(!)</i>	he(ø) made someone reached

Note in particular the last three instances, which are imbedded in a grid, and where, exactly as in OBG VI, the prefix */bi₂/* is used instead of */i₃/*, see Section 10.1.

¹⁴ Scribal error for *iz-zi-iz*, cf. VI§37.

9.4.3 OBGT VI: N-stems.

The regular non-indicative part of OBGT VI does not contain separative constructions (i.e. with the Sumerian /ba/ prefix or Akkadian t-stems). But there are inserts (omitted in OBGT X) playing with variations of such constructions. Curiously, the basic underlying theme (gar-ba-ab = *šitkan* = “put it(b) away(ba)!”, ga-ba-ab-gar = *luštakan* = “let me put it away!”) is absent.

The first insert uses Akkadian N-stems, indicating passive constructions.

VI§22	gar-ba	<i>na-aš-ki-in</i>	hide!	Ni	N		
	ga-ba-gar	(<i>lunnaškin</i>)	let me hide!	Ni	N		
	ḥa-ba-gar	(<i>linnaškin</i>)	let him hide!	Ni	N		
VI§23	gar-ba-na-ab	<i>na-aš-ki-in-šum</i>	have it(b) hidden for him!	Ni	N		3D
	ga-ba-na-gar	(<i>lunnaškinšum</i>)	let me hide for him!	Ni	N		3D
	ḥa-ba-na-gar	(<i>linnaškinšum</i>)	let him hide for him!	Ni	N		3D
VI§24	gar- ^r am ₃ -ma	<i>na-aš-ki-nam</i>	hide here!	Ni	N	V	
	[ga-a]m ₃ -ma-gar	(<i>lunnaškinam</i>)	let me hide here!	Ni	N	V	
	[ḥe ₂ -e]m-ma-gar	(<i>linnaškinam</i>)	let him hide here!	Ni	N	V	
VI§25	gar-am ₃ -ma-še-[eb ₂]	<i>na-aš-ki-na-aš-šu[m]</i>	have it(b) hidden here toward him!	Ni	N	V	3D
	ga-am ₃ -ma-še-eb ₂ -gar	(<i>lunnaškinaššum</i>)	let me have it(b) hidden here toward him!	Ni	N	V	3D
	ḥe ₂ -em-ma-še-eb ₂ -gar	(<i>linnaškinaššum</i>)	let him have it(b) hidden here toward him!	Ni	N	V	3D
VI§26	gar-am ₃ -ma-še	<i>na-aš-ki-na-aš-šu</i>	hide here toward him!	Ni	N	V	3A
	ga-am ₃ -ma-še-gar	(<i>lunnaškinaššum</i>)	let me hide here toward him!	Ni	N	V	3A
	ḥe ₂ -em-ma-še-gar	(<i>linnaškinaššum</i>)	let him hide here toward him!	Ni	N	V	3A

The Sumerian side uses throughout the morpheme /ba/. Together with the passive indicated by the Akkadian N-stem, this suggests a translation “have (it) put away”. The lack of the Sumerian impersonal direct object /b/ in several paragraphs may suggest intransitive constructions, for example in VI§22: “put away (yourself)!”, that is “hide (yourself)!”. Since the English verb “to hide” also has the same dual transitive/intransitive uses, I have chosen it for my tentative English translations.

The Sumerian parts of VI§25 and VI§26 contain causative and non-causative intransitive constructions, compare the analogous VIII§9 and VIII§7 in Section 7.2. The b in VI§25 denotes the intransitive subordinate subject, suffering the action. In both paragraphs the Sumerian terminative case then should have been mirrored by the Akkadian dative pronoun *-šum*; the *-šu* in §26 thus appears to be an error. Apart from that error, the Akkadian of the two paragraphs is identical; they may serve to illustrate that Akkadian, in distinction to Sumerian, has difficulties discriminating between causative and non-causative passives.

9.4.4 OBGT VI: curious -ta- forms.

Another insert with separative constructions (there is no parallel passage in OBGT X) contains curious -ta- forms:

VI§27	gar-ba-ta	<i>ši-^rit¹-[k]a-an</i>	put away!	Ni	Gt		
	ga-ba-ta-ga[r]	(<i>luštakan</i>)	let me put away!	Ni	Gt		
	ḥa-ba-ta-gar ¹	(<i>lištakan</i>)	let him put away!	Ni	Gt		
VI§28	gar- ^r ba-na ¹ -ta	<i>ši-it-ka-[aš-š]um</i>	put away for him(na)!	Ni	Gt		3D
	ga-ba-na-ta-gar	(<i>luštakaššum</i>)	let me put away for him!	Ni	Gt		3D
	ḥa-ba-na-ta-gar	(<i>lištakaššum</i>)	let him put away for him!	Ni	Gt		3D

These are the only non-indicative paragraphs of OBGT VI with Akkadian t-stems. The t-stems imply an “away from” interpretation, which is confirmed by the Sumerian directional prefix /ba/. On the Sumerian side, /ta/ is delicate to explain on the basis of the paradigms. On the basis of its position it appears to be an oblique case morpheme. If so, VI§28 is the unique paragraph with two indirect objects; note the order -na-ta, with the personal /na/ first and an indefinite/impersonal /ta/ second: “place (it) for him(na) away from them(ta)!”. Even in the absence of an explicit Sumerian personal

pronoun referring to an indirect object, the absence of an Akkadian pronoun in VI§27 implies impersonal reference. According to Thomsen (1984: 230)^[21] /ta/ is an ablative-instrumental prefix with inanimate reference (the reference /b/ would have been elided or suppressed in our case). Rather unexpectedly, in all six forms the Sumerian direct object marker /b/ is absent, so perhaps they should be interpreted intransitively: “place (yourself)”?

Initially, I had wondered whether all six occurrences of TA in these two paragraphs might be scribal errors for the somewhat similar sign AB, which would give perfectly acceptable Sumerian counterparts to the Akkadian verbal forms. This hypothetical error is made unlikely by the form sa₂ ʾdu₁₁ ʾga-ab-ta = *ki-iš-ša-ad* = “reach away” occurring in IX§11, where TA cannot possibly be a mere scribal error for AB, but where the expected /ba/ is absent (on the basis of the Akkadian and the other two Sumerian lines one would expect sa₂ du₁₁-ga-ba-ab). It would seem that in this line the Akkadian separative is encoded in the Sumerian /ta/, rather than in the ordinarily used /ba/. The Akkadian forms of VI§27-28 are exactly parallel to those of IX§11 and IX§13, and there all Sumerian forms, apart from the first line of IX§11, have the expected writing -ba-ab- and -ba-na-ab- with AB:

IX§11	sa ₂ ʾdu ₁₁ ʾga-ab-ta	<i>ki-iš-ša-ad(!)</i>	reach away!	Ni	Gt		
	ʾsa ₂ ʾga-ba-ab-du ₁₁	(<i>luktašad</i>)	let me reach away!	Ni	Gt		
	sa ₂ ʾba-ba-ab-du ₁₁	(<i>liktašad</i>)	let him reach away!	Ni	Gt		
IX§13	[sa ₂ du ₁₁ -g]a-ba-na-ʾab ¹	<i>ki-iš-ša-ʾaz-zum¹</i>	reach away for him!	Ni	Gt		3D
	[sa ₂ ga-ba-n]a-ab-du ₁₁	(<i>luktašazzum</i>)	let me reach away for him!	Ni	Gt		3D
	[sa ₂ ʾba-ba-n]a-ab-du ₁₁	(<i>liktašazzum</i>)	let him reach away for him!	Ni	Gt		3D

The first line of IX§11 is remarkable because, in distinction to the first line of VI§13 and to lines two and three of both paragraphs, it lacks the /b/ referring to the direct object (sa₂). It is even more remarkable that the Akkadian uses the separative Gt-stem, while the Sumerian lacks the expected corresponding separative prefix /ba/. It seems as if the direction of reaching exceptionally is encoded in the indirect object /b/-/ta/. This suggests a literal translation “reach away from them”. By the way, the first line of IX§11 offers the only instance of an explicit impersonal indirect object /b/ contained in these paradigms.

9.4.5 OBGT VI: Nt-stems.

Two inserts with exceptional Akkadian Nt-stems apparently serve to illustrate agent-less passives that did not fit into the Akkadian straitjacket of the grid. As Black (1991: 28-29)^[3] pointed out, the rarest theme in the paradigms is the Nt. These inserts (OBGT VI§56-57, §64-65), with non-ventive and ventive forms respectively, are appended to the regular non-ventive and ventive t-stem groups (VI§50-55 and VI§58-63). Parallel paragraphs in OBGT X are absent.

VI§56	ba-gar	<i>ʾit-ta¹-aš-ka-[an]</i>	he/it was put away	Pt	Nt		
	ʾba-gar ¹ -re-en	<i>ʾat-ta¹-aš-ka-[an]</i>	I was put away	Pt	Nt		
	ʾba ¹ -gar-re-en	<i>ʾta¹-at-ta-aš-[ka-an]</i>	you were put away	Pt	Nt		
VI§57	ba-na-gar	<i>ʾit¹-ta-aš-ka-an-ʾšum¹</i>	he/it was put away for him	Pt	Nt		3D
	ʾba-na-gar ¹ -re-en	(<i>attaškanšum</i>)	I was put away for him	Pt	Nt		3D
	ʾba-na-gar-re ¹ -en	(<i>tattaškanšum</i>)	you were put away for him	Pt	Nt		3D
VI§64	im-ma-ʾan ¹ -gar ¹⁵	<i>ʾit-ta¹-aš-ka-nam</i>	he/it was put away here	Pt	Nt	V	
	im-ma-ʾgar-re ¹ -en	(<i>attaškanam</i>)	I was put away here	Pt	Nt	V	
	ʾim-ma ¹ -gar-re(!)-en	(<i>tattaškanam</i>)	you were put away here	Pt	Nt	V	
VI§65	i[m-m]a-ʾna ¹ -gar	<i>ʾit-ta¹-aš-ka-na-aš-šum</i>	he/it was put away here for him(na)	Pt	Nt	V	3D
	[im-ma]-ʾna-gar ¹ -re-en	(<i>attaškanaššum</i>)	I was put away here for him(na)	Pt	Nt	V	3D
	i[m-m]a-ʾna-gar-re-en ¹	(<i>tattaškanaššum</i>)	you were put away here for him(na)	Pt	Nt	V	3D

¹⁵ Black p. 29: the infixed -n- must be in error.

Note that VI§56 exceptionally has Akkadian translations for all three lines.

In addition, also the irregular paragraph VI§76 must be mentioned, since it juxtaposes three t-stems, including an Nt:

VI§76	ṛim-ma-ra-an-gar ¹⁶	ṛiṣ-ta ¹ -ak-na-[ak-k]um	he(n) put (it) away here for you(ra)	Pt	Gt	V	2D
	im-ṛma-ra-ni-in-gar ¹	ṛuṣ-ta-aṣ-ki-na-ak-kum ¹	he(n) made him(ni) put (it) away here for you(ra)	Pt	Št	V	2D
	ṛim-ma-ra-gar ¹	ṛit-ta-aṣ-ka-na-ak-kum ¹	he/it was put away here for you(ra)	Pt	Nt	V	2D

The first two lines are parallel to the two line paragraphs VI§74 and VI§75 (see Section 9.1 and Appendix A), while the third line is a 2nd person parallel to the 3rd person of the first line of VI§65.

These paragraphs deserve a detailed discussion. In the regular grid of OBGT VI the prefix /ba/ occurs in two seemingly very different, disjoint uses: one is classified by its inclusion in the stative group (§29-34) as a stative prefix with stative/passive meaning, mirrored by Akkadian passive Š-stem statives, and the other in the t-stem groups (§50-55 and §58-63) as a directional prefix with separative meaning. The inserted paragraphs are appended to the latter groups, but have suffix instead of infix conjugation. With Black I interpret the curious Akkadian forms as preterites of the Nt. In view of the suffix conjugation the Sumerian forms are meant to be intransitive. Hence, for all practical purposes the forms amount to stative/passives. In addition, a slightly different third use of /ba/, already discussed above in Section 9.4.3, occurs in the insert VI§22-26, where it is mirrored by straight passive N-stems.

Note the subtle differences between the transitive entry VI§50: ba-an-gar = *iṣṭakan* = “he(n) put it(ø) away”, and the intransitive entries VI§30: ba-ab-gar = *šuṣkun* = “he(ø) was put by someone(b)” in the stative group of the regular grid and VI§56: ba-gar = *ittaṣkan* = “he(ø) was put away” in the insert.

What was the reason for including such inserts? I can only speculate. First, I note that the grid of OBGT VI appears to be based on Akkadian. It alternates regularly between G-stems and Š-stems (see Section 9.1), but in the stative group the causative Š-stems play an awkward role. There, the Akkadian *šuṣkun* presumably means the result of the verbal action: “he/it was put *by someone*”. In the paradigm this is mirrored by the Sumerian ba-ab-gar, with /b/ referencing “someone”. While this corresponds exactly to the Akkadian, it does not render a straight agent-less passive. I presume that this was the reason for resorting to the unusual Nt-stem inserts — namely to concoct an Akkadian equivalent to the Sumerian agent-less stative/passive ba-gar.

Second, the question is whether the OB grammarians interpreted /ba/ as two separate, homophonous morphemes, one with separative and the other with passive function, or as a single morpheme with two disjoint scopes. Conceivably, the Nt-inserts might be used as an argument in favor of the second interpretation: by combining the passive function of the N-stem with the separative function of the t-stems these inserts would bridge the gap between seemingly disjoint scopes. Note that the two uses of /ba/ have in common that both indicate a move out of the area of immediate control, either spatial or conceptual, roughly comparable to the English “off”.

9.4.6 OBGT VI + X: present tense forms.

The sections with present tense forms appear to have been appended to the paradigms OBGT VI and X as afterthoughts. There is only partial overlap between OBGT VI and X. Curiously, the verb gub “to stand”, like gar “to put”, appears to be construed transitively, compare the remarks made near the

¹⁶ Irregular paragraph structure. With Black p. 29 I have interchanged the first and third Sumerian lines. The parallel paragraphs make it clear that an infixed /n/ belongs into the first, but not into the third line.

beginning of Section 9. Exceptionally, all paragraphs comprise only a single line, and I am therefore quoting them both by line and by paragraph numbers. My grammatical interpretations and translations are tentative. They are hampered by the lack of a structured grid and by the absence of complete paragraphs.

06N221	VI§77	ab-gar-re	^r <i>iš-ša-ak-ka-an</i> ¹	it is being put	Ps	N		
06N222	VI§78	an-gar-re	<i>iš-ša-ak-ka-an</i>	he is being put	Ps	N		
06N223	VI§79	an-na-gar-re	<i>iš-ša-ak-ka-an-šum</i>	he is being put for him(na)	Ps	N		3D
06N224	VI§80	an-na-ab-gar-re	<i>i-ša-ak-ka-an-šum</i> ¹⁷	someone puts it(b) for him(na), or: it(b) is being put for him(na)	Ps	G		3D

10N074		^r ma ¹ -ni-ib ₂ -gub-be ₂	<i>uš-za-az-za-am</i>	he makes it stand here	Ps	Š	V	

Note that VI§77 has an Akkadian N-stem, while the seemingly parallel X 66 appears to have a G-stem (possibly an error). The Akkadian forms are present tense, and therefore it is curious that the text seems to use *hamtu*-bases. In the Sumerian forms the final -e must mark a 3rd person subject, either transitive with an infixed direct object, or intransitive with an infixed subordinate subject. The latter situation applies in particular to the causative VI§83, compare the comments made near the end of Sections 6.1 and 7.2. But I believe that it also holds for the stative forms of VI§77-80 (prefix /ā/), where the Sumerian is mirrored by an Akkadian present tense passive N-stem. My translations above render the Akkadian, literal translations of my tentative understanding of the Sumerian forms sound unpleasantly stilted (VI§78: “someone has him being put”, etc., where the primary subject /e/ “someone” is suffixed, and the subordinate subject /n/ “he”, which suffers the action, is infixed; this /n/ is spelled out in VI§78, but elided in VI§79).

The Sumerian and Akkadian constructions of X 73 are curious and puzzling. They have been termed “completely mystifying” by Black (1991: 30)^[31]. The Akkadian N-stem would seem to imply a present tense passive interpretation, such as: “he/it is being stood up”. But note that CAD^[41] (*uzuzzu*, p. 392) knows only a non-passive, ingressive interpretation of this N-stem: “to step up”, “to take a stand”.

Unfortunately, the Sumerian form seems to disagree with the Akkadian. Elsewhere in our paradigms /ra/ is exclusively used for the 2nd person dative object, and one therefore would translate the Sumerian as “he stands away for you”. But on the Akkadian side there is no place for a 2nd person dative object. Perhaps the text here conflates two entries?

However, modern grammars suggest a better solution. They indicate that /ra/ also is an alternate of /ta/, with the meaning “away from”, see Thomsen (1984: 232)^[21] and Jagersma (2010: Section 19.3, p. 454)^[15]. Thus, we can translate the Sumerian as “he/it stands away (from it)”. Taking also the Akkadian into account, we find that an ingressive translation “he steps aside” or “he steps off” is compatible with both languages.

¹⁷ The single š may be an error; this paragraph probably continues the N-stem passives of §77-79.

10 OBGT VIII and IX: two-part verbs.

The paradigms OBGT VIII and IX are the shortest, most loosely structured, least complete and least disciplined among our five paradigms. They illustrate three topics: (i) two-part verbs, (ii) transitive and intransitive constructions of the same verb, and (iii) intransitive causatives. Some clearly identifiable examples of these features have already been discussed in Section [7.2](#).

The OB grammarians here do not favor us with strictly organized paradigmatic grids supplemented by inserts, as in OBGT VII and VI+X, that would highlight their structural understanding of Sumerian grammar. The lack of discipline shows up by the fact that grammatical constructions sometimes fluctuate inside paragraphs: there are changes between cases, between transitive and intransitive, or between *hamtu* and *marû*. Occasionally, they choose alternative Sumerian renderings of analogous Akkadian structures, as for example the paragraphs VIII§7 and VIII§9 pointed out in Section [10.1](#). In order to see whether the grammatical features described in the preceding sections apply and whether there are additional new features, we are forced to discuss large parts of the texts paragraph by paragraph, and sometimes line by line, in Sections [10.4](#) and [10.5](#).

The first 23 paragraphs of OBGT VIII cover the two-part verb *kas*₄ ... *du*₁₁ = *lasāmum* = to run. In Sumerian ordinarily it is constructed transitively as “running – I do it”, with the impersonal pronoun /b/ referring to the direct object *kas*₄. With 23 paragraphs, this is the shortest paradigm. After them the text offers 15 more paragraphs with unrelated forms of *gu*₇ = *akālum* = to eat, often irregular and abbreviated (see Section [12.2](#) for them).

The first 49 paragraphs of OBGT IX cover the two-part verb *sa*₂ ... *du*₁₁ = *kašādum* = to reach. In Sumerian ordinarily it is constructed transitively as “reaching – I do it”, with the impersonal pronoun /b/ referring to the direct object *sa*₂. In Sumerian the person or thing being reached is treated as an indirect object in the dative or locative, not as the direct object, as one might expect from our understanding of the verb’s meaning, while in Akkadian the accusative or dative is used, see Section [10.6](#). The final 9 paragraphs of OBGT IX are unrelated and cover non-indicative forms of 9 different verbs.

VIII has 12 non-indicative and 11 indicative paragraphs, IX has 22 non-indicative and 27 indicative paragraphs. Only the initial parts exhibit recognizable grid structures (with a few gaps), see Section [10.1](#). The two paradigms order the paragraphs differently, but the 12 non-indicative paragraphs of VIII can be put into onto-to-one correspondence with 12 of the 22 non-indicative paragraphs of IX (IX adds a number of t-stem forms).

Transitive constructions. A majority of the 23+49=72 paragraphs use transitive constructions. Clearly recognizable as transitive are preterite tense constructions with infix conjugation, and non-indicative non-causative forms with an explicit direct object /b/. Of special interest are five present tense paragraphs (VIII§13-17) with suffix conjugation and infixed direct objects /b/. There are a few instances where the construction looks intransitive, but where the direct object /b/ appears to have been hidden by assimilation to an adjacent ventive-m (VIII§2, VIII§15, IX§6).

Intransitive non-causative constructions. There are three non-indicative occurrences (VIII§7, VIII§11, IX§21; in the last two the construction inexplicably is switched to transitive inside the paragraph) and four present tense occurrences (IX§33-36).

Intransitive causative constructions. There are three non-indicative (VIII§9, VIII§12, IX§22) and four preterite tense constructions (VIII§22, VIII§23, IX§28, IX§43).

In the following subsections the parts thought to be intransitive are highlighted.

10.1 OBT VIII + IX: systematic treatment of 3rd person forms.

OBT VIII and IX mess up the paragraphs with 1st and 2nd person pronouns and with present tense forms. However, they provide a reasonably systematic coverage of non-indicative and preterite tense forms without and with 3rd person objects, covering roughly three fifths of the available material. Here are tabular outlines; I include them because they had assisted with the identification of exceptional forms and inserts. OBT VIII arranges the non-indicative forms in a systematic grid, alternating between non-ventive and ventive forms, whose structure I have adopted somewhat arbitrarily also for OBT IX, which alternates between non-causative and causative, and also for the preterite tense forms.

Non-indicative forms, either no object or 3rd person object.

From texts:	VIII kas ₄	IX sa ₂	Sumerian morphology	Akkadian morphology			
du ₁₁ -ga-ab	§1	§1	dug ₄ b	Ni	G		
*du ₁₁ -ga-ba-ab ¹⁸		§11	dug ₄ ba b	Ni	Gt		
du ₁₁ -ga-am ₃	§2	§6	dug ₄ m b	Ni	G	V	
du ₁₁ -ga-am ₃ -ma-ab		§15	dug ₄ m ba b	Ni	Gt	V	
du ₁₁ -ga-bi ₂ -ib ₂	§3	§3	dug ₄ bi ₂ b	Ni	Š		
du ₁₁ -ga-ba-ni-ib ₂		§12	dug ₄ ba bi ₂ b	Ni	Št		
du ₁₁ -ga-am ₃ -mi-ib ₂	(§3a) ¹⁹	§7	dug ₄ m bi ₂ b	Ni	Š	V	
du ₁₁ -ga-am ₃ -ma-ni-ib ₂		§16	dug ₄ m ba bi ₂ b	Ni	Št	V	
du ₁₁ -ga-ni-ib ₂	§4	§2	dug ₄ ni b	Ni	Š		3A
(du ₁₁ -ga-ba-ni-ib ₂)		≈§12 ²⁰	dug ₄ ba ni b	Ni	Št		3A
du ₁₁ -ga-ma-ni-ib ₂	§5	§8	dug ₄ m ni b	Ni	Š	V	3A
(du ₁₁ -ga-am ₃ -ma-ni-ib ₂)		≈§16 ²¹	dug ₄ m ba ni b	Ni	Št	V	3A
du ₁₁ -ga-na-ab	§6	§4	dug ₄ na b	Ni	G		3D
du ₁₁ -ga-ba-na-ab		§13	dug ₄ ba na b	Ni	Gt		3D
du ₁₁ -ga-mu-na-ab	(§7)	§9	dug ₄ m na b	Ni	G	V	3D
du ₁₁ -ga-am ₃ -ma-na-ab		§17	dug ₄ m ba na b	Ni	Gt	V	3D
du ₁₁ -ga-na-ni-ib ₂	§8	§5	dug ₄ na ni b	Ni	Š		3D
du ₁₁ -ga-ba-na-ni-ib ₂		§14	dug ₄ ba na ni b	Ni	Št		3D
du ₁₁ -ga-mu-na-ni-ib ₂	(§9)	§10	dug ₄ m na ni b	Ni	Š	V	3D
du ₁₁ -ga-am ₃ -mu-na-ni-ib ₂		§18	dug ₄ m ba na ni b	Ni	Št	V	3D

The 3A-forms render the Akkadian accusative by the Sumerian subordinative. VIII§7 and VIII§9 are put in parentheses; they provide interesting alternative forms, namely the intransitive constructions du₁₁-ga-am₃-še and du₁₁-ga-am₃-ma-ši-ib₂, respectively, discussed in Section 7.2.

¹⁸ The text here offers the irregular form du₁₁-ga-ab-ta, but the volitive ga-ba-ab-du₁₁ and the precativative ha-ba-ab-du₁₁ have the expected regular forms with -ba-ab.

¹⁹ Accidentally omitted in the text.

²⁰ Because of dissimilation bi₂ > ni the omitted Sumerian form is identical to that of IX§12.

²¹ Because of dissimilation bi₂ > ni the omitted Sumerian form is identical to that of IX§16.

Preterite tense forms, either no object or 3rd person object.

im-ma-na-ni-ib ₂ -du ₁₁		§41	m ba na ni b dug ₄	Pt	Št	V	3D

The Akkadian grid is copied over from the table with the non-indicative forms. Highlighted is an exceptional intransitive construction. The four 3A-forms (with subordinative personal pronouns) are absent; their Sumerian versions would be homographic to the four preceding forms (with subordinative impersonal pronouns), apart from the first, where IX§28 offers an exceptional intransitive construction,. For two paragraphs (IX§48 and IX§49) the Sumerian ventive forms for all practical purposes coincide with the non-ventive ones (note that OBGT IX interchangeably uses both ma- and mu- for the ventive).

It is remarkable that the /i₃/-prefix does not occur in the above list. In its place we find the /bi₂/-prefix. Note that in OBGT VI the /bi₂/-prefix occurs as an insert inside the /i₃/-prefix group, and that OBGT VI includes VI§36: i₃-gar and VI§37: bi₂-in-gar, both *iškun*, as alternatives, see Section 9.4.2. This suggests that /bi₂/ and /i₃/ may be interchangeable.

²² Either metathesis ba-na-an-du₁₁ > ba-an-na-du₁₁, or elision of the infix n.

10.2 OBT VIII: the structure of §1-23.

The following is a streamlined layout of the first 23 paragraphs of OBT VIII, with tentative completions in parentheses. In this layout, ordinarily only the first line of each paragraph is quoted, apart from the non-indicative paragraphs §10-12, where both the imperative and the volitive forms are quoted. Constructions that I consider to be intransitive are highlighted. The last three columns indicate the inferred grid by giving the grammatical structure of the Akkadian entries.

§11:	ṛkas ₄ du ₁₁ -ga ¹ -[mu]-še ṛkas ₄ ga-mu-e-ši-ib ₂ -be ₂ ¹	§17:	kas ₄ am ₃ -mu-e-ši-ib ₂ -be ₂	§20:	kas ₄ mu-ri-in-du ₁₁	G G	V V	1D 2D
				§21:	ṛkas ₄ im ¹ -ma-ri-i[n-d]u ₁₁	Gt	V	2D
§12:	ṛkas ₄ du ₁₁ -ga-am ₃ -mu-še-eb ₂ ¹ ṛkas ₄ ga-am ₃ -ma-r[i-ib ₂]-du ₁₁			§22:	ṛkas ₄ ¹ mu-ri-ib ₂ -[du ₁₁]	Š Š	V V	1D 2D
				§23:	kas ₄ im-ma-r[i-ib ₂ -du ₁₁]	Št	V	2D

The beginning Ni-paragraphs (§1-12) regularly alternate between non-ventive and ventive ones, with the exception of §11-12, where the motion toward a 1st or 2nd person requires the ventive.

There are two serious irregularities: First, the ventive counterpart of §3 is missing, probably a scribal oversight; in the above list it has been restored as §3a. Second, the first line of §10 is non-ventive, while the second and third lines are ventive constructions, so it looks as if a non-ventive paragraph (§10a) and a ventive paragraph (§10b) had been telescoped into one. Note that OBT IX provides a non-ventive parallel IX§20 to §10a, but omits a ventive version. Note the switch between *hamtu* and *marû* inside of §11 that does not occur in the causative counterpart §12.

The indicative constructions are covered only spottily, without a clear grid structure. 1st person objects occur only with Ni-constructions. The Sumerian oblique cases seem to vary somewhat haphazardly between dative, terminative, locative and locative-2. Note that the preterite tense analogues of §14 and §16 are missing. Note also that VIII §13-17 have Akkadian present tense, Sumerian *marû* base and use suffix conjugation, while §18-23 have Akkadian preterite tense, Sumerian *hamtu* base, but curiously, §18-21 use infix, while §22-23 seem to use suffix conjugation (see the full listing of these paragraphs in Appendix A).

10.3 OBT IX: the structure of §1-49.

The paragraphs of OBT IX are in a somewhat careless order, and there are errors and gaps. In distinction to OBT VIII, which favored an alternation between non-ventive and ventive forms, OBT IX favors an alternation between G and Š. The following table tries to bring the paragraphs into a more systematic arrangement. Some of the gaps (to be discussed below) are indicated in parentheses. Constructions that I consider to be intransitive are highlighted.

Structure of the paradigm (with omissions indicated in parentheses, see below).

			no indirect object		accusative pronoun		dative pronoun	
Obj			G	Š	G	Š	G	Š
Ni		3	§1	§3		§2	§4	§5
Ni	V	3	§6	§7		§8	§9	§10
Ni	t	3	§11	§12		(§12*)	§13	§14
Ni	V t	3	§15	§16		(§16*)	§17	§18
Ni		1/2			§19	§20		
Ni	V	1/2					§21	§22
Pt		3	§27	§28			§48	§49
Pt	V	3	§29	§30			(§48*)	(§49*)
Pt	t	3	§23	§24			§25	§26
Pt	V t	3	§38	§39			§40	§41
Pt	V t	2					§42	§43
Pt		2			§44	§45		
Pt	V	2			§31, §46	§32, §47		
Ps			§33					
Ps	V		§34					
Ps	V	2			§35			
Ps	V t	2			§36			
St			§37					

Non-indicative section (§1-22). This is in fairly good order. There is a mix-up between §2 and §3. If we judge on the basis of the Sumerian forms, then the simplest explanation is that these two paragraphs erroneously had been interchanged. The confusion is not lessened by the fact that the Akkadian of §2 is not a translation of the causative Sumerian form, but is a unique (and therefore probably erroneous) G-form with accusative pronoun.

In §19, the Akkadian 1st person seems to be an accusative (and so may be the Sumerian), but the second and third lines clearly have Sumerian datives (there is no Akkadian version there). So §19 may properly belong into the empty cell with G and the dative pronoun (with an ethical dative, not requiring the ventive). But then it should not precede §20.

There are several gaps. My tentative explanations are as follows.

(i) The counterparts §12* and §16* of §12 and §16 with accusative pronouns are absent. But if we add accusative personal pronouns to §12 and §16, we obtain identical Sumerian forms (because of dissimilation $b_2 > ni$ after labial + vowel), the differences are only in the Akkadian. Maybe these paragraphs were omitted because of this.

(ii) Of the two empty non-ventive cells with dative pronouns, the first is at least partially filled by §19 (where the second and third lines have dative pronouns, see above), and with the second, there may be semantic problems.

Indicative section (§23-49). The ordering of the paragraphs is rather curious, with the t-stems first. It seems that the compiler after §30 initially had switched to 1st and 2nd person (§31, §32), and then to a spotty coverage of present tense (§33-36) and a unique stative form (§37). Then he added the forgotten t-stem ventive forms (§38-43) and some more 2nd person forms (§44-47). Finally, he added §48 and §49 as afterthoughts. The ventive analogues of these two paragraphs are absent, perhaps because the Sumerian of §48 and §49 uses the ambiguous mu-prefix; note that §29-§32 use ma- for the ventive, but the immediately preceding §46-§47 use mu-. The tablet ends with unrelated paragraphs (§50-58) covering Ni-forms of nine different verbs.

With the exception of §32 (where it refers to an indirect object), Akkadian accusatives in causative constructions all seem to refer to the subordinate subject. Note that in §21 the Sumerian case prefix is changed inside the paragraph from -mu-še- (“toward me”) to -mu-ra- (“for you”). Also here, 1st and 2nd person dative objects use the ventive.

This paradigm seems to suggest that with the verb *kašādum* the Akkadian accusative and dative are used ambiguously and interchangeably. With non-causative constructions, for 3rd person objects this text always uses the Akkadian dative, but for 1st and 2nd person objects, it uses either dative or accusative (see Section [10.6](#)). I have not been able to discern a rule governing the choice of Akkadian case; semantic differences between the use of *kašādum* with accusative and dative cannot show up in the paradigm. The Sumerian case is mostly dative, occasionally terminative. In a few other cases it is locative /a/ or locative-2 /ri/. The locative concerns IX§35-36 (Akk. accusative), the locative-2 concerns IX§46 (Akk. accusative) and IX§42, with the parallels VIII§20 and §21 (the last three Akk. dative).

10.4 OBGT VIII + IX: comparative discussion of the Ni-forms.

The non-indicative constructions are ordered systematically, and all 12 Ni-paragraphs of OBGT VIII have close counterparts in OBGT IX. The Ni-paragraphs of OBGT VIII do not have Akkadian t-stems, while most of the additional paragraphs of IX offer t-stems. I follow the order of OBGT VIII and group parallel constructions together.

10.4.1 No object or 3rd person objects.

The morphological interpretation of most paragraphs is straightforward, see Section [10.1](#).

VIII§1	^r kas ₄ du ₁₁ -ga-ab kas ₄ g[a-a]b-du ₁₁ ^r kas ₄ ^h [e ₂ -ib ₂ - ^r du ₁₁]	<i>lu-sum₂</i> (<i>lulsum</i>) (<i>lilsum</i>)	run! let me run! let him run!	Ni	G		
				Ni	G		
				Ni	G		
IX§1	^r sa ₂ du ₁₁ -ga-[ab] ^r sa ₂ ga-ab-[du ₁₁] sa ₂ ^h e ₂ -eb ₂ -du ₁₁	[<i>ku-š</i>]u-ud (<i>lukšud</i>) (<i>likšud</i>)	reach! let me reach! let him reach!	Ni	G		
				Ni	G		
				Ni	G		
IX§11	sa ₂ ^r du ₁₁ -ga-ab-ta ^r sa ₂ ga-ba-ab-du ₁₁ sa ₂ ^h a-ba-ab-du ₁₁	<i>ki-iš-ša-ad(!)</i> (<i>luktašad</i>) (<i>liktašad</i>)	reach away! let me reach away! let him reach away!	Ni	Gt		
				Ni	Gt		
				Ni	Gt		

Note the curious -ta in IX§11. Expected is du₁₁-ga-ba-ab, in analogy to the volitive and precative forms. See also the curious -ta- forms in OBGT VI, discussed in Section [9.4.4](#). In distinction to VI§27-28, -ta here cannot be a scribal error for -ab.

The corresponding ventive entries are:

VIII§2	[kas ₄ d]u ₁₁ - ^r ga ¹ -am ₃ [kas ₄ ga]-am ₃ -du ₁₁ ^r kas ₄ ^h e ₂ -em- ^r du ₁₁]	<i>lu-us-ma-am</i> (<i>lulsumam</i>) (<i>lilsumam</i>)	run here! let me run here! let him run here!	Ni	G	V	
				Ni	G	V	
				Ni	G	V	
IX§6	sa ₂ du ₁₁ -ga-am ₃ -me(?) sa ₂ ga-am ₃ -d[du ₁₁] sa ₂ ^h e ₂ -e[m]-du ₁₁	^r ku-uš-dam ¹ (<i>lukšudam</i>) (<i>likšudam</i>)	reach here! let me reach here! let him reach here!	Ni	G	V	
				Ni	G	V	
				Ni	G	V	
IX§15	[sa ₂ du ₁₁ -ga-a]m ₃ - ^r ma-ab ¹ ^r sa ₂ ga-am ₃ -ma-ab-du ₁₁ ¹ ^r sa ₂ ^h e ₂ -em-ma-ab-du ₁₁ ¹	^r ki-iš-ša-dam ¹ (<i>luktašdam</i>) (<i>liktašdam</i>)	reach away here! let me reach away here! let him reach away here!	Ni	Gt	V	
				Ni	Gt	V	
				Ni	Gt	V	

Note that in VIII§2 and IX§6 the -b- referencing the direct object kas₄ seems to be absent, suggesting intransitive constructions – unless b is hidden by assimilation to m. The fact that IX§15 has -b- suggests assimilation: in IX§15 the morphology clearly is /dug₄/-m/-ba/-b/, which makes us to expect /dug₄/-m/-b/ in VIII§2 and IX§6 (remember that DU₁₁ = DUG₄). See also the comments on VI§7 in Section [9.2.1](#).

The following five paragraphs give causative counterparts to the above six:

VIII§3	kas ₄ du ₁₁ -ga-bi ₂ -ib ₂ kas ₄ ga-bi ₂ -ib ₂ -du ₁₁ kas ₄ ^h e ₂ -bi ₂ -ib ₂ -du ₁₁	<i>š</i> u-ul-š ₂ - ^r im ¹ (<i>lušalsim</i>) (<i>lišalsim</i>)	make someone run! let me make someone run! let him make someone run!	Ni	Š		
				Ni	Š		
				Ni	Š		
IX§3	sa ₂ du ₁₁ -ga-bi ₂ - ^r ib ₂ ¹ sa ₂ ga-bi ₂ -ib ₂ -[d]u ₁₁ ^r sa ₂ ^h e ₂ -bi ₂ -ib ₂ -du ₁₁	<i>š</i> u-uk-š ₂ - ^r id ¹ (<i>lušakšid</i>) (<i>lišakšid</i>)	make someone reach! let me make someone reach! let him make someone reach!	Ni	Š		
				Ni	Š		
				Ni	Š		
IX§12	sa ₂ ^r du ₁₁ -ga-ba ¹ -ni-ib ₂ ^r sa ₂ ga-ba-ni ¹ -ib ₂ -du ₁₁ [sa ₂ ^h a-b]a- ^r ni ¹ -ib ₂ -du ₁₁	<i>š</i> u-ta-ak-š ₂ -id ¹ (<i>luštakšid</i>) (<i>lištakšid</i>)	make someone reach away! let me make someone reach away! let him make someone reach away!	Ni	Št		
				Ni	Št		
				Ni	Št		

In IX§12 we have dissimilation bi₂ > ni. The corresponding ventive entries are:

IX§7	sa ₂ du ₁₁ -ga-am ₃ - ^r mi-ib ₂ ¹ sa ₂ ga-am ₃ -mi-i[b ₂ -d]u ₁₁ sa ₂ ^h e ₂ -em-mi- ^r ib ₂ ¹ -du ₁₁	^r šu-uk-š ₂ -i-dam ¹ (<i>lušakšidam</i>) (<i>lišakšidam</i>)	make someone reach here! let me make someone reach here! let him make someone reach here!	Ni	Š	V	
				Ni	Š	V	
				Ni	Š	V	
IX§16	^r sa ₂ du ₁₁ -ga ¹ -a[m ₃ -ma]- ^r ni-ib ₂ ¹ ^r sa ₂ ga-am ₃ -ma-ni-ib ₂ -du ₁₁ ¹ ^r sa ₂ ^h e ₂ -em-ma-ni-ib ₂ -du ₁₁ ¹	^r šu-ta ¹ -ak-š ₂ [i-dam] (<i>luštakšidam</i>) (<i>lištakšidam</i>)	make someone reach away here! let me make someone reach away here! let him make someone reach away here!	Ni	Št	V	
				Ni	Št	V	
				Ni	Št	V	

Note that the morphology in IX§7 is -m/-bi₂/- > -mmi-, and in IX§16 -m/-ba/-bi₂/- > -mmi-. In OBGT VIII the ventive counterpart to VIII§3 is missing. Apart from kas₄ in place of sa₂, the Sumerian would be identical to that of IX§7 (probably a scribal oversight, see Section [10.2](#), §3a).

The next four paragraphs nicely illustrate the ventive transformation:

VIII§4	kas ₄ du ₁₁ -ga-ni-ib ₂	^r šu ¹ -ul ¹ -š ₂ ¹ -im-šu	make him run!	Ni	Š		3A
	kas ₄ ga-ni-ib ₂ -du ₁₁	(lušalsimšu)	let me make him run!	Ni	Š		3A
	kas ₄ ħe ₂ -ni-ib ₂ -du ₁₁	(lišalsimšu)	let him make him run!	Ni	Š		3A
IX§2	sa ₂ du ₁₁ -ga-ni-ib ₂	ku-šu-uz- ^r zu ²³	make him reach!	Ni	Š		3A
	^r sa ₂ ¹ ga-ni-ib ₂ -du ₁₁	(lušakšizzu)	let me make him reach!	Ni	Š		3A
	sa ₂ ħe ₂ -ni-ib ₂ -du ₁₁	(lišakšizzu)	let him make him reach!	Ni	Š		3A

VIII§5	kas ₄ du ₁₁ (!)-ga-ma-ni-ib ₂	šu-u[l]-š ₂ -ma-aš-šu	make him run here!	Ni	Š	V	3A
	kas ₄ ga-ma-ni-ib ₂ -du ₁₁	(lušalsimaššu)	let me make him run here!	Ni	Š	V	3A
	kas ₄ ħe ₂ - ^r ma-ni ¹ -ib ₂ -du ₁₁	(lišalsimaššu)	let him make him run here!	Ni	Š	V	3A
IX§8	sa ₂ du ₁₁ -ga-mu-ni-i[b ₂]	[š]u-uk-š ₂ -da-aš-šu	make him(ni) reach here!	Ni	Š	V	3A
	sa ₂ ga-mu-ni-ib ₂ -[du ₁₁]	(lušakšidaššu)	let me make him(ni) reach here!	Ni	Š	V	3A
	^r sa ₂ ¹ ħu-mu-ni-i[b ₂ -d]u ₁₁	(lišakšidaššu)	let him make him(ni) reach here!	Ni	Š	V	3A

Note the variation between -ma- and -mu- in the writing of the ventive /m/, and between ħe- and ħu-.

Here are six paragraphs with non-causative dative (or homographic locative) constructions, first three non-ventive, then three ventive paragraphs.

VIII§6	kas ₄ du ₁₁ - ^r ga ¹ -na-ab	lu-sum ₂ -šum	run for him!	Ni	G		3D
	kas ₄ ^r ga-na ¹ -ab-du ₁₁	(lulsumšum)	let me run for him!	Ni	G		3D
	kas ₄ ħ[e ₂ -n]a- ^r ab-du ₁₁ ¹	(lišsumšum)	let him run for him!	Ni	G		3D
IX§4	sa ₂ du ₁₁ -ga-na-ab	ku-šu- ^r uz-zum ¹	reach for him(na)!	Ni	G		3D
	sa ₂ ga-na-ab-du ₁₁	(lukšuzzum)	let me reach for him!	Ni	G		3D
	sa ₂ ħe ₂ -na-ab- ^r du ₁₁ ¹	(lišuzzum)	let him reach for him!	Ni	G		3D
IX§13	[sa ₂ du ₁₁ -g]a-ba-na- ^r ab ¹	ki-iš-š ₂ -a ^r az-zum ¹	reach away for him!	Ni	Gt		3D
	[sa ₂ ga-ba-n]a-ab-du ₁₁	(luktašazzum)	let me reach away for him!	Ni	Gt		3D
	[sa ₂ ħa-ba-n]a-ab-du ₁₁	(liktašazzum)	let him reach away for him!	Ni	Gt		3D

These first three paragraphs show regular transitive non-ventive dative (or locative) constructions.

The next three paragraphs add the ventive. With the verb “to run” (but not with “to reach”) they change the dative (or locative) to the terminative:

VIII§7	^r kas ₄ du ₁₁ -ga ¹ -am ₃ -še	lu-us-ma-aš-šum	run toward him(še) here(m)!	Ni	G	V	3D
	kas ₄ ga-am ₃ -š ₂ -du ₁₁	(lulsumaššum)	let me run toward him(š ₂) here(m)!	Ni	G	V	3D
	kas ₄ ħe ₂ -em-š ₂ -du ₁₁	(lišumaššum)	let him run toward him(š ₂) here(m)!	Ni	G	V	3D
IX§9	^r sa ₂ du ₁₁ -ga-mu-na ¹ -ab	[ku-u]š-da-aš-šum	reach for him(na) here!	Ni	G	V	3D
	[sa ₂ ga-mu-na-ab]-du ₁₁	(lukšudaššum)	let me reach for him(na) here!	Ni	G	V	3D
	[sa ₂ ħu-mu-na-ab-d]u ₁₁	(likšudaššum)	let him reach for him(na) here!	Ni	G	V	3D
IX§17	^r sa ₂ du ₁₁ -ga ¹ -a[m ₃ -ma-na-ab]	[k]i- ^r iš-š ₂ -da ¹ -aš-šum	reach away for him here!	Ni	Gt	V	3D
	^r sa ₂ ga-am ₃ ¹ -[ma-na-ab-d]u ₁₁	(luktašdaššum)	let me reach away for him here!	Ni	Gt	V	3D
	s[a ₂ ħe ₂ -em-ma]-na-a[b-d]u ₁₁	(liktašdaššum)	let him reach away for him here!	Ni	Gt	V	3D

In VIII§7 the -b- referencing the direct object kas₄ is absent (its place would have been at the end of the first line and just before du₁₁ in the second and third line). A comparison with IX§9 and the non-ventive forms (VIII§6, IX§4) confirms that the verb here is constructed intransitively.

²³ Error, read šukšizzu, cf. §8.

The following three paragraphs give the corresponding non-ventive causative forms, all regular transitive constructions:

VIII§8	kas ₄ du ₁₁ -ga ¹ -na-ni-ib ₂	<i>šu-ul-si₂-im-šum</i>	make him(ni) run for him!	Ni	Š		3D
	kas ₄ ga-na ¹ -ni-ib ₂ -du ₁₁	(<i>lušalsimšum</i>)	let me make him(ni) run for him!	Ni	Š		3D
	kas ₄ he ₂ -na ¹ -ni-ib ₂ -du ₁₁	(<i>lišalsimšum</i>)	let him make him(ni) run for him!	Ni	Š		3D
IX§5	sa ₂ du ₁₁ -ga-na-ni-ib ₂ ¹	<i>šu-uk-ši-iz-zum¹</i>	make him(ni) reach for him(na)!	Ni	Š		3D
	sa ₂ ga-na-ni-ib ₂ -du ₁₁	(<i>lušakšizzum</i>)	let me make him(ni) reach for him(na)!	Ni	Š		3D
	sa ₂ he ₂ -na-ni-ib ₂ -du ₁₁ ¹	(<i>lišakšizzum</i>)	let him make him(ni) reach for him(na)!	Ni	Š		3D
IX§14	[sa ₂ du ₁₁]-ga-ba-na ¹ -ni-ib ₂	<i>šu-ta-ak-ši-iz-zum¹</i>	make him(ni) reach away(ba) for him(na)!	Ni	Št		3D
	[sa ₂ ga-ba-na-ni-ib ₂ -du ₁₁] ¹	(<i>luštakšizzum</i>)	let me make him(ni) reach away(ba) for him!	Ni	Št		3D
	[sa ₂ ha-ba-na-ni-ib ₂ -du ₁₁] ¹	(<i>lištakšizzum</i>)	let him make him(ni) reach away(ba) for him!	Ni	Št		3D

The next three paragraphs give the corresponding ventive versions:

VIII§9	kas ₄ du ₁₁ -ga-am ₃ -ma-ši-ib ₂	<i>šu-ul-si₂-ma-aš-šum</i>	have someone(b) run toward him here!	Ni	Š	V	3D
	kas ₄ ga-am ₃ -ma-ši ¹ -ib ₂ -du ₁₁	(<i>lušalsimaššum</i>)	let me have someone(b) run toward him here!	Ni	Š	V	3D
	kas ₄ he ₂ -em-ma-ši-ib ₂ -du ₁₁	(<i>lišalsimaššum</i>)	let him have someone(b) run toward him here!	Ni	Š	V	3D
IX§10	[sa ₂ du ₁₁ -ga-mu-na-ni-ib ₂]	<i>šu¹-*ta-ak^{*24}-ši-da-aš-šum</i>	make him(ni) reach for him(na) here!	Ni	Š	V	3D
	[sa ₂ ga-mu-na-ni-ib ₂ -du ₁₁]	(<i>lušakšidaššum</i>)	let me make him(ni) reach for him(na) here!	Ni	Š	V	3D
	[sa ₂ hu-mu-na-ni-ib ₂ -du ₁₁]	(<i>lišakšidaššum</i>)	let him make him(ni) reach for him(na) here!	Ni	Š	V	3D
IX§18	[sa ₂ du ₁₁]-ga-am ₃ -mu- ¹ na-ni-ib ₂	<i>šu-ta-ak-ši¹-da-aš-šum</i>	make him reach away for him here!	Ni	Št	V	3D
	sa ₂ ga- ¹ am ₃ -mu-na-ni-ib ₂ -du ₁₁	(<i>luštakšidaššum</i>)	let me make him reach away for him here!	Ni	Št	V	3D
	sa ₂ h[e ₂ -em-mu-n]a- ¹ ni-ib ₂ -du ₁₁	(<i>lištakšidaššum</i>)	let him make him reach away for him here!	Ni	Št	V	3D

Note that VIII§9, like the non-causative VIII§7, has an intransitive construction; the added /b/ references the intransitive subordinate subject. The other two paragraphs display the standard transitive subordinate subject /ni/. The double-m in VIII§9 would seem to indicate the presence of a separative /ba/, but this must be an error (or sloppy writing), the context of VIII§6-9 has the plain Akkadian Š-stem.

10.4.2 1st or 2nd person objects.

The remaining Ni-paragraphs are concerned with 1st and 2nd person objects. They contain several scribal errors or sloppy spellings, and they present serious interpretational problems. We begin with the 1st and 2nd person accusatives.

IX§19	s[a ₂ du ₁₁ -ga-m]u- ¹ un ¹	<i>ku-uš-da-an-ni</i>	reach me!	Ni	G		1A
	s[a ₂ ga-ra-ab]- ¹ du ₁₁	(<i>lušsudka</i>)	may I reach for you!	Ni	G		2A
	[sa ₂ ¹ [ha]- ¹ ra-ab-du ₁₁] ¹	(<i>lišsudka</i>)	may he reach for you!	Ni	G		2A

The Akkadian imperative has a clear 1st person accusative, but the Sumerian volative and precativ have 2nd person dative. From the Sumerian lines 2-3 one would expect du₁₁-ga-ma-ab in line 1, with a 1st person dative /ma/; du₁₁-ga-mu-ub would result in a causative interpretation, see the paragraphs discussed next. The -n of the Sumerian imperative in IX§19 is problematic. An analogous construction occurs in VI§17: gar-mu-un = *šu-uk-na-an-ni* = “place me!”, see the discussion in Section 12.3.

VIII§10	kas ₄ du ₁₁ -ga-mu-ub	<i>šu-ul-si₂-ma-an-ni</i>	make me run (here?)!	Ni	Š		1A
	kas ₄ ga-mu-ri-i[b ₂ -d]u ₁₁	(<i>lušalsimakka</i>)	let me make you run here!	Ni	Š	V	2A
	kas ₄ hu-mu-ri-ib ₂ - ¹ du ₁₁	(<i>lišalsimakka</i>)	let him make you run here!	Ni	Š	V	2A
IX§20	sa ₂ du ₁₁ -ga-mu- ¹ ub ¹	<i>šu-*ta-ak^{*25}-ši-da-ni</i>	make me reach!	Ni	Š		1A
	sa ₂ ga-ri-ib ₂ -du ₁₁	(<i>lušakšidka</i>)	let me make you reach!	Ni	Š		2A
	sa ₂ he ₂ -ri-ib ₂ -du ₁₁	(<i>lišakšidka</i>)	let him make you reach!	Ni	Š		2A

These two paragraphs are not exactly parallel. There is at least one scribal error, and they seem to be distorted by other scribal oversights. I believe that in VIII§10 ventive and non-ventive forms have been telescoped into a single paragraph (the second and third lines of the non-ventive version of VIII§10 should be analogous to the second and third lines of IX§20), and in IX the ventive counterpart of IX§20 has been omitted. The source of the problem may be that on the Akkadian side it is not possible to distinguish between ventive and non-ventive 1st person accusatives. On the Sumerian side

²⁴ Error, read *uk*.

²⁵ Error, read *uk*.

of the ventive version of VIII§10, the expected 1st person causative should have the morphology /du₄/-/m/-/mu/-/b/ and hence be spelled fully as du₁₁-ga-am₃-mu-ub, but the double-m might be contracted.

The following paragraphs are concerned with 1st and 2nd person Akkadian datives. First the non-causative forms:

VIII§11	¹ kas ₄ du ₁₁ -ga ¹ -[mu]-še	[lu-u]s-ma-am a-na ¹ še-ri-ya ¹	run toward me here!	Ni	G	V	1D
	¹ kas ₄ ga-mu-e-ši-ib ₂ -be ₂ ¹	(lulsumakkum?)	let me run toward you here!	Ni	G	V	2D
	¹ kas ₄ he ₂ -mu-e-ši-ib ₂ -be ₂ ¹	(lilsumakkum?)	let him run toward you here!	Ni	G	V	2D
IX§21	sa ₂ du ₁₁ -ga-mu-še ₃	ku-uš-dam a-na še-ri-ya	reach toward me here!	Ni	G	V	1D
	sa ₂ ga-mu-ra-ab-du ₁₁	(lukšudakkum?)	let me reach to you here!	Ni	G	V	2D
	¹ sa ₂ hu ¹ -mu-ra-ab- ¹ du ₁₁	(likšudakkum?)	let him reach to you here!	Ni	G	V	2D

Note the *marû*-base e in VIII§11 used for the volitive and the precativ, while the analogous paragraph IX§21 apparently uses the *hamtu*-base (for the *marû*-base one there would have expected the spelling -ra-ab-be₂ in the second and third line, in analogy to VIII§11). Note moreover the switch from the terminative /ši/ to the dative /ra/ inside of IX§21, and the switch from intransitive to transitive constructions in both paragraphs. In view of the *ana šēriya*, the expected morphology of the first lines of both paragraphs is /du₄/-/m/-/mu/-/ši/, that is ventive /m/ followed by the 1st person /mu/, and the single m of the text is an error or sloppy writing. The morphology of the second line of VIII§11 is /ga/-/m/-/e/-/ši/-/b/-/e/: volitive /ga/ + ventive /m/ + 2nd person pronoun /e/ + terminative /ši/ + direct object /b/ + *marû*-base /e/, and that of the second line of IX§21 is /ga/-/m/-/ra/-/b/-/du₄/.

Now the causative forms:

VIII§12	¹ kas ₄ du ₁₁ -ga-am ₃ -mu(?))-še-eb ₂ (?) ¹	¹ šu-ul-si ₂ ¹ -[ma-a]m a-na ¹ še-ri-ya ¹	make someone run toward me here!	Ni	Š	V	1D
	¹ kas ₄ ga ¹ -am ₃ -ma-r[i-ib ₂]-du ₁₁	(lušalsimakkum? or -ka?)	let me make someone run to you here!	Ni	Š	V	2D
	¹ kas ₄ he ₂ ¹ -am ₃ -ma- ¹ ri-ib ₂ ¹ -du ₁₁	(lišalsimakkum? or -ka?)	let him make someone run to you here!	Ni	Š	V	2D
			or: let him make you run here!				
IX§22	sa ₂ du ₁₁ -ga-mu-še-eb ₂ (!)	šu-uk-ši-dam <a-na še-ri-ya>	make someone reach toward me here!	Ni	Š	V	1D
	sa ₂ ga-mu-ri-ib ₂ -du ₁₁	(lušakšidakkum? or -ka?)	let me make someone reach to you here!	Ni	Š	V	2D
			or: let me make you reach here!				
	¹ sa ₂ hu ¹ -mu-ri-ib ₂ -du ₁₁	(lišakšidakkum? or -ka?)	let him make someone reach to you here!	Ni	Š	V	2D
			or: let him make you reach here!				

A comparison of VIII§11 and IX§21 with VIII§12 and IX§22 shows that all four imperatives are constructed intransitively. The non-causatives volitives and precatives in VIII§11 and IX§21 are constructed transitively, with a direct object /b/. But the causative volitives and precatives in VIII§12 and IX§22 are ambiguous. Either they are construed transitively, in which case /ri/ is a 2nd person subordinative, or they they are construed intransitively, in which case -ri- is to be interpreted as a locative-2. I lean toward the locative interpretation, but I cannot prove it. Note the switch from terminative /ši/ to locative-2 /ri/ inside both paragraphs. The double-m in the volitive and precativ forms of VIII§12 seems to suggest separative constructions (ventive /m/ + separative /ba/, so that the Akkadian in line 1 should be emended to an Št-form), but more likely, it merely is a sloppy(?) alternative spelling of the more common Sumerian orthography used in IX§22.

Note the emphatic idiom *ana šēriya* in VIII§11, 12 and IX§21, 22, which also is used in VII§3, 6, 36 and 39, all with 1st person imperatives and the terminative case.

10.5 OBT VIII + IX: comparative discussion of the indicative forms.

The grids underlying the indicative forms of these two paradigms are rather defective, see Sections 10.2 and 10.3. Again, I have somewhat arbitrarily rearranged the paragraphs into groups in order to facilitate the comparison between related forms of OBT VIII and IX.

10.5.1 Preterite tense, no object or 3rd person objects.

The morphological interpretation of most paragraphs is straightforward, see Section [10.1](#).

VIII§18	kas ₄ bi ₂ -in- ^r du ₁₁ ¹ kas ₄ ^r bi ₂ -du ₁₁ kas ₄ bi ₂ -du ₁₁	<i>il-sum</i> ₂ (<i>alsum</i>) (<i>talsum</i>)	he ran I ran you ran	Pt Pt Pt	G G G		
IX§27	sa ₂ bi ₂ -i[n-d]u ₁₁ sa ₂ b[i ₂ -du ₁₁] sa ₂ b[i ₂ -du ₁₁]	^r ik- ^r šu ¹ -ud (<i>akšud</i>) (<i>takšud</i>)	he reached I reached you reached	Pt Pt Pt	G G G		
IX§28	sa ₂ b[i ₂ -ib ₂ -du ₁₁] sa ₂ bi ₂ -i[b ₂ -du ₁₁ -en] sa ₂ bi ₂ -ib ₂ -[du ₁₁ -en]	[u ₂ -ša-ak]- ^r ši-id(!) (<i>ušakšid</i>) (<i>tušakšid</i>)	he(ø) made someone reached I made someone reached you made someone reached	Pt Pt Pt	Š Š Š		

Note the curious distinction between the non-causative construction bi₂-in-BASE with infix conjugation and the causative construction bi₂-ib₂-BASE with suffix conjugation. Presumably, the former is meant to be transitive, the latter intransitive. In the latter case, the intransitive subordinate subject (“someone”) is denoted by the b of -ib₂-. The same constructions, with the identical substitution of the bi₂-prefix for the i₃-prefix, occur also in OBGT VI, see the discussion of VI§37-39 in Section [9.4.2](#).

VIII§19	kas ₄ ^r mu-un-du ₁₁ kas ₄ mu-du ₁₁ kas ₄ mu-e-du ₁₁	<i>il-[s]u-ma-am</i> (<i>alsumam</i>) (<i>talsumam</i>)	he ran here I ran here you ran here	Pt Pt Pt	G G G	V V V	
IX§29	sa ₂ ma-an-du ₁₁ sa ₂ ma-du ₁₁ sa ₂ ma-du ₁₁	<i>ik-^ršu¹-dam</i> (<i>akšudam</i>) (<i>takšudam</i>)	he reached here I reached here you reached here	Pt Pt Pt	G G G	V V V	
IX§30	^r sa ₂ ma ¹ -ni-ib ₂ -du ₁₁ sa ₂ ma-ni-du ₁₁ sa ₂ ma-ni-du ₁₁	u ₂ -ša-ak- ^r ši-dam (<i>ušakšidam</i>) (<i>tušakšidam</i>)	somebody made someone reach here I made someone reach here you made someone reach here	Pt Pt Pt	Š Š Š	V V V	

Note that the ventive is written mu- in VIII§19, but ma- in IX§29-30.

IX§23	sa ₂ ba-an-du ₁₁ ^r sa ₂ ^r ba-du ₁₁ sa ₂ ^r ba ¹ -du ₁₁	<i>ik-ta-ša-ad</i> (<i>aktašad</i>) (<i>taktašad</i>)	he reached away I reached away you reached away	Pt Pt Pt	Gt Gt Gt		
IX§24	^r sa ₂ ba ¹ -ni-ib ₂ -du ₁₁ sa ₂ ^r ba-ni ¹ -du ₁₁ ^r sa ₂ ba ¹ -ni-du ₁₁	uš-ta-ak- ^r ši ¹ -id (<i>uštakšid</i>) (<i>tuštakšid</i>)	somebody(b) made someone(bi ₂) reach away I made someone reach away you made someone reach away	Pt Pt Pt	Št Št Št		
IX§38	sa ₂ im-ma-an-du ₁₁ sa ₂ im-ma-du ₁₁ sa ₂ im-ma-du ₁₁	<i>ik-ta-aš-da-am</i> <i>ak-ta-aš-da-am</i> (<i>takdašdam</i>)	he(n) reached away here I reached away here you reached away here	Pt Pt Pt	Gt Gt Gt	V V V	
IX§39	sa ₂ im-ma-ni-in-du ₁₁ sa ₂ im-ma-ni-du ₁₁ sa ₂ im-ma-ni-du ₁₁	uš-ta-ak- ^r ši-dam uš-ta-ak- ^r ši-dam (<i>tuštakšidam</i>)	he(n) made someone(bi ₂) reach away here I made someone(bi ₂) reach away here you made someone(bi ₂) reach away here	Pt Pt Pt	Št Št Št	V V V	

Note the difference between the impersonal subject /b/ in IX§24 and the personal subject /n/ in IX§39.

Also note the dissimilation bi₂ > ni in IX§30, IX§24 and IX§39.

IX§48	sa ₂ m[u-na-a]n-du ₁₁ ^r sa ₂ ^r m[u-n]a- ^r du ₁₁ ¹ ^r sa ₂ ^r [mu-n]a- ^r du ₁₁ ¹	<i>ik-šu-zum</i> (<i>akšuzum</i>) (<i>takšuzum</i>)	he reached for him I reached for him you reached for him	Pt Pt Pt	G G G		3D 3D 3D
IX§49	^r sa ₂ mu-na-ni ¹ -[ib ₂ -du ₁₁] ^r sa ₂ mu-na-ni-du ₁₁ ¹	[u ₂ -š]a-ak- ^r ši-zum (<i>ušakšizum</i>)	somebody made him reach for him I made him reach for him	Pt Pt	Š Š		3D 3D
IX§25	^r sa ₂ ^r ba-an-na-du ₁₁ [sa ₂] ba-na-du ₁₁ [sa ₂] ba-na-du ₁₁	<i>ik-ta-ša-az-zum</i> (<i>aktašazzum</i>) (<i>taktašazzum</i>)	he reached away for him I reached away for him you reached away for him	Pt Pt Pt	Gt Gt Gt		3D 3D 3D
IX§26	^r sa ₂ ba-na-ni ¹ -ib ₂ -du ₁₁ ^r sa ₂ ba-na-ni ¹ -ib ₂ -du ₁₁ ²⁶ ^r sa ₂ ba ¹ -na-ni-du ₁₁	uš-ta-ak- ^r ši-iz-zum (<i>uštakšizzum</i>) (<i>tuštakšizzum</i>)	somebody made him reach away for him I made him reach away for him you made him reach away for him	Pt Pt Pt	Št Št Št		3D 3D 3D

Note the metathesis ba-na-an-du₁₁ > ba-an-na-du₁₁ in IX§25.

²⁶ -ib₂- seems to be an error.

IX§40	sa ₂ im-ma-na-an-du ₁₁	<i>ik-ta-aš-da-aš-šum</i>	he reached away for him here	Pt	Gt	V	3D
	sa ₂ im-ma-na-du ₁₁	<i>(aktašdaššum)</i>	I reached away for him here	Pt	Gt	V	3D
	sa ₂ im-ma-na-du ₁₁	<i>(aktašdaššum)</i>	you reached away for him here	Pt	Gt	V	3D
IX§41	sa ₂ (!) im-ma-na-ni-ib ₂ -du ₁₁	<i>uš-ta-ak-ši-da-aš-šum</i>	someone made him reach away for him here	Pt	Št	V	3D
	sa ₂ im-ma-na-ni-du ₁₁	<i>(uštakšidaššum)</i>	I made him(ni) reach away for him here	Pt	Št	V	3D
	^r sa ₂ im ¹ -ma-na-n[i-d]u ₁₁	<i>(uštakšidaššum)</i>	you made him(ni) reach away for him here	Pt	Št	V	3D

All constructions are regular.

10.5.2 Preterite tense, 2nd person objects.

The forms with 2nd person objects present some noticeable features, in particular paragraphs with identical Akkadian but differing Sumerian renderings.

IX§44	sa ₂ i-ra-an-du ₁₁	<i>ik-šu(!)-ud-ka</i>	he(n) reached you	Pt	G		2A
	sa ₂ i-ra-du ₁₁	<i>(akšudka)</i>	I reached you	Pt	G		2A
IX§45	sa ₂ i-ri-ib ₂ -du ₁₁	<i>u₂-ša-ak-ši-id(!)-ka</i>	somebody(b) made you reach	Pt	Š		2A
	sa ₂ i-ri-du ₁₁	<i>(ušakšidka)</i>	I made you reach	Pt	Š		2A
IX§46	sa ₂ mu-ri-in-du ₁₁	<i>ik-šu-da-ka</i>	he(n) reached you here	Pt	G	V	2A
	sa ₂ mu-ri<-in>-du ₁₁	<i>(akšudakka)</i>	I reached you here	Pt	G	V	2A
IX§47	sa ₂ mu-ri-ib ₂ -du ₁₁	<i>u₂-ša-ak-ši-da-^rka¹</i>	somebody(b) made you reach here	Pt	Š	V	2A
	sa ₂ mu-ri-du ₁₁	<i>(ušakšidakka)</i>	I made you reach here	Pt	Š	V	2A
IX§31	sa ₂ ma-ra-an-du ₁₁	<i>ik-šu-da-ak-ka</i>	he(n) reached for you here	Pt	G	V	2A
	sa ₂ ma-ra-du ₁₁	<i>(akšudakka)</i>	I reached for you here	Pt	G	V	2A
IX§32	sa ₂ ma-ra-ni-ib ₂ -du ₁₁	<i>u₂-[ša]-ak-ši-da-ka</i>	someone(b) made him(ni) reach you(ra) here	Pt	Š	V	2A
	^r sa ₂ ma-ra ¹ -ni-d[u ₁₁]	<i>(ušakšidakka)</i>	I(ø) made him(ni) reach you(ra) here	Pt	Š	V	2A

The morphology – transitive constructions with infix conjugation – is straightforward. The use of the cases is curious. Akkadian uses the accusative throughout. Sumerian mostly uses a 2nd person dative /ra/, but in IX§46 a locative-2 /ri/. In IX§45 and §47 /ri/ is a 2nd person subordinative. Note the different Sumerian rendering of identical Akkadian forms: IX§46 vs. IX§31 and IX§47 vs. IX§32. But note that in IX§47 the Akkadian accusative refers to a subordinate subject (the person doing the reaching), in IX§32 to an indirect object (the person being reached). My English translations are tentative.

VIII§20	kas ₄ mu-ri-in-du ₁₁	<i>^ril¹-su-ma-[kum]</i>	he ran to you here	Pt	G	V	2D
	kas ₄ mu-ri-d[u ₁₁]	<i>(alsumakkum)</i>	I ran to you here	Pt	G	V	2D
VIII§21	^r kas ₄ im ¹ -ma-ri-[i-n-d]u ₁₁	<i>il-ta-as₂-ma(!)-[kum]</i>	he ran away to you here	Pt	Gt	V	2D
	^r kas ₄ im-ma ¹ -ri- ^r du ₁₁	<i>(altasmakkum)</i>	I ran away to you here	Pt	Gt	V	2D
IX§42	s[a ₂ im-m]a-ri-in-du ₁₁	<i>ik-ta-aš-da-kum</i>	he reached away for you here	Pt	Gt	V	2D
	sa ₂ i[m-m]a-ri-du ₁₁	<i>(aktašdakkum)</i>	I reached away for you here	Pt	Gt	V	2D

These three paragraphs must be contrasted with the following three, which present the corresponding causative forms:

VIII§22	^r kas ₄ ¹ mu-ri-ib ₂ -[du ₁₁]	<i>u₂-šal-si₂-ma-ku[m]</i>	he made someone run to you here	Pt	Š	V	2D
	^r kas ₄ mu-ri-ib ₂ ¹ -[du ₁₁ -en]	<i>(ušalsimakkum)</i>	I made someone run to you here	Pt	Š	V	2D
VIII§23	kas ₄ im-ma-r[i-ib ₂ -du ₁₁]	<i>^ruš-tal₂¹-si₂-ma-k[um]</i>	he made someone run away to you here	Pt	Št	V	2D
	kas ₄ im-ma-r[i-ib ₂ -du ₁₁ -en]	<i>(uštalsimakkum)</i>	I made someone run away to you here	Pt	Št	V	2D
IX§43	sa ₂ ^r im-ma-ri ¹ -ib ₂ -du ₁₁	<i>uš-ta-ak-ši-da-ka²⁷</i>	he made someone reach away for you here	Pt	Št	V	2D
	sa ₂ im-ma-ri-ib ₂ -du ₁₁ <-en>	<i>(uštakšidakkum)</i>	I made someone reach away for you here	Pt	Št	V	2D

The infixed -b- in the second lines of VIII§22 and IX§43 imply suffix conjugation, and hence the constructions are intransitive, the subordinate subject is /b/, and /ri/ must be a 2nd person locative-2. The use of the cases is interesting also here. Throughout the six paragraphs, Sumerian uses the 2nd person locative-2 /ri/. Akkadian uses the dative, confirming that /ri/ is not used as a subordinative.

²⁷ Perhaps error for -ka or -kum.

10.5.3 Present tense constructions.

The following paragraphs have present tense constructions.

VIII§13	¹ kas ₄ ab ¹ -be ₂ ¹ kas ₄ ¹ ab-be ₂ -en ¹ kas ₄ ab ¹ -be ₂ -en	<i>i-¹la¹-sum₂</i> (<i>alassum</i>) (<i>talassum</i>)	he runs I run you run	Ps Ps Ps	G G G		
IX§33	sa ₂ an-e ¹ sa ₂ an ¹ -e-en ¹ sa ₂ ¹ an-e-en	<i>i-ka-aš-ša-ad</i> <i>a-ka-aš-ša-ad</i> (<i>takaššad</i>)	he reaches I reach you reach	Ps Ps Ps	G G G		
VIII§15	kas ₄ am ₃ -me kas ₄ am ₃ -[m]e-en kas ₄ am ₃ -[m]e-en	<i>i-l[a-su-m]a-am</i> (<i>alassumam</i>) (<i>talassumam</i>)	he runs here I run here you run here	Ps Ps Ps	G G G	V V V	
IX§34	¹ sa ₂ ¹ am ₃ -e sa ₂ am ₃ -e-en sa ₂ am ₃ -e-en	<i>i-ka-aš-ša-dam</i> (<i>akaššadam</i>) (<i>takaššadam</i>)	he reaches here I reach here you reach here	Ps Ps Ps	G G G	V V V	

These four paragraphs are puzzling. We are not assisted by a systematic grid structure, and my interpretations correspondingly are somewhat tentative.

In the first line of VIII§13, we morphologically have /ã/-/b/-/e/-/e/, that is a transitive stative construction, with stative prefix /ã/, direct object /b/ referring to kas₄, *marû*-base /e/ and a contracted second /e/ referring to a transitive 3rd person subject. In the second and third line we have 1st and 2nd person subjects /en/.

In IX§33 we appear to have intransitive stative constructions: /ã/-/e/-/ø/, /ã/-/e/-/en/, /ã/-/e/-/en/.

One might be tempted to interpret the ventive versions VIII§15 and IX§34 also as statives, namely beginning with /ã/-/m/-, that is (prefix /ã/) + (ventive /m/). But the ventive /m/ never seems to be preceded by another prefix. Compare the analogous constructions VII§14: an-du = *illak* = “he goes”, which there is listed as an alternative to the regular VII§12: i₃-du = *illak*, and VII§16: am₃-du = *illakam* = “he comes”. Therefore, I believe that the construction of VIII§15 is meant to be transitive (/m/-/b/-/e/-/e/, with ventive /m/, assimilated /b/ referring to the direct object kas₄, *marû*-base /e/, and a contracted second /e/ referring to a transitive 3rd person subject), while in IX§34 we have intransitive /m/-/e/-/ø/, /m/-/e/-/en/, /m/-/e/-/en/. The writing am₃-e would seem to indicate a syllabic m followed by the vowel e (i.e. two syllables), possibly chosen to avoid the misleading monosyllabic spelling me-e.

VIII§14	¹ kas ₄ mu-ši-ib ₂ ¹ -be ₂ kas ₄ mu-ši-ib ₂ -be ₂ -en kas ₄ mu-ši-ib ₂ - ¹ be ₂ ¹ -en	<i>i-la-¹sum₂¹-šum</i> (<i>alassumšum</i>) (<i>talassumšum</i>)	he runs to him I run to him you run to him	Ps Ps Ps	G G G		3D 3D 3D
VIII§16	¹ kas ₄ am ₃ -ši ¹ -i[b ₂ -b]e ₂ [kas ₄] ¹ am ₃ -ši-ib ₂ ¹ -be ₂ -en ¹ kas ₄ ¹ am ₃ -ši-ib ₂ -be ₂ -en	<i>[i-la-s]u-ma-aš-šum</i> (<i>alassumaššum</i>) (<i>talassumaššum</i>)	he runs toward him here I run toward him here you run toward him here	Ps Ps Ps	G G G	V V V	3D 3D 3D

Note the distinction between non-ventive and ventive: in VIII§14 the morphology is /mu/-/n/-/ši/-/b/-/e/-/e/, where /mu/ is the conjugation prefix, while in VIII§16 it is /m/-/n/-/ši/-/b/-/e/-/e/, with /am₃/ representing the ventive.

IX§35	sa ₂ [m]u-e-a sa ₂ mu-e-a-en	<i>i-ka-aš-ša-da(!)-ka</i> (<i>akaššadakka</i>)	he reaches you here I reach you here	Ps Ps	G G	V V	2A 2A
IX§36	¹ sa ₂ im ¹ -mu-e-a sa ₂ im-mu-e-a-en	<i>ik-ta-aš-ša-da-ak-ka</i> (<i>aktaššadakka</i>)	he reaches you away here I reach you away here	Ps Ps	Gt Gt	V V	2A 2A

The morphology of §35 is supposed to be /m/-/e/-/a/-/e/-/ø/ and /m/-/e/-/a/-/e/-/en/, while in §36 we have /m/-/ba/-/e/-/a/-/e/-/ø/ and /m/-/ba/-/e/-/a/-/e/-/en/. Here the first /e/ is the 2nd person pronoun, /a/ is the locative morpheme, followed by the *marû*-base /e/ of du₁₁, the two contracted into a single /a/. Note that in distinction to OBT VII and the next example VIII§17 the present tense here uses the writing im-mu-, not am₃-mu-.

A comparison of IX§34: sa₂ am₃-e (/m/-/e/-/ø/, where the ventive /m/ is followed by the *marû*-base /e/) and IX§35: sa₂ mu-e-a (/m/-/e/-/a/-/e/-/ø/, where the ventive /m/ is followed by the 2nd person /e/) is

interesting. It suggests that the *marû*-base /e/ and the 2nd person /e/ phonetically are different. In Section 5 I had suggested that the 2nd person pronoun might hide an original *we. Note that the transitional vowel u is not conditioned by an immediately preceding ventive /m/, also /m/-ba/-e/ turns into mmue, as is shown by many forms occurring in OBG VII, such as VII§20: am₃-mu-e-ši-du = *it-ta-al-la-ka-ak-kum* = ‘‘he comes away to you’’, morphologically /m/-ba/-e/-ši/-du/.

VIII§17	kas ₄ am ₃ -mu-e-ši-ib ₂ -be ₂	<i>i-[(a-s)u-ma-ku[m]</i>	he runs away toward you here	Ps	G	V	2D
	kas ₄ am ₃ -mu-e-ši-ib ₂ -be ₂ -en	<i>(alassumakkum)</i>	I run away toward you here	Ps	G	V	2D

In view of the double m the Sumerian morphology appears to be /m/-/ba/-/e/-/ši/-/b/-/e/, but the Akkadian has G, not Gt. Either the Akkadian or the Sumerian seems to be in error.

The choice between transitive and intransitive constructions does not seem to follow any recognizable rules, see the grid structures displayed in Sections [10.2](#) and [10.3](#), and compare in particular VIII§13 and IX§33. Though, with the exception of IX§28 and IX§33 all intransitive examples of two-part verbs are construed with the ventive (but not all ventive forms are treated as intransitives).

10.5.4 A stative construction with infix conjugation.

OBTG IX contains an isolated paragraph with stative forms using infix conjugation:

IX§37	sa ₂ an-du ₁₁	<i>ka-ši-id(!)</i>	he had been reaching it	St	G		
	sa ₂ a-du ₁₁	<i>(kašdaku)</i>	I had been reaching it	St	G		
	sa ₂ e-du ₁₁	<i>(kašdata)</i>	you(e < ā-e) had been reaching it	St	G		

This is a remarkable case of a Sumerian stative with infix conjugation, that is, of a transitive preterite tense construction (note also the *hamtu*-base). The morphology is /ã/-/n/-/dug₄/, /ã/-/ø/-/dug₄/, /ã/-/e/-/dug₄/. See also the analogous construction in VI§35, mentioned in Section [9.4.1](#). These constructions should be compared to the present tense stative constructions occurring in VIII§13 and IX§33, see Section [10.5.3](#).

10.6 Dative or accusative?

In OBGT IX the verb $sa_2 \dots du_{11} = kašādum$ = “to reach” shows a curious use of cases. In standard Akkadian the person or thing to be reached is construed as a direct object in the accusative case. In Sumerian it is construed with sa_2 as the direct object, and the person to be reached is treated as an indirect object, mostly in the dative or locative. In particular, if that indirect object is 3rd person (in the Sumerian column construed throughout as a dative or locative), then it is treated as a 3rd person dative also in the Akkadian column.

Occasionally, also 2nd person objects are treated as Akkadian datives:

IX§42	s[a ₂ im-m]a-ri-in-du ₁₁	ik-ta-aš-da-kum	he reached away for you here	Pt	Gt	V	2D
-------	--	-----------------	------------------------------	----	----	---	----

But mostly, they are treated as Akkadian accusatives. Here is a listing of relevant occurrences, with a dative /ra/ in §31 and §44, a locative /a/ in §35 and §36 and a locative-2 /ri/ in §46:

IX§31	sa ₂ ma-ra-an-du ₁₁	ik-šu-da-ak-ka	he reached you here	Pt	G	V	2A
IX§35	sa ₂ [m]u-e-a	i-ka-aš-ša-da(!)-ka	he reaches you here	Ps	G	V	2A
IX§36	^r sa ₂ im ^l -mu-e-a	ik-ta-aš-<ša>-da-ak-ka	he reaches you away here	Ps	Gt	V	2A
IX§44	sa ₂ i-ra-an-du ₁₁	ik-šu(!)-ud-ka	he reached you	Pt	G		2A
IX§46	sa ₂ mu-ri-in-du ₁₁	ik-šu-da-ka	he reached you here	Pt	G	V	2A

There are only few 1st person examples. There is a clear terminative case combining with an Akkadian dative:

IX§21	sa ₂ du ₁₁ -ga-mu-še ₃	ku-uš-dam a-na še-ri-ya	reach toward me here!	Ni	G	V	1D
-------	---	-------------------------	-----------------------	----	---	---	----

In the other 1st person examples an Akkadian accusative pairs with an unclear Sumerian form, and the Akkadian accusative there might have been meant to reflect a Sumerian comitative, see the discussion in Section [12.3](#).

One wonders why the text vacillates between the use of Akkadian datives and accusatives. In particular there is no discernible reason for using the dative in IX§42, but the accusative in IX§46.

10.7 What did we gain from working through OBGT VIII and IX?

Because of the somewhat haphazard organization of the paradigms OBGT VIII and IX we were practically forced to discuss them paragraph-by-paragraph, paying attention to illuminating parallelisms between the two paradigms. In my opinion, the main insights we have gained from our tedious working through these two texts concern:

- (i) transitive and intransitive constructions of the same verb (VIII§6-9, discussed in Section [7.2](#)),
- (ii) fully conjugated present tense transitive constructions (discussed in Section [10.5.3](#)),
- (iii) use of -ea- for the 2nd person locative (in IX§35-36, discussed in Section [10.5.3](#)),
- (iv) use of the ablative case marker /ta/ as an alternative to the separative prefix /ba/ (in IX§11, see Section [9.4.4](#)),
- (v) splitting of /ri/ into two homophonous or homographic morphemes: a 2nd person subordinate subject and a 2nd person indirect object (see Section [6.3](#)),
- (vi) the phonological difference between the *marû*-base /e/, and the 2nd person pronoun /e/, when immediately preceded by the ventive /m/, documented by the writing am₃-e in IX§34 against mu-e-a in IX§35 (discussed in Section [10.5.3](#)),
- (vii) alternative spellings of -ma- and -mu- for the ventive (in VIII§5 and IX§8, and in VIII§19 and IX§29, with opposite choices in the two paradigms, see Section [12.4](#)).

11 N3513+N3592: a unilingual paradigm.

The unilingual paradigm N3513+N3592 is interesting, because it helps with the interpretation of the tenses. It covers forms of the verb *gen/du* = *alākum* and it comprises four columns (i) - (iv), all ventive with 1st and 2nd person objects: (i) plural objects, prefix /m/, (ii) plural objects, prefix /mma/, (iii) singular objects, prefix /m/, (iv) singular objects, prefix /mma/. In particular it offers a number of constructions with the negative prefixes *nu-* and *na-*.

We first note that, as illustrated in several passages of OBGT III, the Sumerian prefixes *nu-* and *na-* are mirrored by the Akkadian negative particles *ula* and *la*, respectively. Before verbs *ula* is a straight “not”, while *la* is used in a prohibitive sense:

III 86	ab-dim ₂ -me-en	<i>e-pi-eš</i>	I make it
87	nu-ub-dim ₂ -me-en	<i>u₂-la e-pi-eš</i>	I do not make it
88	ḥe ₂ -ib ₂ -dim-me	<i>li-pu-uš</i>	may he make it
89	na-ab-dim-me	<i>la i-pi-eš</i>	may he not make it

The Sumerian of III 86 seems to have a stative construction with prefix /ā/. Note also the 3rd person transitive suffix /e/, expected in III 89, but not in the precative III 88, see the remarks in Section 6.1.

It suffices to discuss column (iii) of N3513+N3592, ventive forms with singular 1st and 2nd person objects. Broken-off signs are not marked, since the other columns permit unambiguous restoration, see the complete listing in Appendix A.

	iii singular obj. — m		Person		Asp	Neg/ Proh
			Subj	Obj		
1	ga ₂ -am ₃ -mu-ši	come to me	2	1	Imp	
2	ga-mu-e-ši-gen	may I come to you	1	2	Vol	
3	am ₃ -mu-ši-du-u ₃ -un	you come to me	2	1	Ps	
4	mu-e-ši-du-un	I come to you	1	2	Ps	
5	na-am ₃ -mu-ši-du-un	may you not come to me	2	1	Ps	Proh
6	na-mu-e-ši-du-un	may I not come to you	1	2	Ps	Proh
7	nu-um-mu-ši-du-un	you do not come to me	2	1	Ps	Neg
8	nu-mu-e-ši-du-un	I do not come to you	1	2	Ps	Neg
9	i-im-mu-ši-gen-en	you came to me	2	1	Pt	
10	nu-um-mu-ši-gen-en	you did not come to me	2	1	Pt	Neg
11	mu-e-ši-gen-en	I came to you	1	2	Pt	
12	nu-mu-e-ši-gen-en	I did not come to you	1	2	Pt	Neg
13	i-im-mu-ši-gen	he came to me	3	1	Pt	
14	nu-um-mu-ši-gen	he did not come to me	3	1	Pt	Neg
15	mu-e-ši-gen	he came to you	3	2	Pt	
16	nu-mu-e-ši-gen	he did not come to you	3	2	Pt	Neg
17	am ₃ -mu-ši-du	he comes to me	3	1	Ps	
18	na-am ₃ -mu-ši-du	he may not come to me	3	1	Ps	Proh
19	nu-um-mu-ši-du	he does not come to me	3	1	Ps	Neg
20	mu-e-ši-du	he comes to you	3	2	Ps	
21	na-mu-e-ši-du	he may not come to you	3	2	Ps	Proh
22	nu-mu-e-ši-du	he does not come to you	3	2	Ps	Neg
23	ḥe ₂ -em-mu-ši-du	he may come to me	3	1	Prec	
24	ḥe ₂ -mu-e-ši-du	he may come to you	3	2	Prec	

The interesting fact is that the prefix *na-* is used with what we have called “present tense”, but is avoided with the “preterite tense”. Since you cannot prohibit a finished action, the conclusion is that the former tense refers to an unfinished or future action, the latter to a finished action.

12 Varia.

12.1 OBGT IV: more on *sa₂ ... du₁₁ = kašādum*.

A segment of OBGT IV nicely illuminates some insights we had gained from the main paradigms.

iii 2	sa ₂ ba-[a-du ₁₁]	[ak-ta-ša-ad]	I reached away	cf. IX§23
3	sa ₂ la-ba-a-d[u ₁₁]	[u ₂ -ul ak-ta-ša-ad]	I did not reach away	
4	sa ₂ ba-e-d[u ₁₁]	[ta-ak-ta-ša-ad]	you reached away	cf. IX§23
5	sa ₂ la-ba-e-d[u ₁₁]	[u ₂ -ul ta-ak-ta-ša-ad]	you did not reach away	
6	sa ₂ ab-be ₂ -e-ne	i-ka-a[š-ša-du]	they are reaching	cf. VIII§13 and IX§33
7	sa ₂ nu-ub-be ₂ -e-ne	u ₂ -ul i-k[a-aš-ša-du]	they are not reaching	
8	sa ₂ ba-an-ne-eš	ik-ta-aš-[du]	they had him reached away	
9	sa ₂ nu-un-ne-eš	u ₂ -ul ik-[šu-du]	they had him not reached	

iv 2	[sa ₂ am ₃]- ^r e ¹	i-ka-aš-ša-dam	he reaches here	cf. IX§34
3	[sa ₂ nu-um]- ^r e ¹	u ₂ -ul i-ka-aš-ša-dam	he does not reach here	
4	^r sa ₂ ¹ ab-du ₁₁	ka-ši-id ²⁸	someone had been reaching it	cf. IX§37

Note that in this paradigm the lines alternate between positive and negative statements. The Sumerian of lines iii 2-5 has regular preterite constructions with *ḥamṭu* base, with the infix referring to the singular subject; the invisible direct object is suffixed. Unfortunately the Akkadian is lost.

The Sumerian of lines iii 6-7 has *marû* base /e/ with suffixed plural subjects. The constructions are transitive (suffix /ene/), with an infix /b/ referring to the direct object sa₂. The Sumerian of these lines appears to have stative constructions (prefix /ā/), the Akkadian straight present tense.

Lines iii 8-9 are curious. The Akkadian side has straight Gt and G plural preterite forms; they could be either transitive or intransitive. In view of the suffix /eš/ the Sumerian side has plural intransitive constructions with base /e/, and the infixed /n/ thus ought to be a subordinate subject, suffering the action (presumed morphology /ba/-/n/-/e/-/eš/ and /nu/-/i₃/-/n/-/e/-/eš/, respectively). In view of the Akkadian preterite tense, one expects a *ḥamṭu* base on the Sumerian side, and according to modern grammars, the plural *marû* and *ḥamṭu* bases both are /e/. (My schematic rendering of the Sumerian /ba/ and the Akkadian t-stem by “away” may be convenient, but hardly is correct semantically, especially not in iii 8. Perhaps the t-stem means “to reach back”?)

²⁸ Text: šī-id-ka

12.2 OBG VIII: the paragraphs §24-38.

This section offers an unsystematic collection of forms of the verb *gu*₇ = *akālu* = to eat. Most paragraphs do not follow the standard convention, which varies the subject but leaves the other grammatical components constant.

VIII§24	[g]u ₇ -[a] ga-[gu ₇] ¹ he ₂ -[gu ₇]	[a]-ku- ¹ ul ¹ [lu]- ¹ ku ¹ -ul (likul)	eat! let me eat! let him eat!	Ni Ni Ni	G G G

VIII§38	[x x (x)]- ¹ gu ₇ (?)-e(?) ¹	[a(?)]- ¹ ak(?)-kal-ka(?) ¹		Ps	G		2A

The better preserved forms all seem to be unproblematic and constructed regularly. But note the identical Akkadian renderings of different Sumerian forms in §32-33 and in §34-35. Both §35 and §36 contain Sumerian statives, the first is rendered by an Akkadian present tense construction, (intransitive?), the second by an Akkadian stative (perhaps a transitive preterite – he was eating it?). Note VIII§28 and VIII§32, which give another example of bi₂-in-BASE versus bi₂-ib₂-BASE (see Sections [9.4.2](#) and [10.5](#)).

²⁹ Black p. 19.

12.3 Baffling forms: unclear 1st person Sumerian imperatives.

The paradigms, especially OBGT VIII and IX, contain a fair number of Sumerian and Akkadian forms whose interpretation is uncertain or ambiguous: either the morphology is unclear and possibly admits more than one interpretation, or, even if the morphology is clear, the paradigms may not suffice to establish the intended meaning in the absence of oral comments or of a sentence context. But I believe that by now almost all forms admit at least one convincing interpretation compatible with the assumed internal consistency of the paradigms under scrutiny, in particular the approximate semantic equivalence of corresponding Sumerian and Akkadian expressions, and the grammatical structures inferred from them.

As of now, only some imperatives with 1st person reference still are problematic and present baffling obstacles to my morphological understanding. These are contained in VI§17 and IX§19, and they must be discussed in the context of the paradigms. Note that OBGT X lacks counterparts to VI§17-18.

VI§17	gar-mu-un	<i>šu-uk-na-an-ni</i>	place me!	Ni	G		1A
	ga-e- ¹ da ¹ -gar	(<i>luškukka</i>)	let me place him/myself with you(e-da)!	Ni	G		2A

	sa ₂ ga-mu-ra-ab-du ₁₁	(<i>lušudakkum</i>)	let me reach to you here!	Ni	G	V	2D
	¹ sa ₂ h _u ¹ -mu-ra-ab- ¹ du ₁₁ ¹	(<i>likšudakkum</i>)	let him reach to you here!	Ni	G	V	2D

An Akkadian version is given only for the first lines of VI§17 and IX§19 and appears to have a clear 1st person accusative object: “place me!”, “reach me!”. Morphologically, the Akkadian 1st person accusative pronoun *-an-ni* is a ventive construction, but not necessarily so semantically. The accusative of VI§17 should also be compared to the ventive of VI§7: *gar-ma-ab* = *šuknam* = “place it here!” and the dative of VI§13: *gar-ma-ra* = *šuknam* = “place (it) for me!”.

Grammatically, the Sumerian of the first lines is far from clear. It does not seem to mirror the Akkadian version. In particular, the final *-n* seems to refer to an exceptional animate 3rd person direct object that lacks a counterpart in the Akkadian. We begin by trying to elucidate the first lines through analogy with the other lines.

The second and third lines of VI§17 presumably mean “let me/him place him with you!”, with the invisible direct object /n/ assimilated to *-gar*. It is also possible that they are meant reflexively: “let me/him place myself/himself with you!”. Note that the Sumerian comitative regularly is mirrored by the Akkadian accusative. Extrapolation to the first line then gives an expected Sumerian *gar-mu-da-an* or *gar-mu-da* “place him/yourself with me(mu-da)!”. Alternatively, the different form *gar-mu-un* of the text can be interpreted “place him here!”, with ventive /m/, which of course means practically the same. If this is so, the Akkadian 1st person accusative *šuknanni* then might be taken to mean “place (him) with me!”. However, the fact that *gar-mu-un* is placed in the *non-ventive* VI§17, rather than in

³⁰ Error for *-ka*?

³¹ read **uk**

³² Sic! This seems to be the only occurrence of *še₃* in these paradigms.

the *ventive* VI§18, argues against this interpretation, and in favor of a scribal error (read -mu-da for -mu-un).

The grammatical interpretation of the deceptively similar imperative in IX§19 is even more problematic. The Sumerian of the second and third line of IX§19 has a 2nd person dative object -ra-. Presumably, these forms should be interpreted as “may I/he reach you!”. Note that with *kašādum* a 2nd person Akkadian direct object mostly is mirrored by a Sumerian dative object (see Section 10.6). In the first line of IX§19, in analogy to the other two lines, one therefore would expect *sa₂ du₁₁-ga-ma-ab* = “reach me!”, with a 1st person dative /ma/ and a direct object /b/ referring to *sa₂*. Note that *du₁₁-ga-mu-ub* would result in a causative interpretation, as given in IX§20. An animate 3rd person direct object is not involved at all, and therefore the final -n in the first line does not seem to make sense. According to the photographs the Oriental Institute has made available to me, the surface of the tablet is heavily damaged, and possibly the word has been misread in MSL IV. One might be tempted to emend the reading of the final sign to -da and to assume that the Akkadian accusative *kušdanni* mirrors a Sumerian comitative *sa₂ du₁₁-ga-mu-da* (omitting the reference to the direct object *sa₂*), both meaning “reach with me!”.

A tempting interpretation, fitting both VI§17 and IX§19, as well as the Akkadian forms, is to assume that in both imperatives -m- renders a *ventive*, and that -n is meant as a 1st person direct object marker, borrowed from the /en/ of the *suffixed* pronoun series, perhaps in order to avoid the awkward void 1st person pronoun /ø/ of the *infix* series. The main arguments against this interpretation (and in favor of an error of the OB grammarian) are that the imperatives in question are placed in the non-ventive paragraphs, and that the Sumerian of the second and third lines treats the 2nd person not as a direct object, but uses oblique cases, the comitative and the dative. See also the last paragraph of Section 6.1 and compare the discussion of the direct object markers in Jagersma (2010: Section 15.2.3, p. 363)^[15].

12.4 The prefix /mu/, the ventive, and auxiliary vowels.

In distinction to the modern grammars the bilingual paradigms differentiate between the main conjugation prefix /mu/ and the *ventive* /m/. The former always is written mu- and never is mirrored by an Akkadian *ventive*. On the other hand, the Akkadian *ventive* always is mirrored by a Sumerian element containing an /m/. Confusingly, this *ventive* /m/ occasionally is spelled mu-. Note that there are distributional differences: the main prefix /mu/ occurs only with transitive indicative forms, but not with non-indicative forms.

In the grid of OBGT VI, with a transitive verb and infix conjugation, the section with indicative forms differentiates pointedly between the prefix /mu/, written mu-, and the *ventive* /m/, written ma-:

mu-:	mu-un-gar = <i>iškun</i>	= he put it	non-ventive (VI §44-49)
ma-:	ma-an-gar = <i>iškunam</i>	= he put it here	ventive (VI §66-71)

The identical differentiation between -mu- and -ma- occurs both in VI and in the parallel lines of X.

The Sumerian *ventive* /m/ can be complemented by a variety of vowels. In OBGT VII, with an intransitive verb and suffix conjugation, unwriteable (perhaps also unspeakable) consonant clusters involving the Sumerian *ventive* /m/ are resolved by a prefixed vowel: -am₃- in the present tense, -i-im- or -im- in the preterite. Here, -am₃- may simply be the cuneiform rendering of a vocalic m, while the i of -im- presumably is spoken. See Section 8.4 for more details.

Elsewhere the choice of vowels for resolving consonant clusters near a *ventive* /m/ looks haphazard. The non-indicative section of the same text VI oscillates between -am₃-, -em-, -ma- and -mu-. Here are a few selected excerpts. They not only show the oscillation between the vowels a and u, but also that in morphologically identical constructions sometimes the vowel is skipped and bi₂ is assimilated to a

preceding ventive *m* (as in IX§7, where the morphology is /dug₄/-/m/-/bi₂/-/b/), and sometimes it is separated from it by a vowel (as in VI§8 and X 8, where the morphology is /gar/-/m/-/bi₂/-/b/ and /gub/-/m/-/bi₂/-/b/ respectively):

VI§8	gar- ma -ni-ib ₂ ga- mu -ni-ib ₂ -gar ḥu- mu -ni-ib ₂ -gar	šu-uš-ki-nam (lušaškinam) (lišaškinam)	make someone(bi ₂ !) place it(b) here(m)! let me make someone(bi ₂ !) place it(b) here(m)! let him make someone(bi ₂ !) place it(b) here(m)!	Ni	Š	V	
VI§10	gar- ma -ni-ib ₂ ¹ ga- ma -ni-ib ₂ -[gar] ḥe ₂ - ma -ni-ib ₂ -[gar]	[šu-uš-ki-na-a]š-šu (lušaškinaššu) (lišaškinaššu)	make him(ni) place it(b) here(m)! let me make him(ni) place it(b) here(m)! let him make him(ni) place it(b) here(m)!	Ni	Š	V	3A
X 8	gub- mu -ni-ib ₂	šu-zi-iz-za-am	make someone(bi ₂ !) set it(b) up here(m)!	Ni	Š	V	
X 10	gub- ma -ni-ib ₂	šu-zi-iz-za-aš-šu	make him(ni) set it(b) up here(m)!	Ni	Š	V	3A
IX§7	sa ₂ du ₁₁ -ga- am ₃ - ¹ mi-ib ₂ ¹	¹ šu-uk-ši-dam ¹	make someone reach here!	Ni	Š	V	

The preference for *-mu-* in VI§8 and *-ma-* in VI§10 may be intentional (the *-ma-* in the first line of VI§8 may be an oversight). The two paragraphs have a different deep structure; the lack of an Akkadian *-šu* in VI§8 and parallelism to the non-ventive forms in VI§2 and §4 implies that in VI§8 the *-ni-* really is a dissimilated *-bi₂-*, see Section 9.2.3.

Hence, we might conjecture that /m/-/ni/-/b/ > *-ma-ni-ib₂*, but /m/-/bi₂/-/b/ > *-mu-ni-ib₂*. However, this conjecture is thrown in doubt by the following two paragraphs, where VIII uses *ma-* and IX *mu-* for morphologically identical forms:

VIII§5	kas ₄ du ₁₁ (!)-ga- ma -ni-ib ₂ kas ₄ ga- ma -ni-ib ₂ -du ₁₁ kas ₄ ḥe ₂ - ¹ ma -ni-ib ₂ -du ₁₁	šu-u[l]-si ₂ -ma-aš-šu (lušalsimaššu) (lišalsimaššu)	make him run here! let me make him run here! let him make him run here!	Ni	Š	V	3A
IX§8	sa ₂ du ₁₁ -ga- mu -ni-i[b ₂] sa ₂ ga- mu -ni-ib ₂ -[du ₁₁] ¹ sa ₂ ¹ ḥu- mu -ni-i[b ₂ -d]u ₁₁	[š]u-uk-ši-da-aš-šu (lušakšidaššu) (lišakšidaššu)	make him(ni) reach here! let me make him(ni) reach here! let him make him(ni) reach here!	Ni	Š	V	3A

What adds to the confusion, is that in the following two paragraphs the paradigms show opposite preferences: here, VIII uses *mu-* and IX *ma-* for morphologically identical forms:

VIII§19	¹ kas ₄ ¹ mu -un-du ₁₁ kas ₄ mu -du ₁₁ kas ₄ mu -e-du ₁₁	il-[s]u-ma-am (alsumam) (talsumam)	he ran here I ran here you ran here	Pt	G	V	
IX§29	sa ₂ ma -an-du ₁₁ sa ₂ ma -du ₁₁ sa ₂ ma -du ₁₁	¹ ik-šu ¹ -dam (akšudam) (takšudam)	he reached here I reached here you reached here	Pt	G	V	

Apparently, the confusing oscillation between *mu-*, *ma-* and other spellings concerns only the ventive. The conjugation prefix /mu/ consistently is written *mu-* and is mirrored by a non-ventive Akkadian form. It therefore ought to be kept separate from the occasional homographic combination of the ventive /m/ with the auxiliary vowel *u*, mirrored by an Akkadian ventive. The haphazard choice of vowels to be written or skipped near the ventive suggests that these vowels are weak or non-existent. Possibly the ventive /m/ in these paradigms was pronounced as a vocalic *m*.

Note that also in other contexts the choice of ancillary vowels looks arbitrary. After a naked imperative, the texts systematically add a vowel. Both tablets of the Ur recension use *-i-* (line 19: *geni* = *alík* = “go!”), while the OI recension systematically uses *-a-* (VII§7: *gen-na*, VI§1: *gar-ra*, X 1: *gub-ba*, and all 9 verbs of IX§50-58). In OBGT VI and X imperative forms consistently insert an *-a-* after the base, but not before a labial, see Section 9.1.1. Probably these vowels have no morphemic purpose and may correspond to a mere schwa.

12.5 On homography and homophony.

As a rule, the cuneiform writing system prevents us from separating homophony from homography. In the OB paradigms I am aware of only two instances where occasional spelling variations appear to indicate variances in pronunciation, and thereby make possible such a separation. Thus, the suffixed 1st and 2nd person pronouns both are spelled -en, except in one text, where the 2nd person is distinguished by the spelling -e-en (Section [6.1](#)). The 3rd person dative and the (conjunctural) locative both are spelled -na-, but occasionally, the dative is written with a double-n. Morphologically, the structure underlying the locative is the 3rd person marker /n/ followed by the locative marker /a/, while in the case of the dative /n/ is followed by the dative marker /ra/, assimilated n-ra > n-na > na (Section [6.3](#)).

In addition to the just mentioned /en/ and /na/, there are three other reasonably clear instances of homophony/homography: /bi₂/, /ri/ and /mu/.

The grammatical element /bi₂/ has two uses: as a subordinative impersonal subject marker and as a conjugation prefix. Apparently, the two can occur together and must be kept separate (Section [9.4.2](#)). Note that our texts seem to distinguish the spelling bi₂ from bi (for a rare occurrence of the latter see Section [4.2](#)).

The 2nd person pronoun /ri/ occurs in two uses: subordinate subject and locative-2 indirect object. According to their usage in the paradigms (Section [6](#)), subordinative subject and indirect object markers appear to belong to different “slots”, so the OB grammarians would regard the two /ri/ as homophonous rather than as identical (Section [6.3](#)).

The paradigms exhibit a clear separation between the conjugation prefix /mu/, the 1st person pronoun /mu/ and the ventive /m/, which also can be written mu (Sections [8.5](#) and [12.4](#)).

Spurious homophony can be caused by structural differences between Sumerian and Akkadian grammar. For example, transitive subjects, direct objects and intransitive subordinate subjects are kept separate in Akkadian, but may be identical from the point of view of ergative Sumerian (Section [6.1](#)). In this case, I believe that the OB grammarians were aware that the homophony was apparent only.

The prefix /ba/ has two seemingly disjoint meanings: separative and stative/passive. But maybe the semantic range of /ba/ is similar to that of the English “off”, namely implying a move out of the area of immediate control. If this is so, there would be identity between the two /ba/ rather than homophony. Possibly the OB grammarians shared this interpretation (Section [9.4.5](#)).

13 Summary and conclusions.

The paradigms under discussion give a surprisingly detailed comparison of Akkadian and Sumerian verbal morpho-syntax. Evidently, the OB grammarians considered the aspects and tenses (imperative, volitive, precative, stative, preterite and present tense) of Akkadian and Sumerian to be more or less coextensive – this is implicit in the grid structure of OBGT VI and VII. Though, there are substantial discrepancies between the Akkadian and the Sumerian notions of the stative (see Section 6.4). The paradigms nicely show that the Sumerian verbal system is split ergative (Sections 6.1 and 7). They give an admirably clear segmentation of the so-called conjugation prefixes (Sections 6.4 and 9.3), somewhat different from the still controversial modern views. The OB grammatical understanding conspicuously separates the prefix /mu/, the ventive /m/, and the 1st person pronoun /mu/ (Sections 8.5 and 12.4), and it even makes an effort to separate the 1st person dative and the ventive, which in Akkadian coincide (Section 9.2.1). With regard to the case system, the paradigms split the Akkadian dative into a Sumerian dative, terminative and locative (Section 6.3), and the Akkadian accusative into a Sumerian comitative (Section 6.3), ablative (Section 8.7) and subordinative (the latter concerning the subordinate subject, or underlying agent, of a causative construction, with an interesting differentiation between transitive and intransitive constructions, Sections 7.2 and 9.4.2). The paradigms document an interesting dissimilation of bi_2 to ni after labial + vowel (Section 9.2.3). They almost disentangle the thorny details of what Edzard (2003: 98)^[6] has called the “complex of directive and locative 2”, covering aspects of the subordinative and locative (Sections 6.2 and 6.3). It is remarkable that the paradigms seem to put special emphasis on precisely those aspects that still are controversial in modern Sumerian grammars. Apparently, they were regarded as difficult 4000 years ago. Were these questions controversial already then?

Appendix A

Sumerian Verbal Paradigms: The Texts.

Contents

OBGT VI.	Verbal Paradigm: gar = <i>šakānum</i> = to put	81
OBGT VII.	Verbal Paradigm: gen du re ₇ su ₈ = <i>alākum</i> = to go....	89
OBGT VIII.	Verbal Paradigm: kas ₄ ... du ₁₁ = <i>lasāmum</i> = to run	104
OBGT IX.	Verbal Paradigm: sa ₂ ... du ₁₁ = <i>kašādum</i> = to reach.....	108
OBGT X.	Verbal Paradigm: gub = <i>izuzzum, uzuzzum</i> = to stand ..	114
N3513+N3592.	Unilingual Paradigm: gen du = <i>alākum</i> = to go.....	117

The grammatical texts OBGT VI-X cover verbal paradigms for various types of verbs:

- an intransitive verb (OBGT VII: gen | du | re₇ | su₈ = *alākum* = “to go”),
- transitive verbs (OBGT VI: gar = *šakānum* = “to put”, and OBGT X: gub = *izuzzum* = “to stand”, here also treated transitively: “to set up”),
- composite transitive verbs (OBGT VIII: kas₄ ... du₁₁ = *lasāmum* = “to run”, and OBGT IX: sa₂ ... du₁₁ = *kašādum* = “to reach”, where kas₄ and sa₂ are treated as direct objects of the auxiliary verb du₁₁; roughly “to do a running”, “to do a reaching”).

Some of the texts fill the space remaining at the end of the tablet with forms belonging to miscellaneous other verbs.

The transliterations are based on MSL IV (1956), utilizing some corrections by Black (1991). A few erroneous restorations were corrected. The English translations often are very tentative.

The unilingual paradigm N3513+N3592 is taken from Black (1991: 155-158).

The Oriental Institute texts (A24185 to A24189) comprise the following number of lines:

OBGT VI	= A24187	227
OBGT VII	= A24189	318
OBGT VIII	= A24188	91
OBGT IX	= A24185	163
OBGT X	= A24186	74
total		873

Among the five texts, OBGT VII is very tightly organized, OBGT VI and X are somewhat less so, and OBGT VIII and IX are the least disciplined.

I believe now to understand practically everything of OBGT VII, apart from minor phonetical or graphical problems. There are a few more open problems in the paradigms VI and VIII-X, but I believe to have now understood the syntax (but not necessarily the semantics) of almost all forms.

The following streamlined listings of the texts originally had been prepared as a prerequisite for the structural analysis on the basis of MSL IV (1956) and Black (1991). I numbered the paragraphs, added tentative translations and gave preliminary determinations of the morphological structures. While the structural analysis, as given in the rightmost columns, ordinarily reflects the Akkadian forms and should suffice to explicate their meanings, the translations try to render the Sumerian ones, which often are more detailed. Later on, repeated efforts were made to update and correct these listings in view of the results emerging from my analysis of the paradigms, but I am sure that some oversights have remained.

OBGT VI. Verbal Paradigm:gar = *šakānum* = to put

Column 1 gives the line number 06Nxxx according to the publication in MSL IV, OBGT VI.

Column 2 gives the paragraph number.

Column 3 gives the Sumerian forms.

Column 4 gives the Akkadian forms.

Column 5 gives my suggested translation (which sometimes is tentative).

Columns 6-9 give my morphological analysis. They generally reflect the Akkadian forms.

Column 6: aspect (Non-indicative, Present, Preterite, Stative)

Column 7: the Akkadian stem (G, Gt, N, Nt, Š, Št)

Column 8: ventive or non-ventive (V or blank)

Column 9: person of the object and case (Dative or Accusative, blank if there is no object)

Inserts are highlighted.

06N000	OBGT	Sumerian	Akkadian	Suggested translation of the Sumerian forms	Asp	Stem	Vent	Obj
06N001	VI§1	gar-ra	<i>šu(!)-^rku¹-un</i>	place (it, or yourself?)!	Ni	G		
06N002	VI§1	ga-gar	<i>lu-uš-ku-un</i>	let me place (it, or myself?)!	Ni	G		
06N003	VI§1	ḥe ₂ -gar	<i>li-^riš¹-ku-un</i>	let him place (it, or himself?)!	Ni	G		
06N004	VI§2	gar-bi ₂ -ib ₂	<i>^ršu¹-uš-ki-in</i>	make someone(bi ₂) place it(b)!	Ni	Š		
06N005	VI§2	ga-bi ₂ -ib ₂ -gar	<i>lu-ša-aš-ki-in</i>	let me make someone place it!	Ni	Š		
06N006	VI§2	ḥe ₂ -bi ₂ -ib ₂ -gar	<i>li-š[a-aš-ki-in]</i>	let him make someone place it!	Ni	Š		
06N007	VI§3	gar-ra-an-da	<i>[šu-ku-uš-šu]</i>	place (it, or yourself?) with him(n-da)!	Ni	G		3A
06N008	VI§3	ga-an-da-gar	<i>[lu-uš-ku-uš-šu]</i>	let me place (it, or myself?) with him!	Ni	G		3A
06N009	VI§3	ḥe ₂ -en-da-gar	<i>[li-iš-ku-uš-šu]</i>	let him place (it, or himself?) with him!	Ni	G		3A
06N010	VI§4	gar-ra-ni-ib ₂	<i>[šuškiššu]³³</i>	make him(ni) place it(b)!	Ni	Š		3A
06N011	VI§4	ga-ni-ib ₂ -gar	<i>[lušaškiššu]</i>	let me make him place it!	Ni	Š		3A
06N012	VI§4	ḥe ₂ -ni-ib ₂ -gar	<i>[lišaškiššu]</i>	let him make him place it!	Ni	Š		3A

³³ Restoration of the pronoun is certain in view of the parallelism of §§1-6 with §§7-12 (non-ventive versus ventive forms); §10 has gar-ma-ni-ib₂ = [*šu-uš-ki-na-a*]š-šu.

⁵⁴ The Akkadian may have to be interpreted as *šaknam+kum*. The ventive is only in the Akkadian.

⁵⁵ The Akkadian may have to be interpreted as *šaknaku+kum*.

⁵⁶ Note the use of i rather than i₃.

⁵⁷ Irregular paragraph structure. With Black p. 29 I have interchanged the Sumerian of the lines 218 and 220. The parallel paragraphs VI§74 and VI§75 make it clear that an infixed /n/ belongs into the first, but not into the third line; the third line is parallel to the first line of VI§65.

⁵⁸ The single š may be an error; this paragraph probably continues the N-stem passives of §77-79.

OBGT VII. Verbal Paradigm: gen | du | re₇ | su₈ = *alākum* = to go

Column 1 gives the line number 07Nxxx according to the publication in MSL IV, OBGT VII, and the line number 07Uxxx according to UET 7. For the latter numbering see Black (1991: 137-143), right hand side. UET 7,100 ranges from U001-U083, UET 7,101 from U001-U190. If the two UET texts agree (or seem to agree), I give the better preserved one. If not, I give first 101, then 100.

Column 2 gives the paragraphs numbered in the sequence of OBGT VII; note that there are some differences between the ordering in OBGT VII and the UET texts.

Column 3 gives the Sumerian forms.

Column 4 gives the Akkadian forms.

Column 5 gives my suggested translation (which sometimes is tentative).

Columns 6-11 give my morphological analysis. They reflect the Akkadian forms, with the exception of a few forms where Sumerian statives are rendered by the Akkadian present tense.

Column 6: person of the object and case (Dative or Accusative, blank if there is no object)

Column 7: the Akkadian stem (G or Gt)

Column 8: ventive or non-ventive (V or blank)

Column 9: aspect (Non-indicative, Present, Preterite, Stative)

Column 10: number of subject (Singular or Plural)

Column 11: number of object (Singular or Plural, blank if there is no object)

Inserts are highlighted.

OBGT VIII. Verbal Paradigm: kas₄ ... du₁₁ = *lasāmunum* = to run

Column 1 gives the line number 08Nxxx according to the publication in MSL IV, OBGT VIII.

Column 2 gives the paragraph number.

Column 3 gives the Sumerian forms.

Column 4 gives the Akkadian forms.

Column 5 gives my suggested translation (which sometimes is tentative).

Columns 6-9 give my morphological analysis. They generally reflect the Akkadian forms.

Column 6: aspect (Non-indicative, Present, Preterite, Stative)

Column 7: the Akkadian stem (G, Gt, N, Nt, Š, Št)

Column 8: ventive or non-ventive (V or blank)

Column 9: person of the object and case (Dative or Accusative, blank if there is no object)

08N043	VIII§15	kas ₄ am ₃ -me	<i>i-l[a-su-m]a-am</i>	he runs here	Ps	G	V	
08N044	VIII§15	kas ₄ am ₃ -[m]e-en	<i>(alassumam)</i>	I run here	Ps	G	V	
08N045	VIII§15	kas ₄ am ₃ -[m]e-en	<i>(talassumam)</i>	you run here	Ps	G	V	

⁶² Note that the -b- referencing the direct object kas₄ is absent.

⁶³ The double-m seems to be an error, the context of §6-9 requires the plain Š-stem.

⁶⁴ Why *marû*-base?

⁶⁵ Which is intended: du₁₁ or e?

⁶⁶ The Sumerian seems to have -ba-, the Akkadian G, not Gt. Error?

⁶⁷ Erroneous duplication of the preceding line.

⁶⁸ The traces of -ib₂- imply suffix conjugation, despite the infix conjugation in §20.

⁶⁹ Black p. 19.

OBGT IX. Verbal Paradigm: $sa_2 \dots du_{11} = kašādum = \text{to reach}$

Column 1 gives the line number 09Nxxx according to the publication in MSL IV, OBGT IX.

Column 2 gives the paragraph number.

Column 3 gives the Sumerian forms.

Column 4 gives the Akkadian forms.

Column 5 gives my suggested translation (which sometimes is tentative).

Columns 6-9 give my morphological analysis. They generally reflect the Akkadian forms.

Column 6: aspect (Non-indicative, Present, Preterite, Stative)

Column 7: the Akkadian stem (G, Gt, N, Nt, Š, Št)

Column 8: ventive or non-ventive (V or blank)

Column 9: person of the object and case (Dative or Accusative, blank if there is no object)

09N077	IX§26	ṣa ₂ ba-na-ni ¹ -ib ₂ -du ₁₁ ⁷⁹	(uštakšizzum)	I made him reach away for him	Pt	Št		3D

⁷⁵ Expected du₁₁-ga-ma-ab (du₁₁-ga-mu-ub would result in a causative interpretation, see the next paragraph). The -n is unexplained. Probably error.

⁷⁶ read *uk*

⁷⁷ Sic! This seems to be the only occurrence of še₃ in these paradigms.

⁷⁸ Error for ba-na-an-du₁₁.

OBGT X. Verbal Paradigm: *gub* = *izuzzum*, *uzuzzum* = to stand

Column 1 gives the line number 10Nxxx according to the publication in MSL IV, OBGT X.

Column 2 gives the paragraph number of the corresponding paragraph in OBGT VI.

Column 3 gives the Sumerian forms.

Column 4 gives the Akkadian forms.

Column 5 gives my suggested translation (which sometimes is tentative).

Columns 6-9 give my morphological analysis. They generally reflect the Akkadian forms.

Column 6: aspect (Non-indicative, Present, Preterite, Stative)

Column 7: the Akkadian stem (G, Gt, N, Nt, Š, Št)

Column 8: ventive or non-ventive (V or blank)

Column 9: person of the object and case (Dative or Accusative, blank if there is no object)

Note that some paragraphs of OBGT VI lack a corresponding line in OBGT X: VI§17-18, §22-28, §31, §56-57, §64-65, §72, §78-80. VI§31 seems to be an accidental omission, perhaps also §17-18 and §72, the other gaps correspond to inserts of OBGT VI.

⁹² Error for *iz-zi-za-aš-šum*.⁹³ Error for *uš-zi-za-aš-šum*.⁹⁴ Note the use of i rather than i₃.

Taken from Black (1991: 155-158). In col. iv, lines 13-22 are messed up: l. 13 and 14 are duplicated: l. 13 = l. 19 and l. 14 = l. 17. Below, the forms to be expected in lines 13 and 14 are restored, in the text they are lacking. To agree with the ordering of the first three columns, lines 15 to 22 should be listed in order 16, 15, 19, 17, 18, 22, 20, 21, as given in the listing below. In the final columns, the persons and aspects (Imperative, Volitive, Present, Preterite, Precative) are given, and whether the form is Negative or Prohibitive.

Appendix B

Synthetic reconstruction of the morphology of OBGT VII.

See Section 8.3; the Akkadian and Sumerian morphology columns were created by a computer program. The plural locative marker is written a in imperative forms, ° elsewhere.

Column 1 gives line numbers of the synthetic reconstruction.

Column 2 gives the paragraph numbers of the OI recension of OBGT VII.

Column 3 gives the line numbers of the OI and the UET versions (as in Appendix A).

Column 4 gives the computer reconstruction of the Sumerian morphology.

Columns 5-7 are taken from Appendix A.

Columns 8-14 give the computer reconstruction of the Akkadian morphology (see Section 8.3).
